Semileptonic B and Bs decays at Belle

Friday 24 July 2015 09:45 (15 minutes)

Semileptonic B meson decays, $B \rightarrow X\ell\nu$, are currently the preferred modes for determining the Cabibbo-Kobayashi-Maskawa (CKM) matrix elements $|V_{cb}|$ and $|V_{ub}|$, two fundamental parameters of the Standard Model. At the same time they can also be used to test and refine the theoretical tools used for describing the production of B mesons and their decays. Based on the large data sample accumulated by the Belle experiment at the KEKB asymmetric energy e^+e^- collider at KEK, Japan, we present new results on semileptonic decays of B and Bs mesons.

additional information

Submitted on behalf of the Belle collaboration.

Actual presenter will be selected by the Belle collaboration at a later time.

Authors: GLATTAUER, Robin (Institute of High Energy Physics Vienna); KWON, Youngjoon (Yonsei University)

Presenter: GLATTAUER, Robin (Institute of High Energy Physics Vienna)

Session Classification: Flavour Physics and Fundamental Symmetries

Track Classification: Flavour Physics and Fundamental Symmetries
