The ALICE Global Redirector. A step towards real storage robustness.

Wednesday 5 November 2008 14:50 (25 minutes)

In this talk we address the way the ALICE Offline Computing is starting to exploit the possibilities given by the Scalla/Xrootd repository globalization tools. These tools are quite general and can be adapted to many situations, without disrupting existing designs, but adding a level of coordination among xrootd-based storage clusters, and the ability to interact between them.
