## THttpServer class in ROOT

*Friday, September 18, 2015 11:00 AM (20 minutes)*

THttpServer class in ROOT implements http server for arbitrary ROOT-based application. It is based on Civetweb embeddable http server and provides direct access to all registered for the server objects. THttpServer also supports FastCGI interface and therefore can be integrated with many standard web servers like Apache.

Presentation will focus on ‘advanced’ features of THttpServer:

- object methods execution
- command interface
- access control
- support of custom user classes

Online documentation and examples can be found on <https://root.cern.ch/js/> and <http://web-docs.gsi.de/~linev/js/>
