

Some quotes about Iran CMS Virtual Visit:

“Regarding the importance of this great experiment in particle physics, such virtual visits play a crucial role in increasing the excitement in doing physics’ research especially for BSc students. More especially, students saw some Iranian researchers working at CERN. I hope we will have such visits in future for more and different students so that more people can benefit.”

Behzad Sabeti – Graduate student in Physics

“Virtual visit of CMS was very exciting for me as a physics student. I’m sure, it could be exciting for everyone. Thanks ever so much for this wonderful visit, I really appreciate it. I hope that we have other CERN virtual visits.”

Mehdi Hashemi – MSc student in Physics

“I got very excited in this wonderful event. As an engineering student, I realized that CERN project is a masterpiece of systems engineering and I am very eager to know more about it.”

Ehsan Arasteh - BSc in Aerospace Engineering

“It would be better if the visit was at the time that the detector was not closed so that we could see the inner parts. However, the visit was really nice especially that it was in our language. Thank you for the visit. I was interested to see how CERN is and what people are doing there.”

Maede Seyedolmohadesin – BSc student in physics

“Webcam communication removed a lot of ambiguities about your activities in my mind. But I liked to know more about the materials used in different parts of the detectors and tunnels in order to sustain the experiment's conditions.”

Hossein Mousavi – BSc in Mechanical Engineering

“The virtual visit was really wonderful and can attract interested students in particle physics. It will be very good if we have more and more connections with CERN in future.”

Taha Jamshidi – BSc in Physics
