Combined Belle and BABAR Analysis of $B^0 \rightarrow D_{CP}^{(*)}h^0$

- $B^0 \rightarrow D_{CP}^{(*)}h^0$ decays with $h^0 \in {\pi^0, \eta, \omega}$ mediated only by tree-level amplitudes
- Theoretically clean [NPB 659, 321 (2003)]:
 - \rightarrow Enables to test the precision measurements of $\mathrm{b}\rightarrow\mathrm{c\bar{c}s}$
 - \rightarrow Can provide a SM reference of $\sin(2\beta)$, e.g. for BSM searches in $b \rightarrow s$ penguins
- Experimental difficulties: Low B and D_{CP} branching fractions [$O(10^{-4})$ and $O(\le 10^{-2})$]
 - Low reconstruction efficiencies
 - Significant background
- Previous measurements by Belle and <code>BABAR</code> could not establish CPV in ${\rm B}^0

Threshold $B\bar{B}$ production on the $\Upsilon(4S)$:

Proper time interval distribution follows:

$$\mathcal{P}(\Delta t, q) = \frac{1}{4\tau_{B^0}} e^{-\frac{|\Delta t|}{\tau_{B^0}}} \left[1 + q\left(\boldsymbol{\mathcal{S}}\sin(\Delta m \Delta t) - \boldsymbol{\mathcal{C}}\cos(\Delta m \Delta t)\right)\right]$$

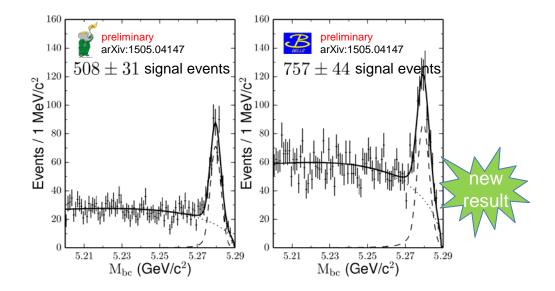

Experimental effects due to finite vertex resolution and imperfect tagging are important

- In total 12 final states are reconstructed (7 CP-even and 5 CP-odd states)
- Suppression of $e^+e^- \rightarrow q\bar{q} \ (q \in \{u, d, s, c\})$ continuum background by neural networks
- Coherent analysis strategy, apply almost same selection on Belle and BABAR data

Perform measurement by maximizing the combined log-likelihood function:

$$\ln \mathcal{L} = \sum_{i} \ln \mathcal{P}_{i}^{BABAR} + \sum_{j} \ln \mathcal{P}_{j}^{Belle}$$

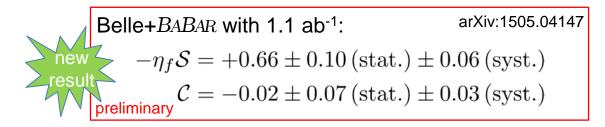

• Physics PDFs are convoluted with specific resolution functions

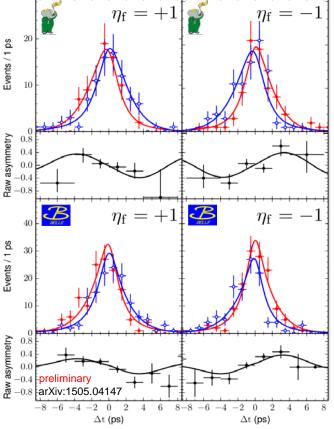

$$\mathcal{P}^{\mathrm{Exp.}} = \sum_{k} f_{k} \int \left[P_{k} \left(\Delta t' \right) R_{k} \left(\Delta t - \Delta t' \right) \right] d \left(\Delta t' \right)$$

- Apply Belle and *BABAR* specific resolution models, and flavor tagging algorithms
- Apply common signal model:

$$P_{sig}(\Delta t, q) = \frac{1}{4\tau_{B^0}} e^{-\frac{|\Delta t|}{\tau_{B^0}}} \left[1 + q \left(\mathcal{S}\sin(\Delta m \Delta t) - \mathcal{C}\cos(\Delta m \Delta t)\right)\right]$$

Summary

Performed CP violation analysis of $B^0 \rightarrow D_{CP}^{(*)}h^0$ combining final *BABAR* and Belle data sets:

- First analysis using more than 1 ab^{-1} collected on the $\Upsilon(4S)$
- No sign of direct CP violation
- Exclude the no-mixing induced CP violation hypothesis at 5.4σ

 \rightarrow First observation of CP violation in $B^0 \rightarrow D_{CP}^{(*)}h^0$ decays

- Very good agreement with $\sin(2\beta)$ from $b \to c\bar{c}s$
- Paper has been submitted to Physical Review Letters (arXiv:1505.04147)
