THE HMPID DETECTOR

Operating principle

Radiator:

15 mm C_6F_{14} - $n=1.3$ @ 170 nm

Photon detector:

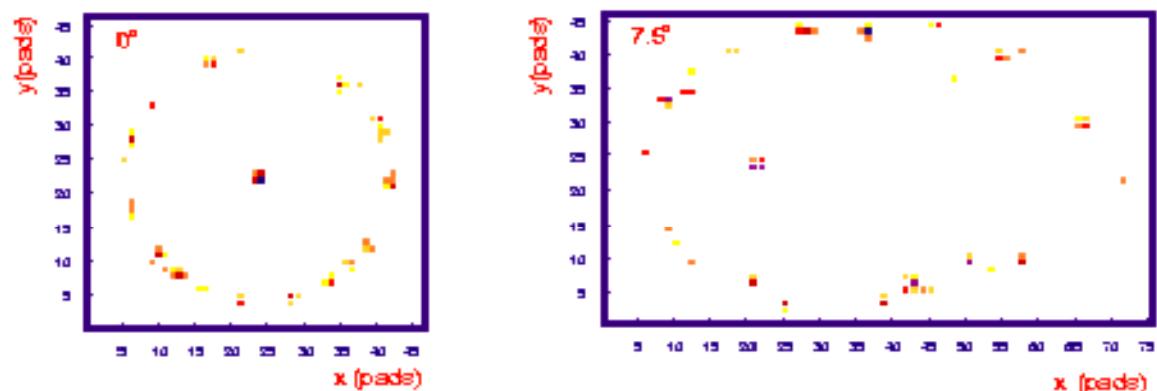

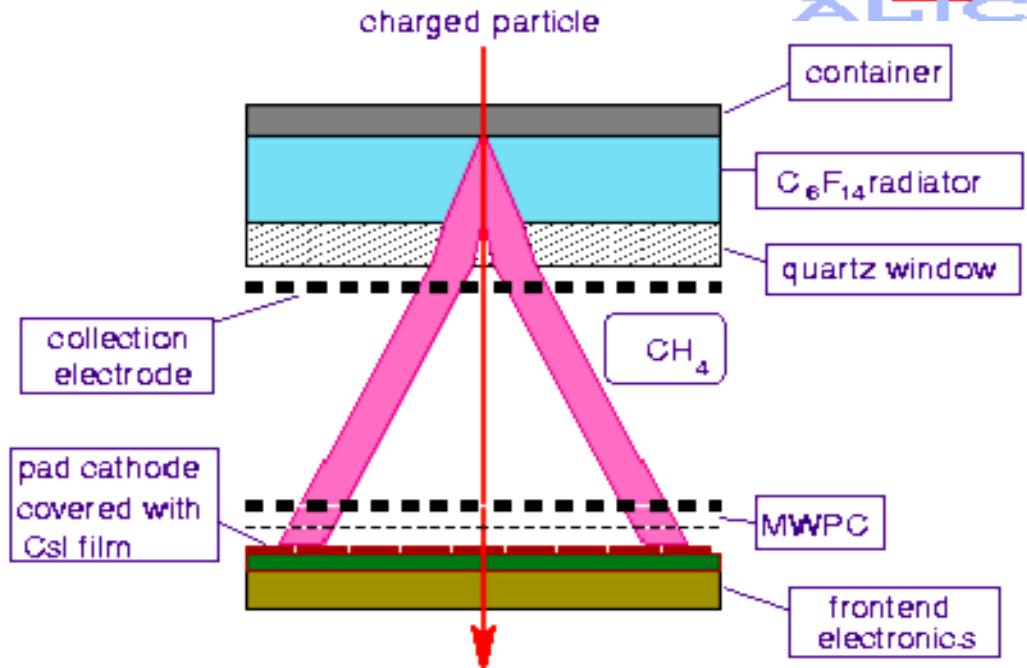

- MWPC with CH_4 at atmospheric pressure (4 mm sensitive gap)
- analogue pad readout

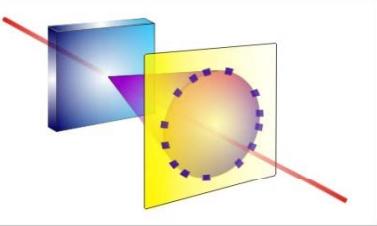

Photon converter:

Reflective layer of CsI
(QE= 23% @ 170 nm)

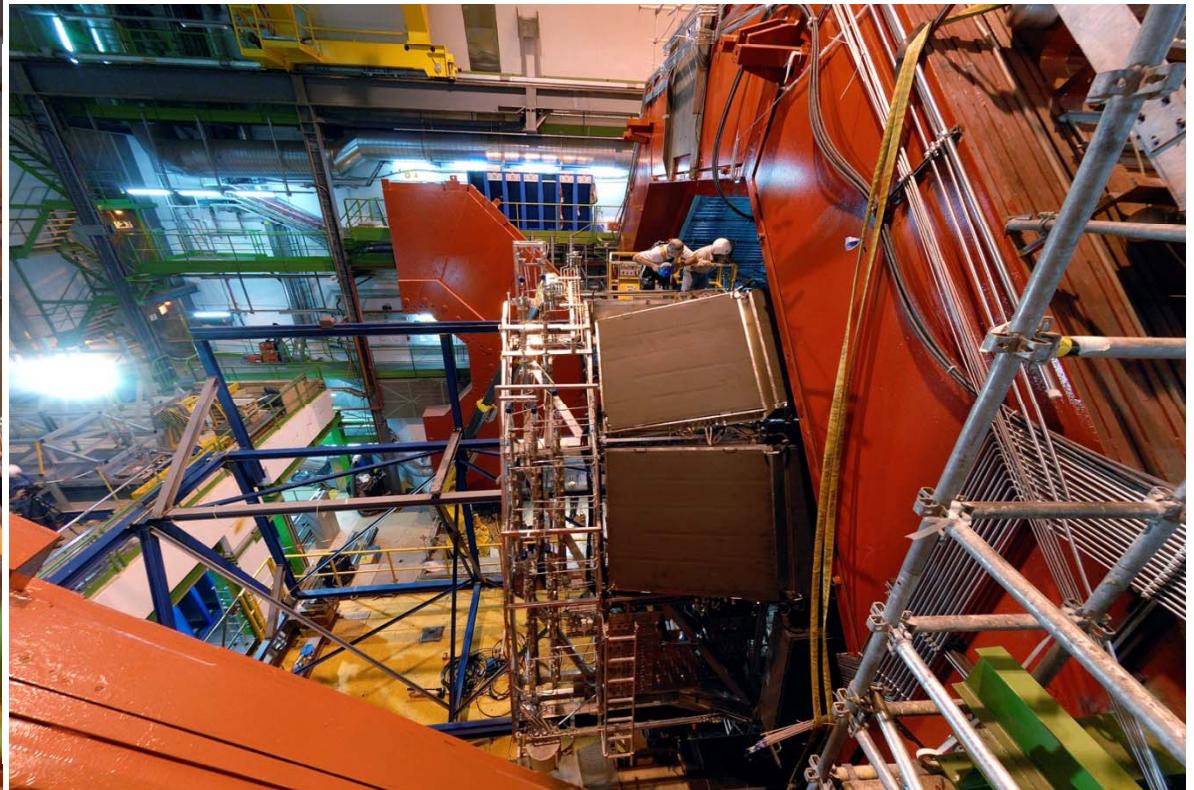

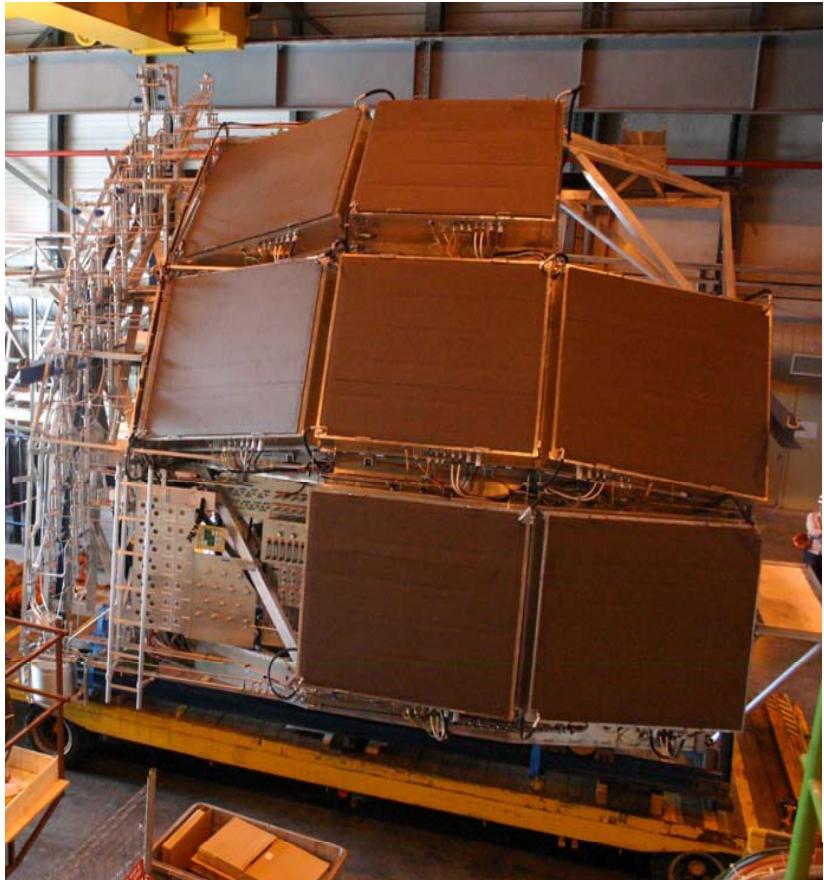

PID range:

- $1 < p < 3 \text{ GeV}/c \pi K$
- $2 < p < 5 \text{ GeV}/c p$

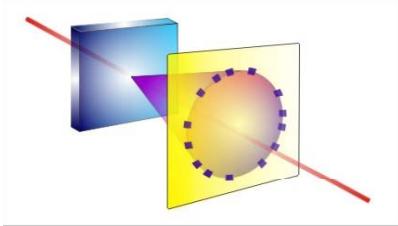

Detector Layout

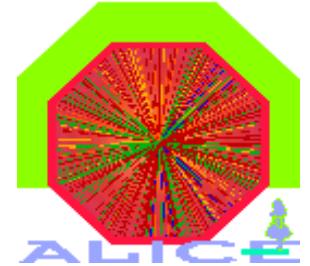

7 modules, each $\sim 1.5 \times 1.5 \text{ m}^2$

3 radiator trays, 6 photo-cathodes, 23'040 pads

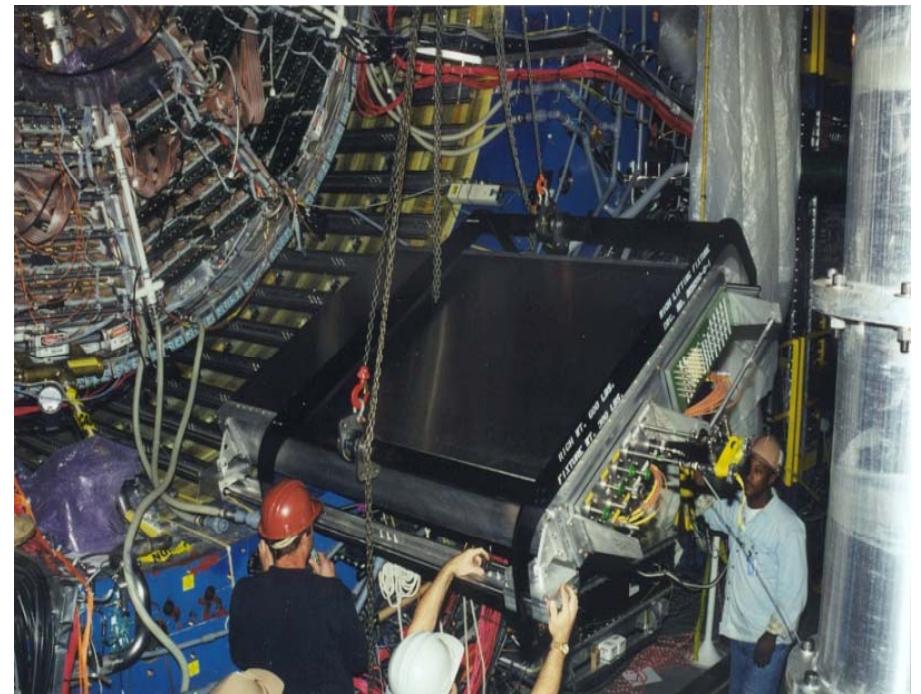

Total CsI area $\sim 11 \text{ m}^2$

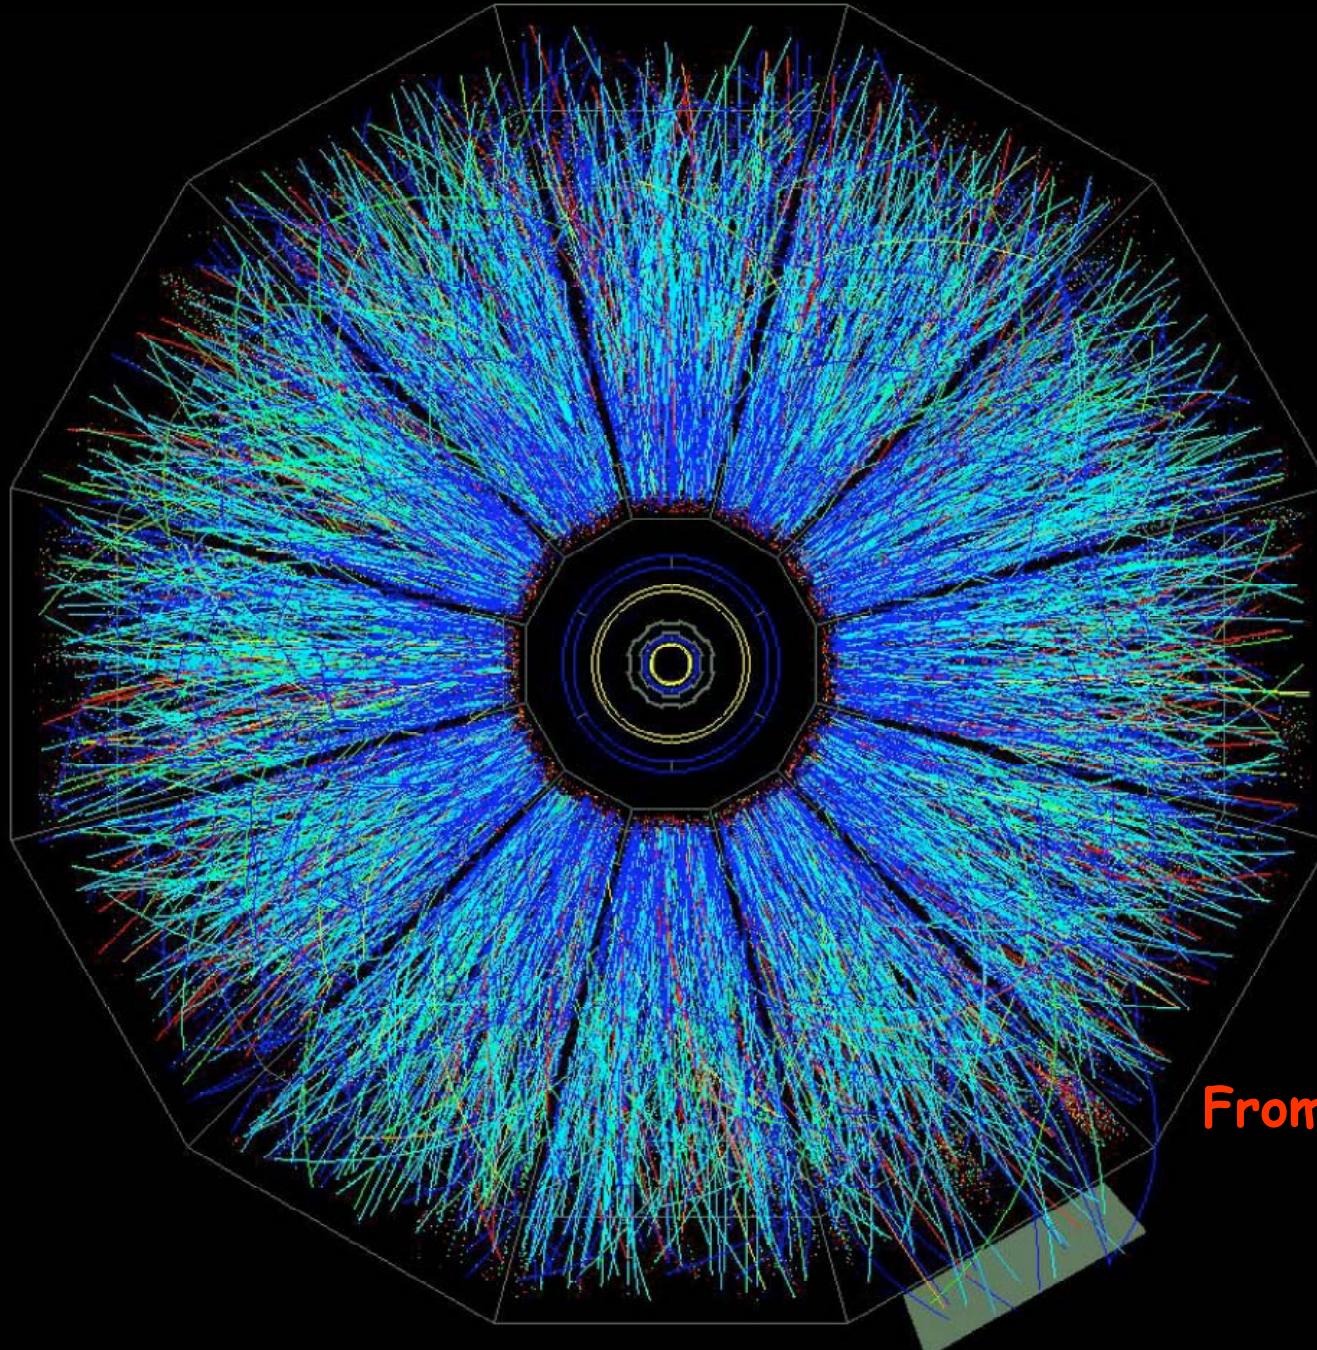

R&D ACTIVITIES

- CsI based photo-cathodes (PC)
(RD26)
- Detector prototypes :
Proto-1
Proto-2 → STAR-RICH @ BNL
Proto-3
- Front-End electronics
 - A lot of work done also on the radiator, the C_6F_{14} circulation system etc.

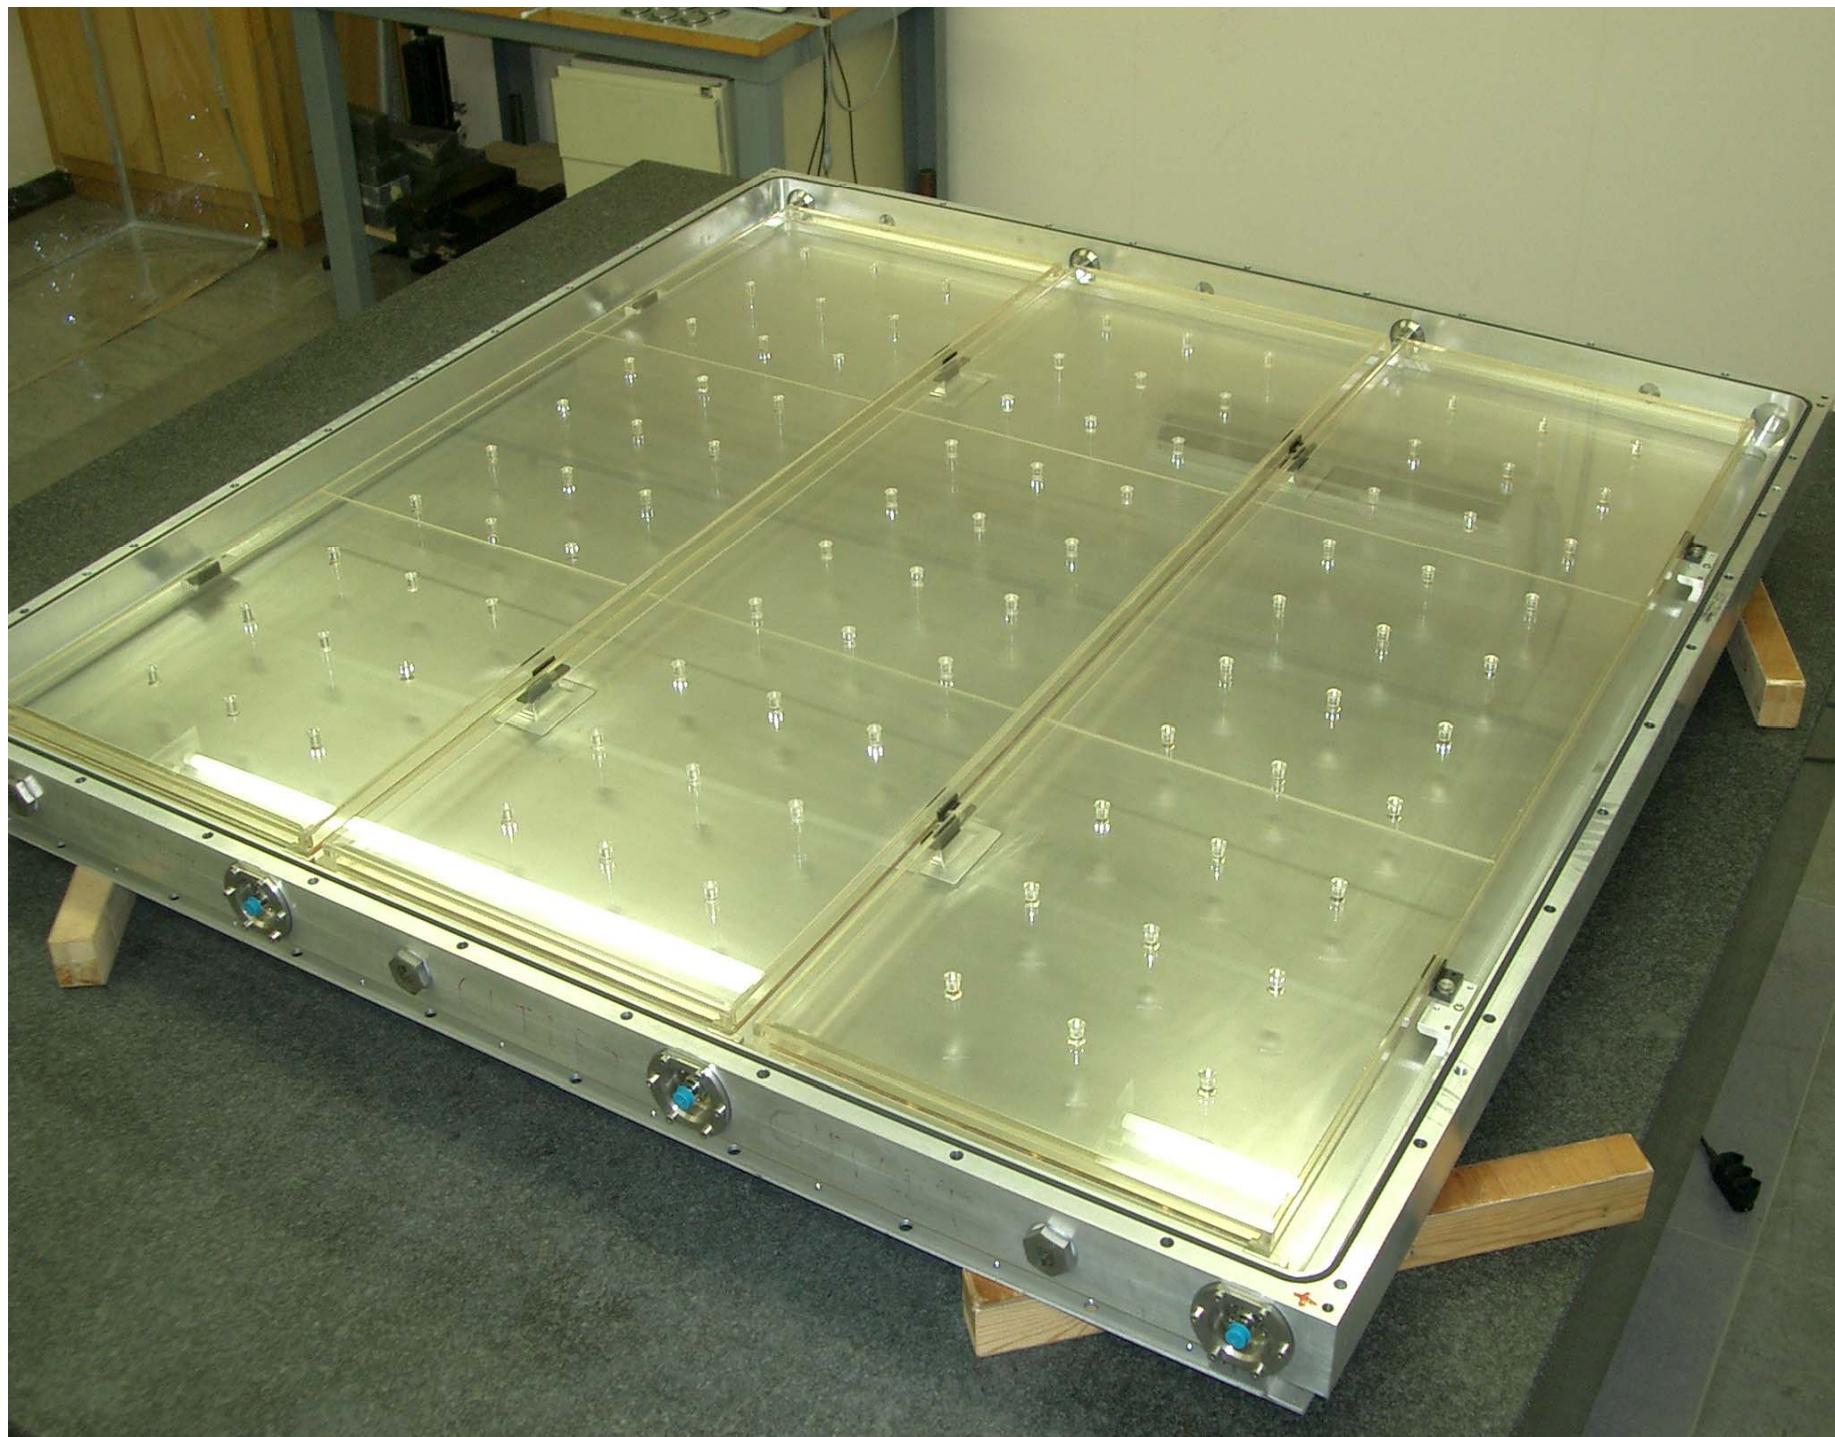

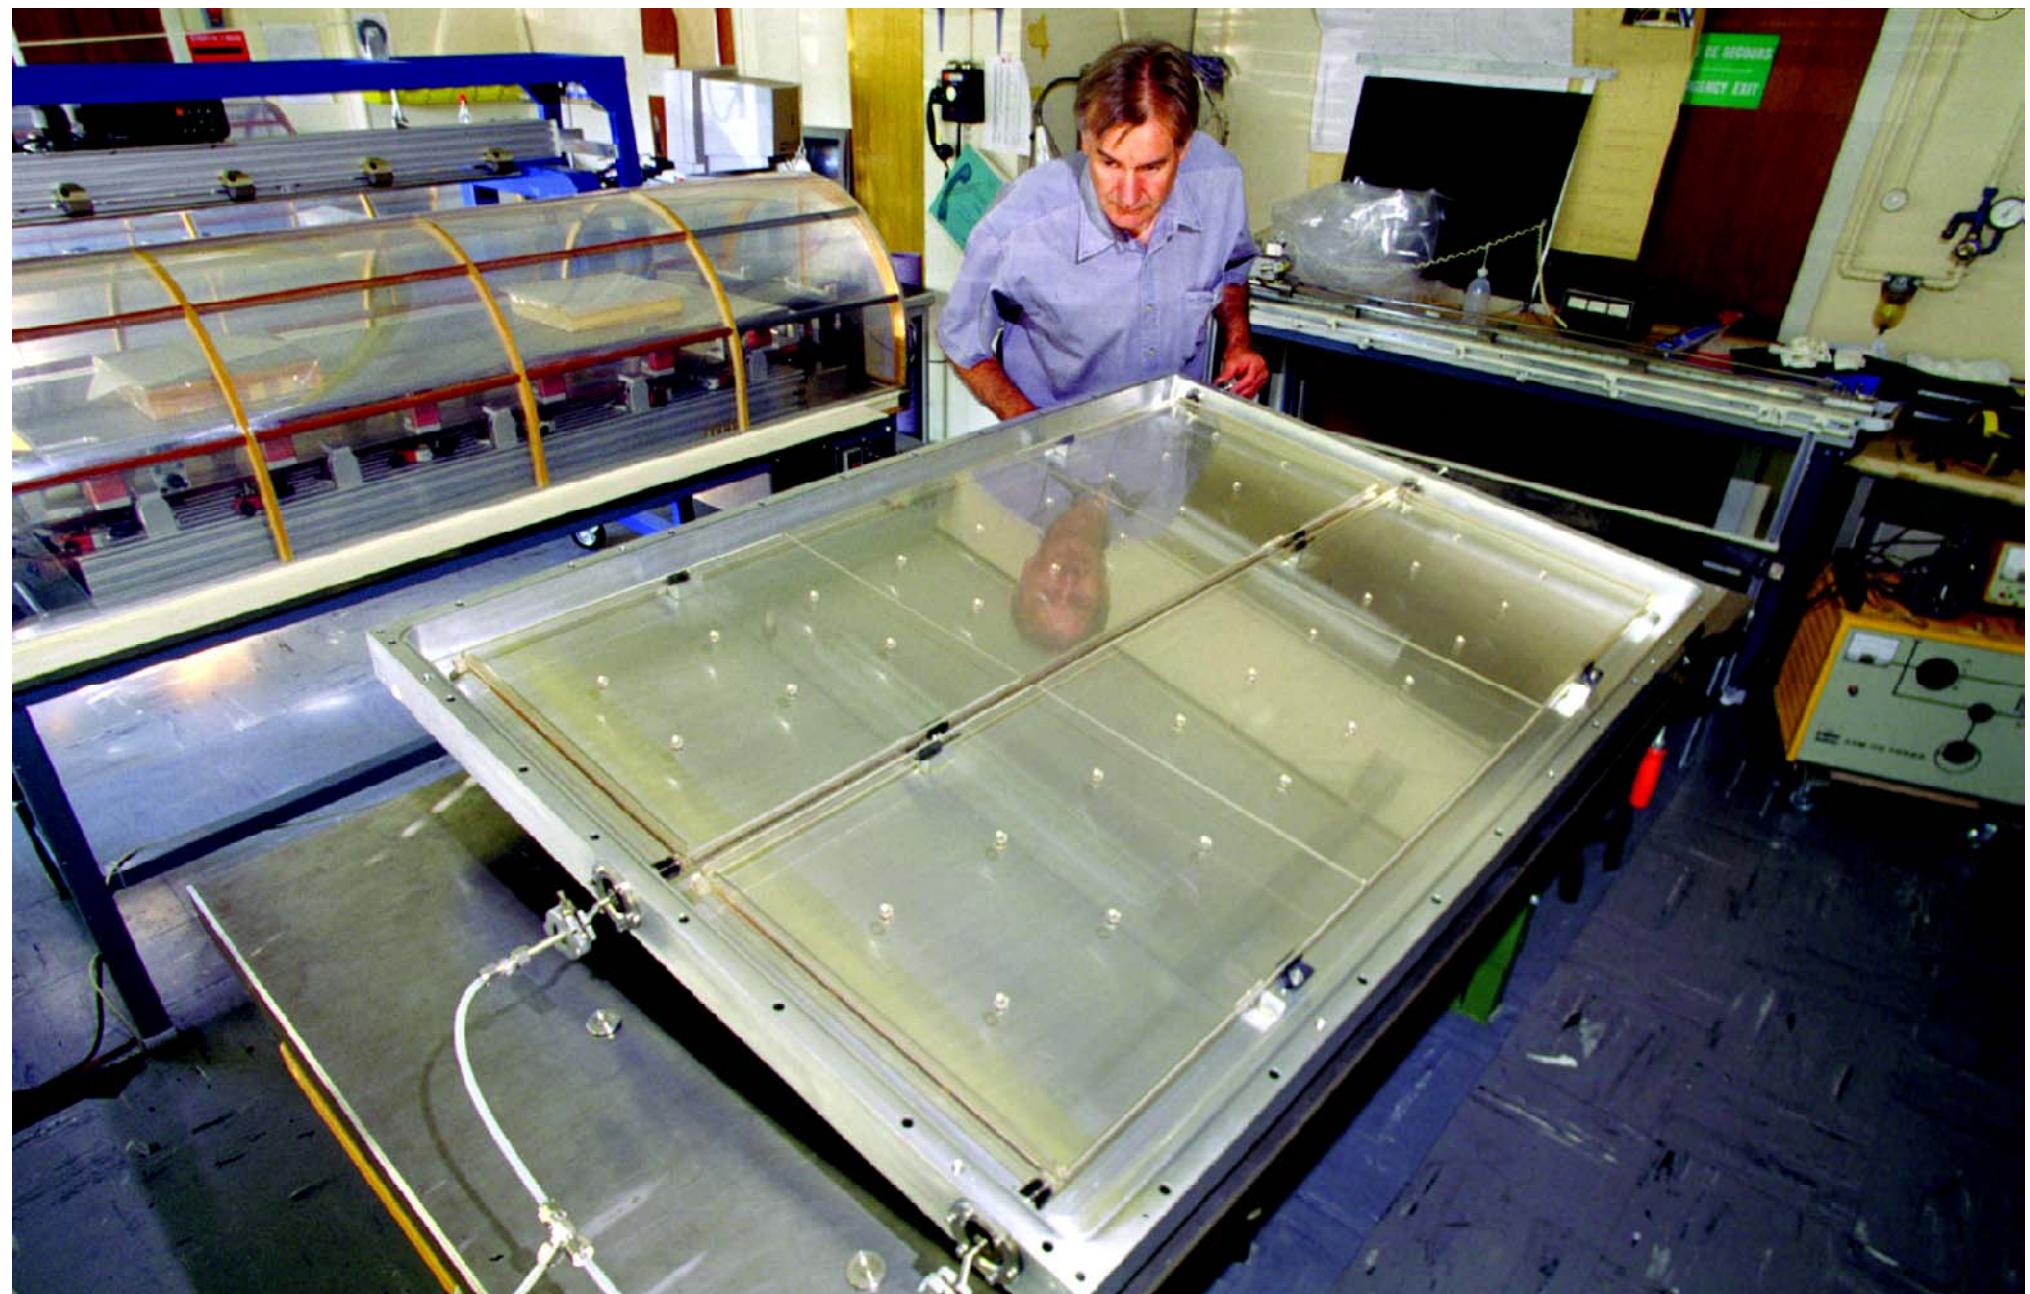

From Franck Wilczek's
Nobel lecture

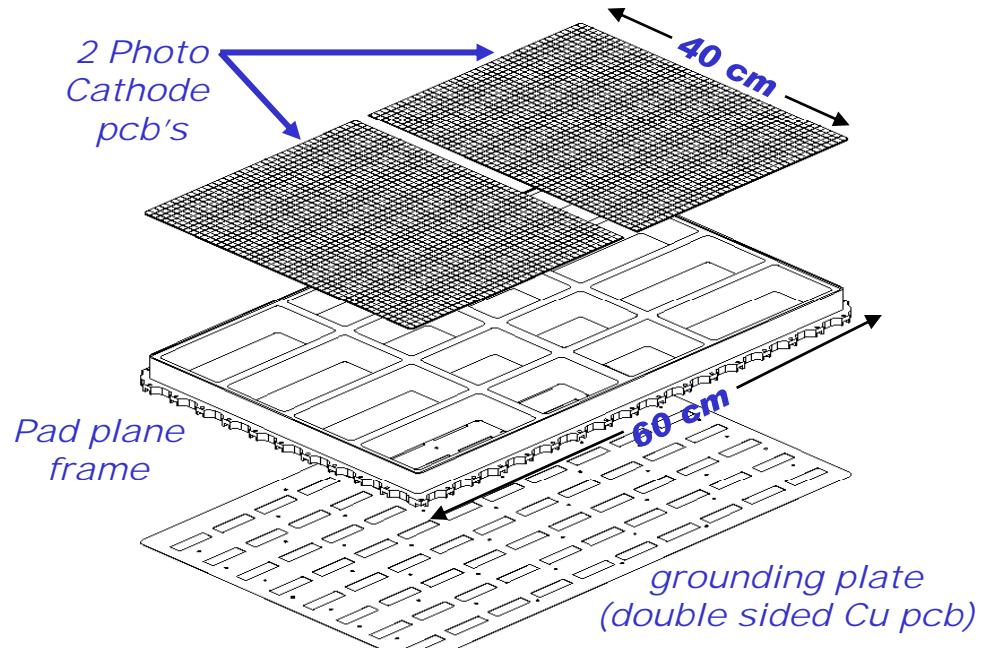

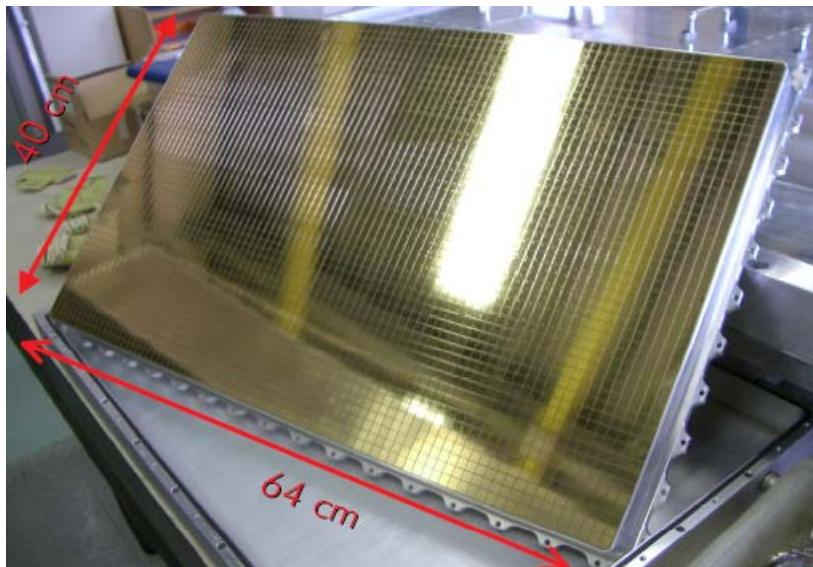

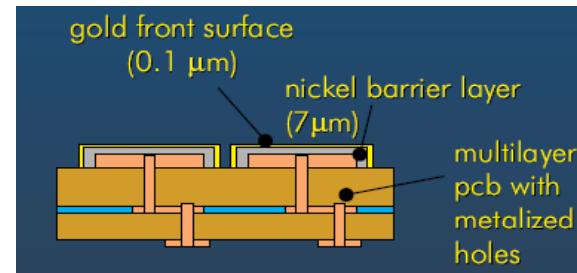

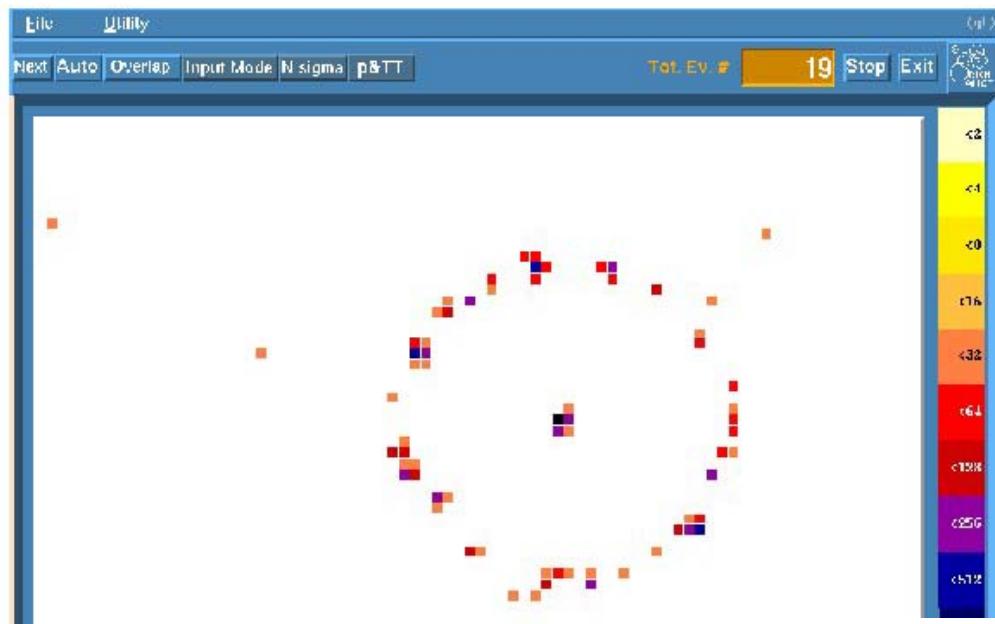

Substrate for the CsI photocathode (PC)

double layer
Cu clad PCB
coated with
Ni, Au

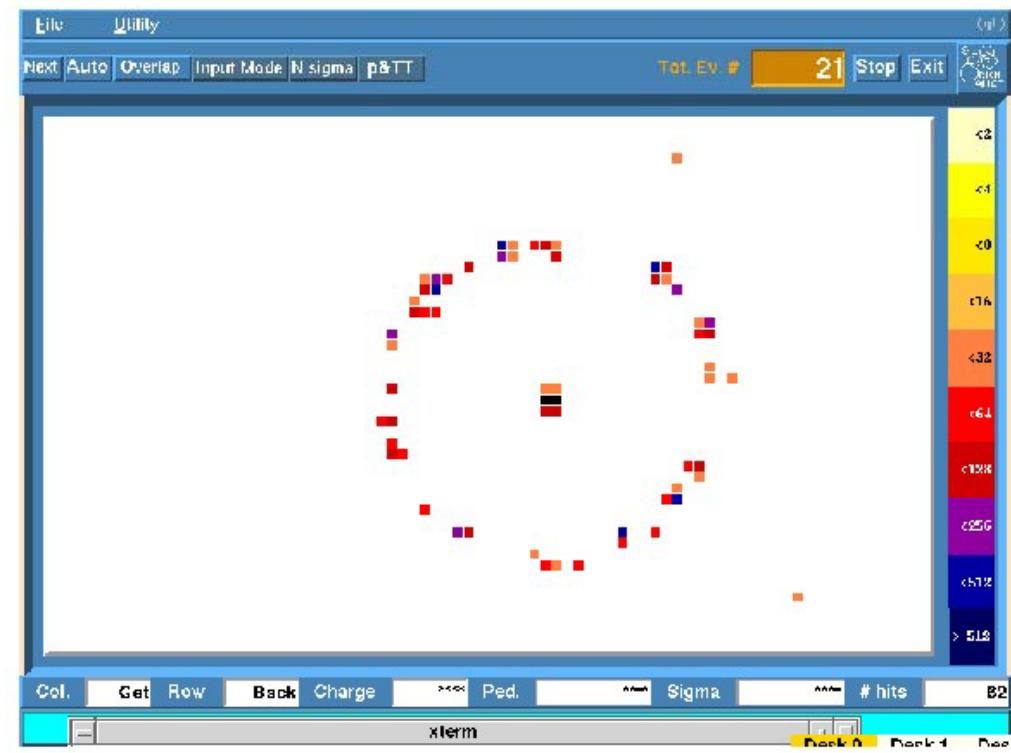

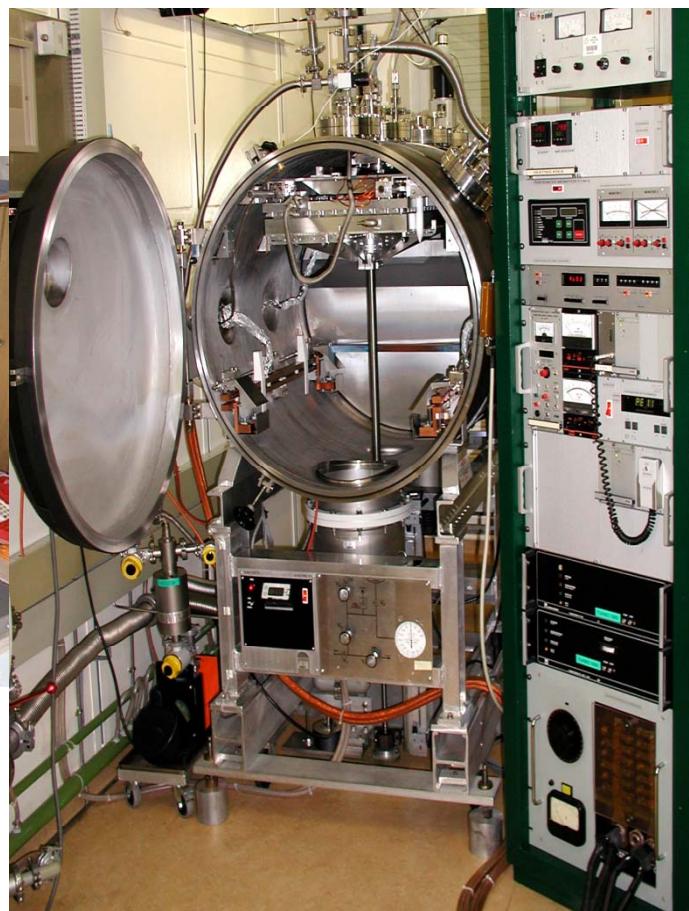

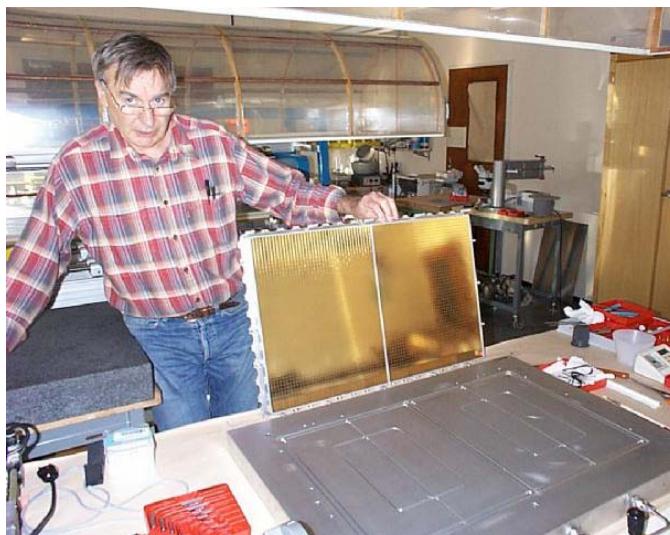

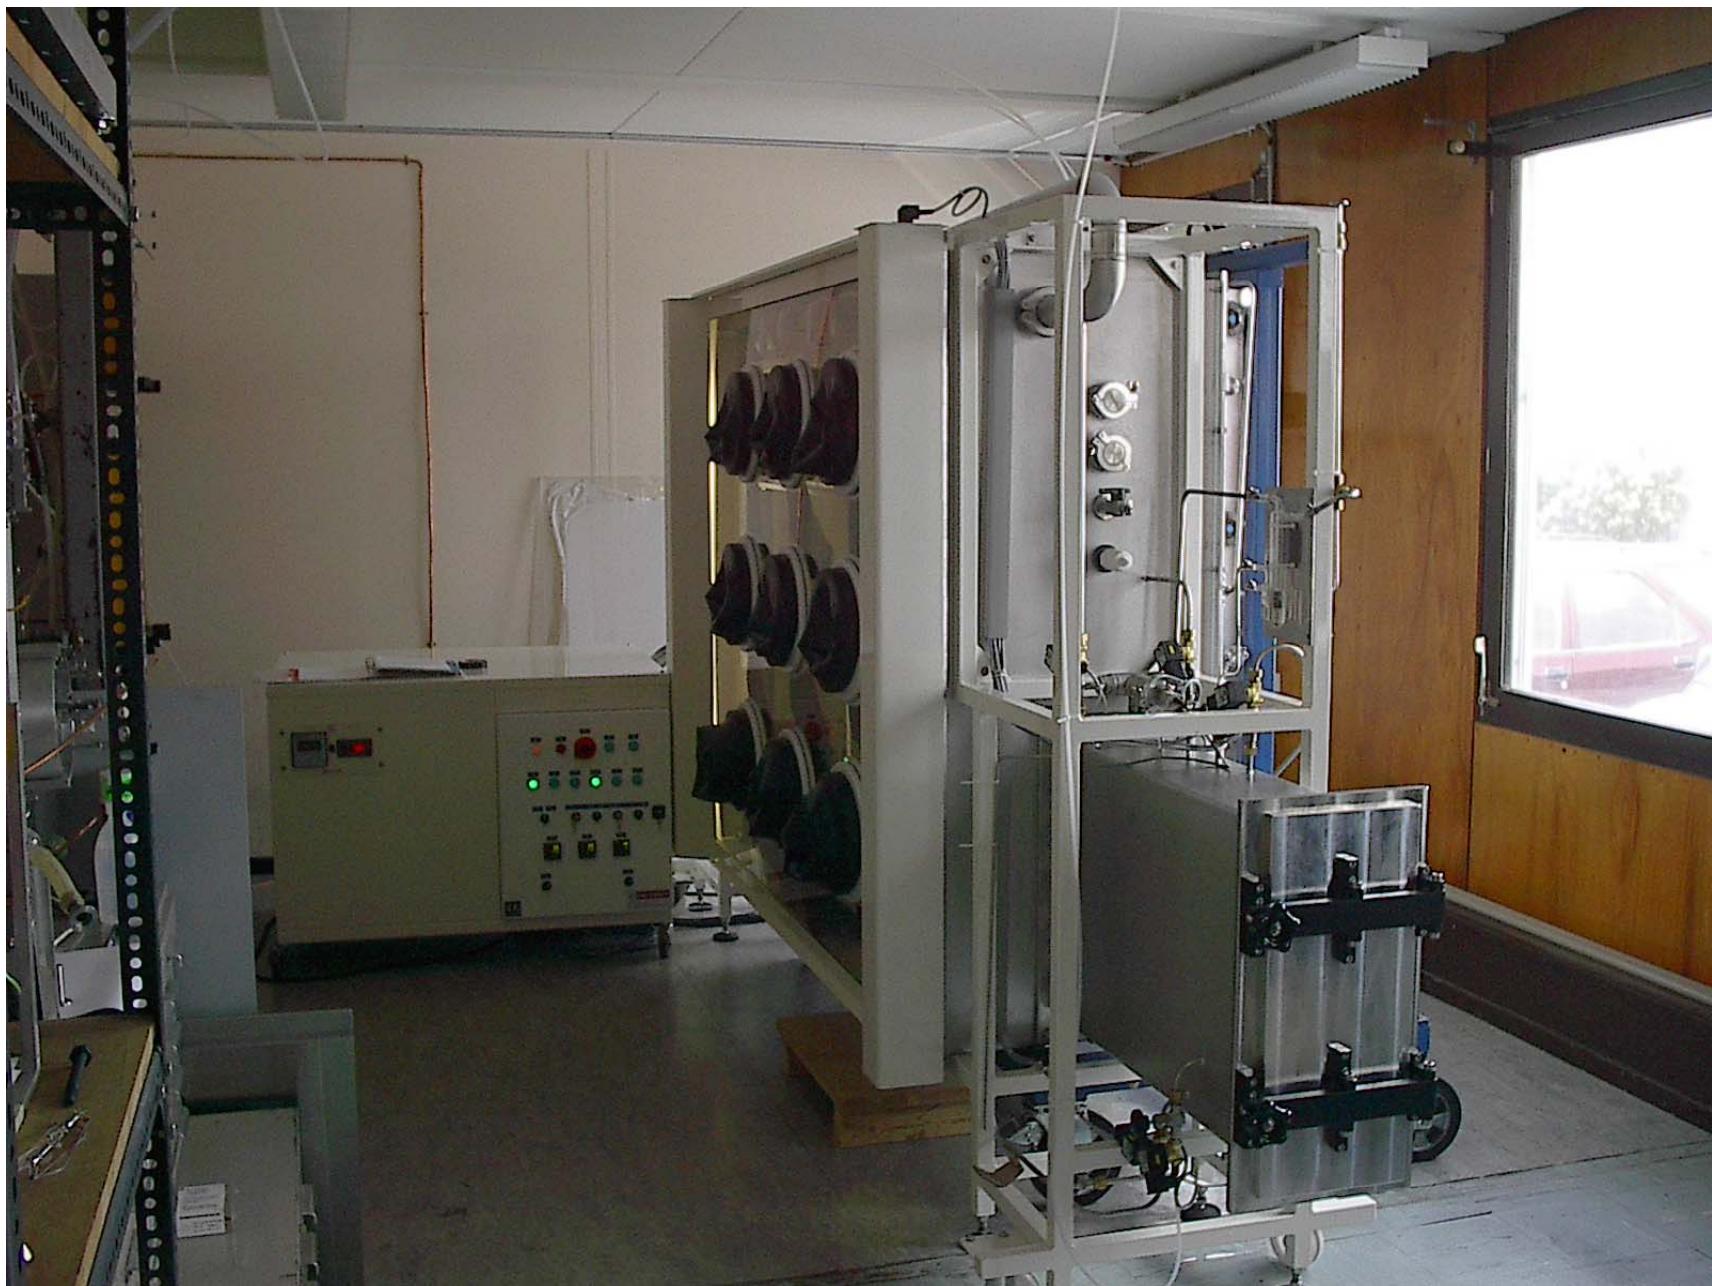

Col. Get Row Back Charge Ped. Sigma # hit

xterm

Desk 0

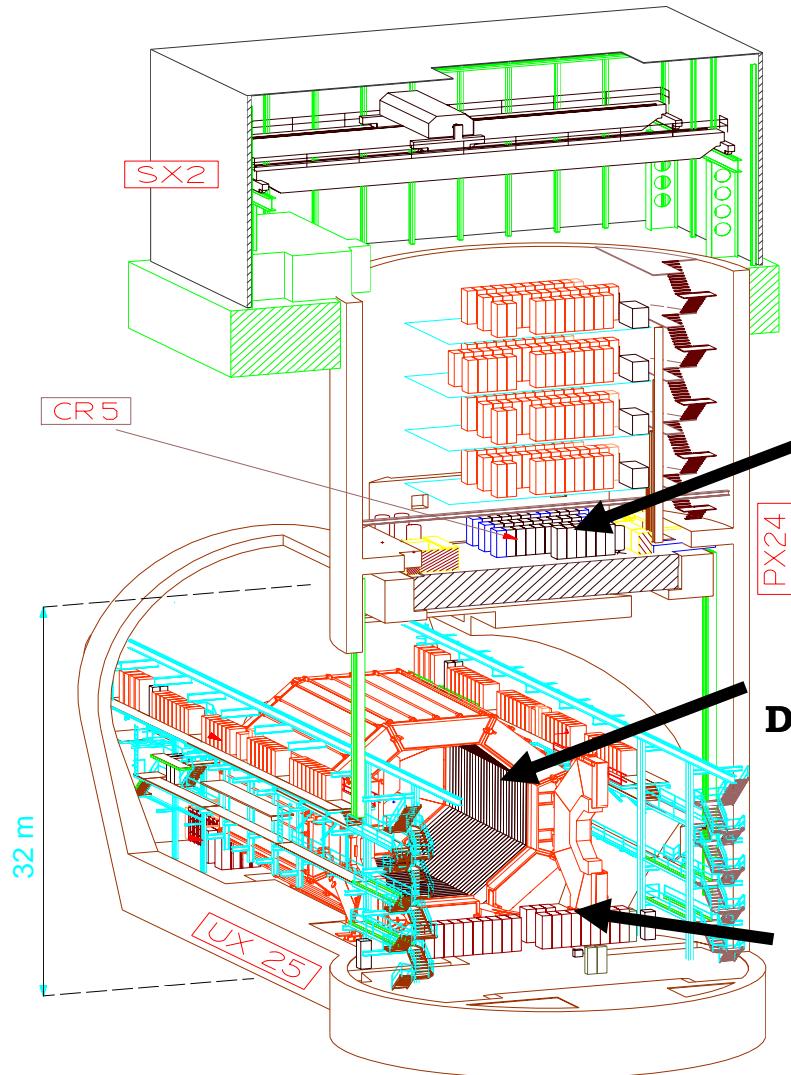

The C_6F_{14} circulation system

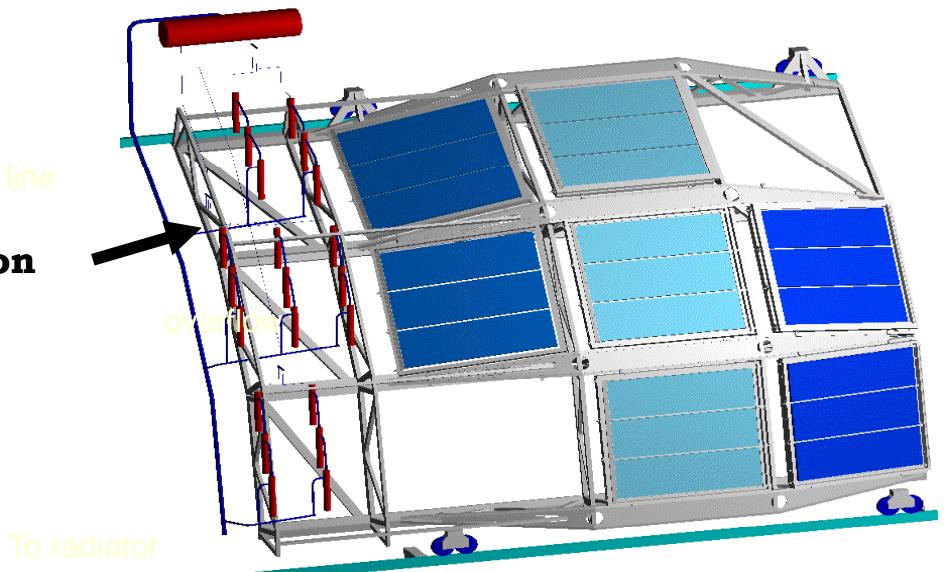

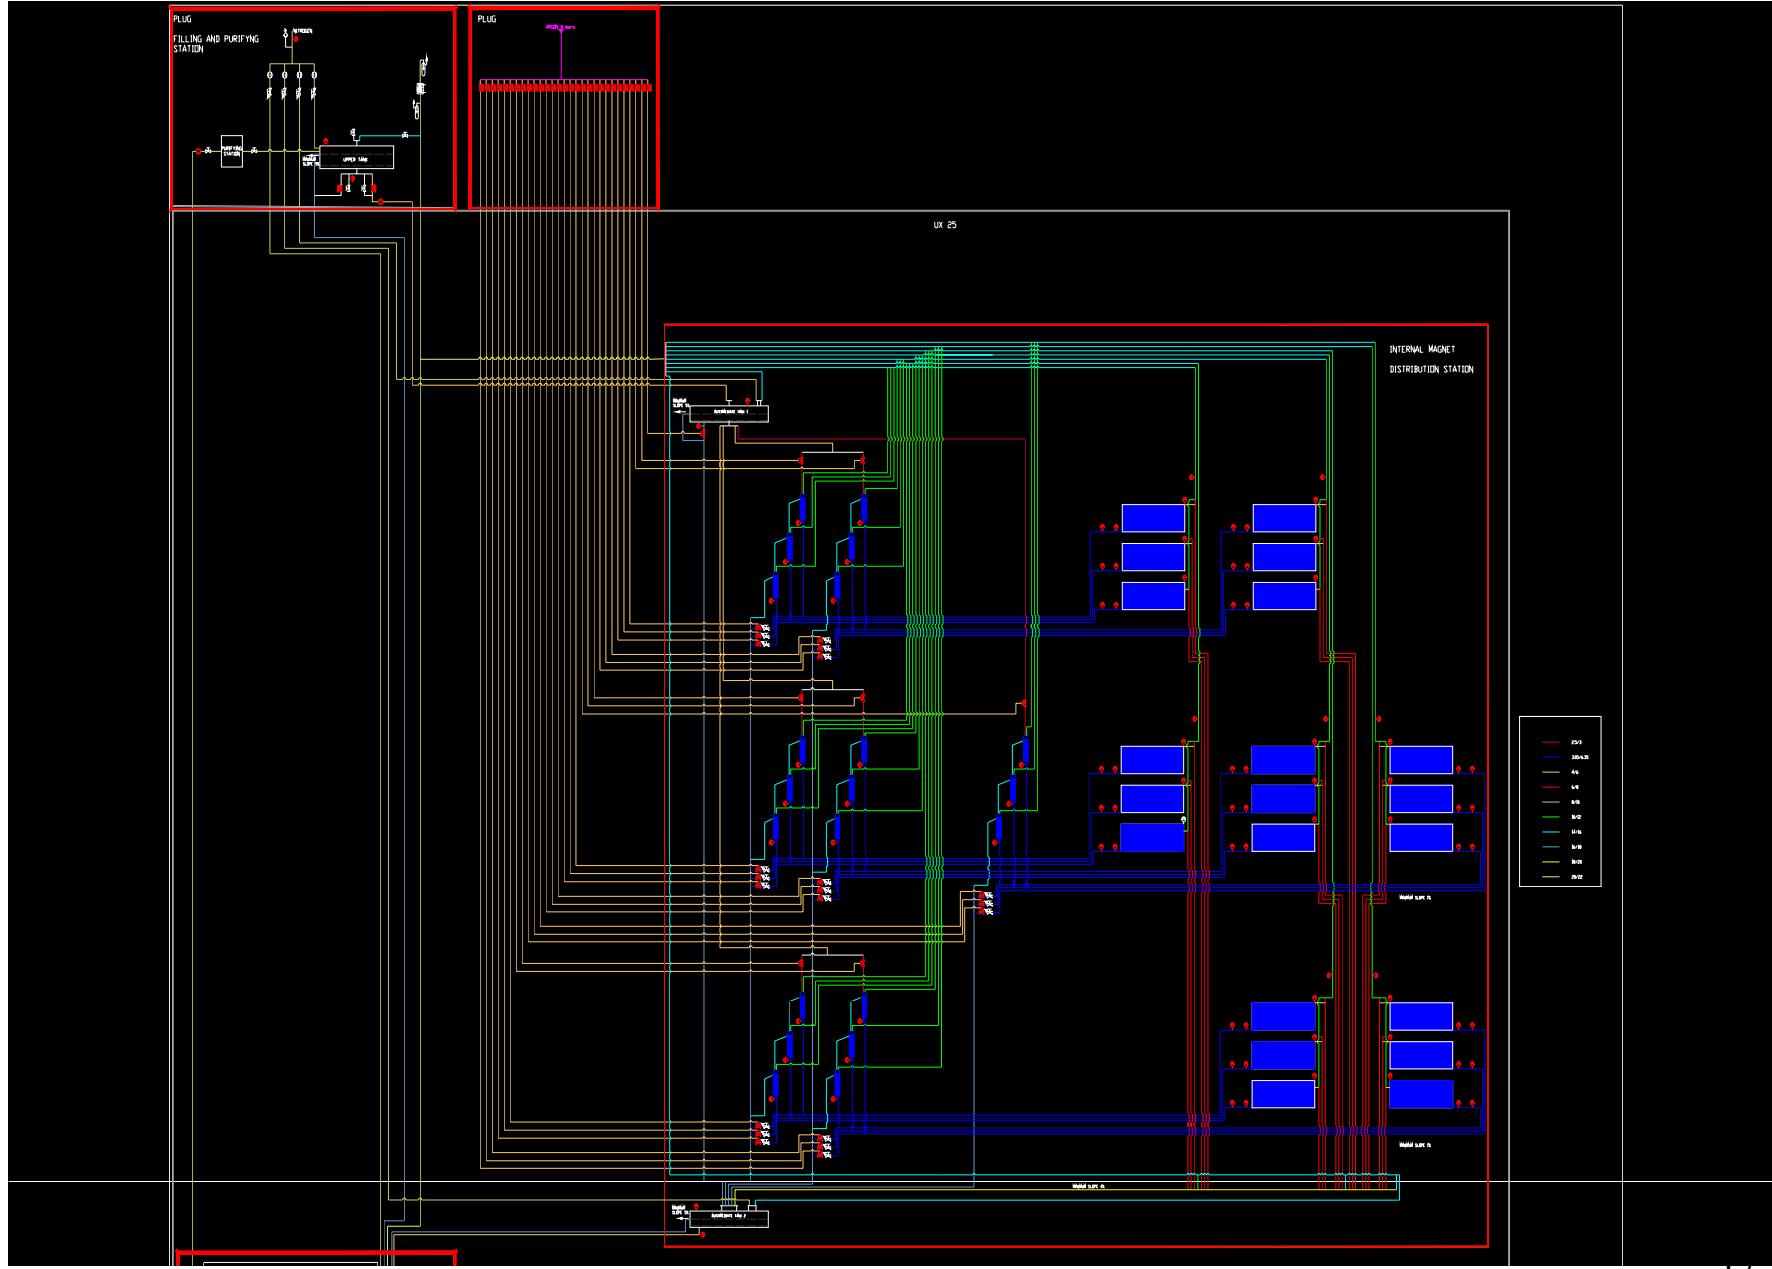

- purify (water, oxygen), fill and empty at a constant flow (4l/h)
- independently, remotely and safely on the 21 radiator planes
- gravity flow
