

# MW Package Reporter Development, Status and Plans

Lionel Cons  
IT/SDC

21 January 2015

# Pakiti Interoperability

- share code as much as possible
- do not share collected data at all
- single reporter to come from EPEL
- different reporter configurations:
  - to report to EGI security
  - to report to MW readiness
- sites control where they report to

# Progress (1/2)

- reporter has been extended
  - both use cases now covered
- reporter has become Pakiti v3's client
  - 100% of the client code now shared!
- Pakiti has been submitted to EPEL
  - it has been accepted!
  - only the client rpm so far: **pakiti-client**

## Progress (2/2)

The [installation instructions](#) have been updated:

```
# yum install pakiti-client
# wget https://.../wlcg-package-reporter.conf
$ pakiti-client --conf wlcg-package-reporter.conf
```

Hard to be simpler...

# Plans

- get the Pakiti client (with the MW readiness configuration) installed on more machines => we need your help!
- finish the package database API
- work on MW readiness reporting
  - the more machines report, the better
  - requires Andrea's MW readiness API
