

# The new ROOT browser

*Monday, March 23, 2009 8:00 AM (20 minutes)*

Description of the new implementation of the ROOT browser

## Presentation type (oral | poster)

poster

## Summary

To improve the flexibility of the ROOT browser, a new version has been developed, offering, among other, the following advantages:

- Provides a fully and dynamically configurable interface.
- Uses a dynamic plug-in mechanism to reduce the code size and to extend its functionality.
- Already available (built-in) plug-ins:
  - File browser
  - Canvas
  - Text editor
  - HTML browser
- ...
- Any kind of user defined plug-in can be added without too much effort from the user side (even simple macros can be used as plug-ins).

The aim of this poster is to show a global view of this new version.
