

# Introduction: outcomes from the 1st workshop in Seattle

*A.A. Sonzogni, E.A. McCutchan,  
National Nuclear Data Center  
Brookhaven National Laboratory  
Building 817  
Upton, NY 11973-5000  
[www.nndc.bnl.gov](http://www.nndc.bnl.gov)*

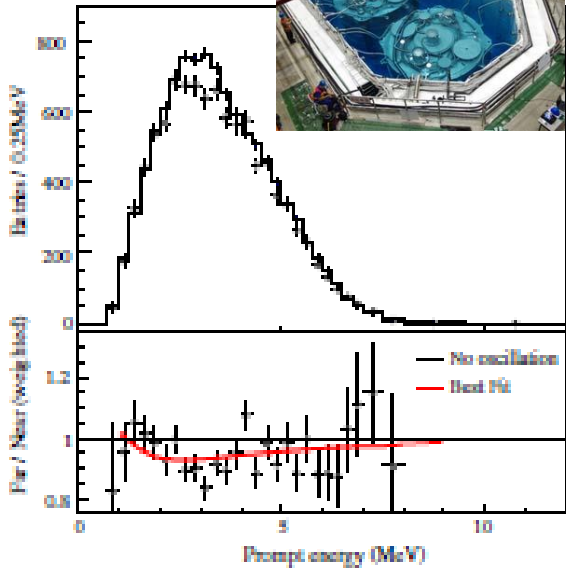

**Thanks to the people in  
Subatech for organizing and  
hosting this workshop!**

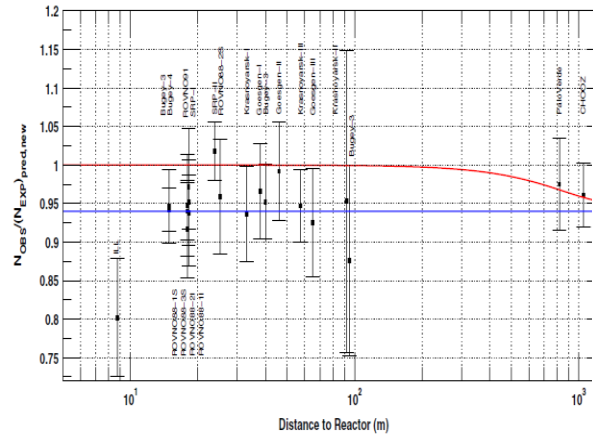

# Antineutrinos from reactors

A “hot” topic ...

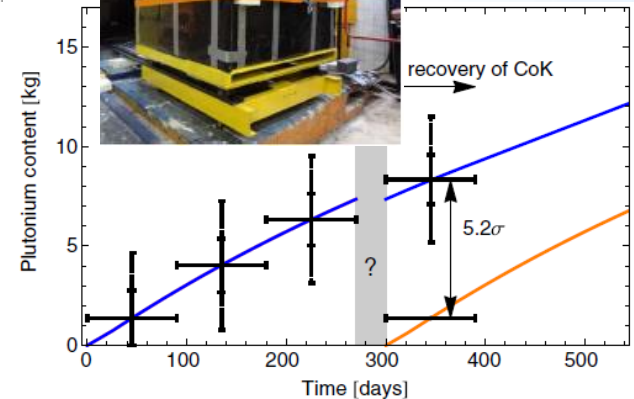

Daya Bay  
RENO / DC

Reactor  
Anomaly

Applications

New results for  $\theta_{13}$

F.P. An *et al.*, PRL **108**, 171803 (2012)

Brookhaven Science Associates

- Physics beyond the standard model
- 4<sup>th</sup> sterile neutrino

G. Mention *et al.*, PRD **83**, 073006 (2011).

Non-proliferation

E. Christensen *et al.*,  
PRL **113**, 042503 (2014)

# Connection to basic nuclear physics

## Summation method (or ab-initio method)

## Benefits

- Connects low-energy nuclear physics research to another basic science community
- Provides links between microscopic and integral measurements
- Spurs new measurements
- Improved databases

Single nucleus – sum  $\beta$  branches\*intensity

$$S_i(E_e) = \sum b_{ilk} S_{ik}(E_e)$$

Total – sum  $\beta$  spectrum\*fission yield

$$S(E_e) = \sum_i FY_i S_i(E_i)$$

# Efforts by the Neutrino Community

Numerous Very Short Baseline Experiments  
ranging from operating to planning stages

**Nucifer, France**  
Operational, D=7m

**Neutrino-4, Russia**  
Nearly Operational, D=6-13m

**PROSPECT, USA**  
Conceptual

CORMORAD – Italy, PANDA – Japan, SOLiD - France

# New measurements on the horizon

TAGS:

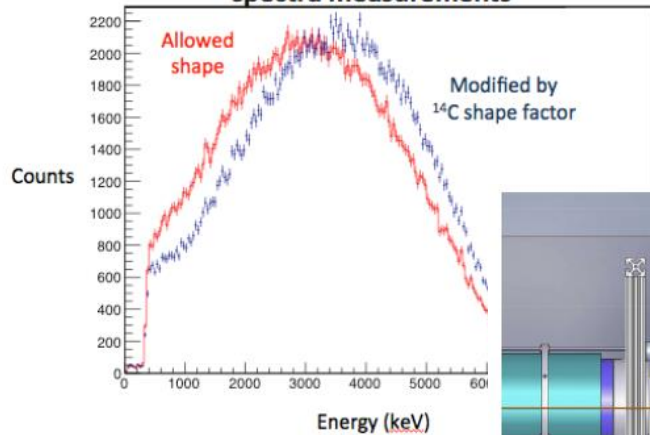

- ORNL and Valencia/Jyvaskyla

Beta-Spectrum + discrete  $\gamma$ 's

- LLNL – BNL led collaboration
- Proposal on  $^{92}\text{Rb}$  and  $^{96}\text{Y}$  accepted at last ANL PAC

Simulated  $^{96}\text{Y}$  beta spectra measurements

# INT Workshop, Nov. 2013

---

- The topic of the workshop was the calculation of antineutrino spectra from nuclear reactors. Accurate spectra and fluxes are crucial for the interpretation of experiments measuring neutrino conversion rates such as Double Chooz, RENO, and Daya Bay.
- If possible, the workshop should result in a documented consensus theory of the antineutrino spectrum, including open source codes to calculate the spectrum.
- Additional goals are to identify experiments that need to be done and calculations that need to be carried out to resolve current disagreements.
- Succeeded to create a forum for scientists working on nuclear physics, nuclear data and antineutrinos to present their latest results and interact. Nantes offered to organize the next workshop.

# Some exciting developments

---

- Preliminary Daya Bay, Reno and Double Chooz results on the shape of the antineutrino spectra are in disagreement with the expected values using conversion method.
- Are there problems with the conversion method, or we need better measurements of the (n,fission) beta spectra?
- New TAGS measurements and future measurements of individual beta spectra.
- Refinements in the summation methods.
