## Study of three-body charmonium decays in BABAR.

We study the reaction e+ e- -> gamma\_ISR J/psi, where J/psi -> pi+ pi- pi0, and J/psi -> K+ K- pi0, using events obtained from the Initial State Radiation process. We measure the relative J/psi branching fraction and perform a Dalitz plot analysis of both J/psi decay modes using an isobar and a Veneziano model. We present also an analysis of the process gamma gamma -> K anti-K pi. We observe the decays eta\_c -> K\_S K+- pi-+ and eta\_c -> K+ K- pi0 and perform a Dalitz analysis of both eta\_c decay modes. We also extract the mass dependent K\_pi S-wave amplitude and phase using a model-independent partial wave analysis approach. These studies have been performed using the entire BABAR dataset collected at the PEP-II e+e- collider.
