UTfit Collaboration Average of D meson mixing data.

Friday 24 July 2015 15:15 (15 minutes)

We update the analysis of D meson mixing including the latest
experimental results as of May 2015. We derive constraints on the parameters M12, Gamma12 and Phi12 that describe D meson mixing
using all available data, allowing for CP violation. We also provide posterior distributions for observable parameters appearing in D physics.
