## Muon reconstruction performance in ATLAS at Run-II

The ATLAS muon reconstruction has been improved for the Run-II of the LHC.

In this presentation, we will discuss the new reconstruction algorithm and its performance as measured during the early run of the LHC in 2015 at  $\sqrt{s}=13$  TeV using samples of  $J/\psi \rightarrow \mu\mu$  and  $Z \rightarrow \mu\mu$  decays.

Reconstruction efficiency, transverse momentum resolution and momentum scales are measured in the various regions of the detector and for muon momenta between 5 and hundreds of GeV.

### additional information

Submitted on behalf of the ATLAS Muon Combined Performance Group by the ATLAS Speakers Committee representative Alex Read (a.l.read@fys.uio.no). Alex is not the speaker! A speaker will be selected by the Speakers Committee when the abstract is accepted.
