## The low-lying spectrum of $N=1$ supersymmetric Yang-Mills theory

*Saturday, July 25, 2015 12:30 PM (15 minutes)*

The spectrum of the lightest bound states in  $N=1$  supersymmetric Yang-Mills theory, calculated on the lattice, is presented. The masses have first been extrapolated towards vanishing gluino mass and then to the continuum limit. The final picture is consistent with the formation of degenerate supermultiplets.
