

# Thoughts on software development in Japan and KEK

Takashi Sasaki

KEK Computing Research Center

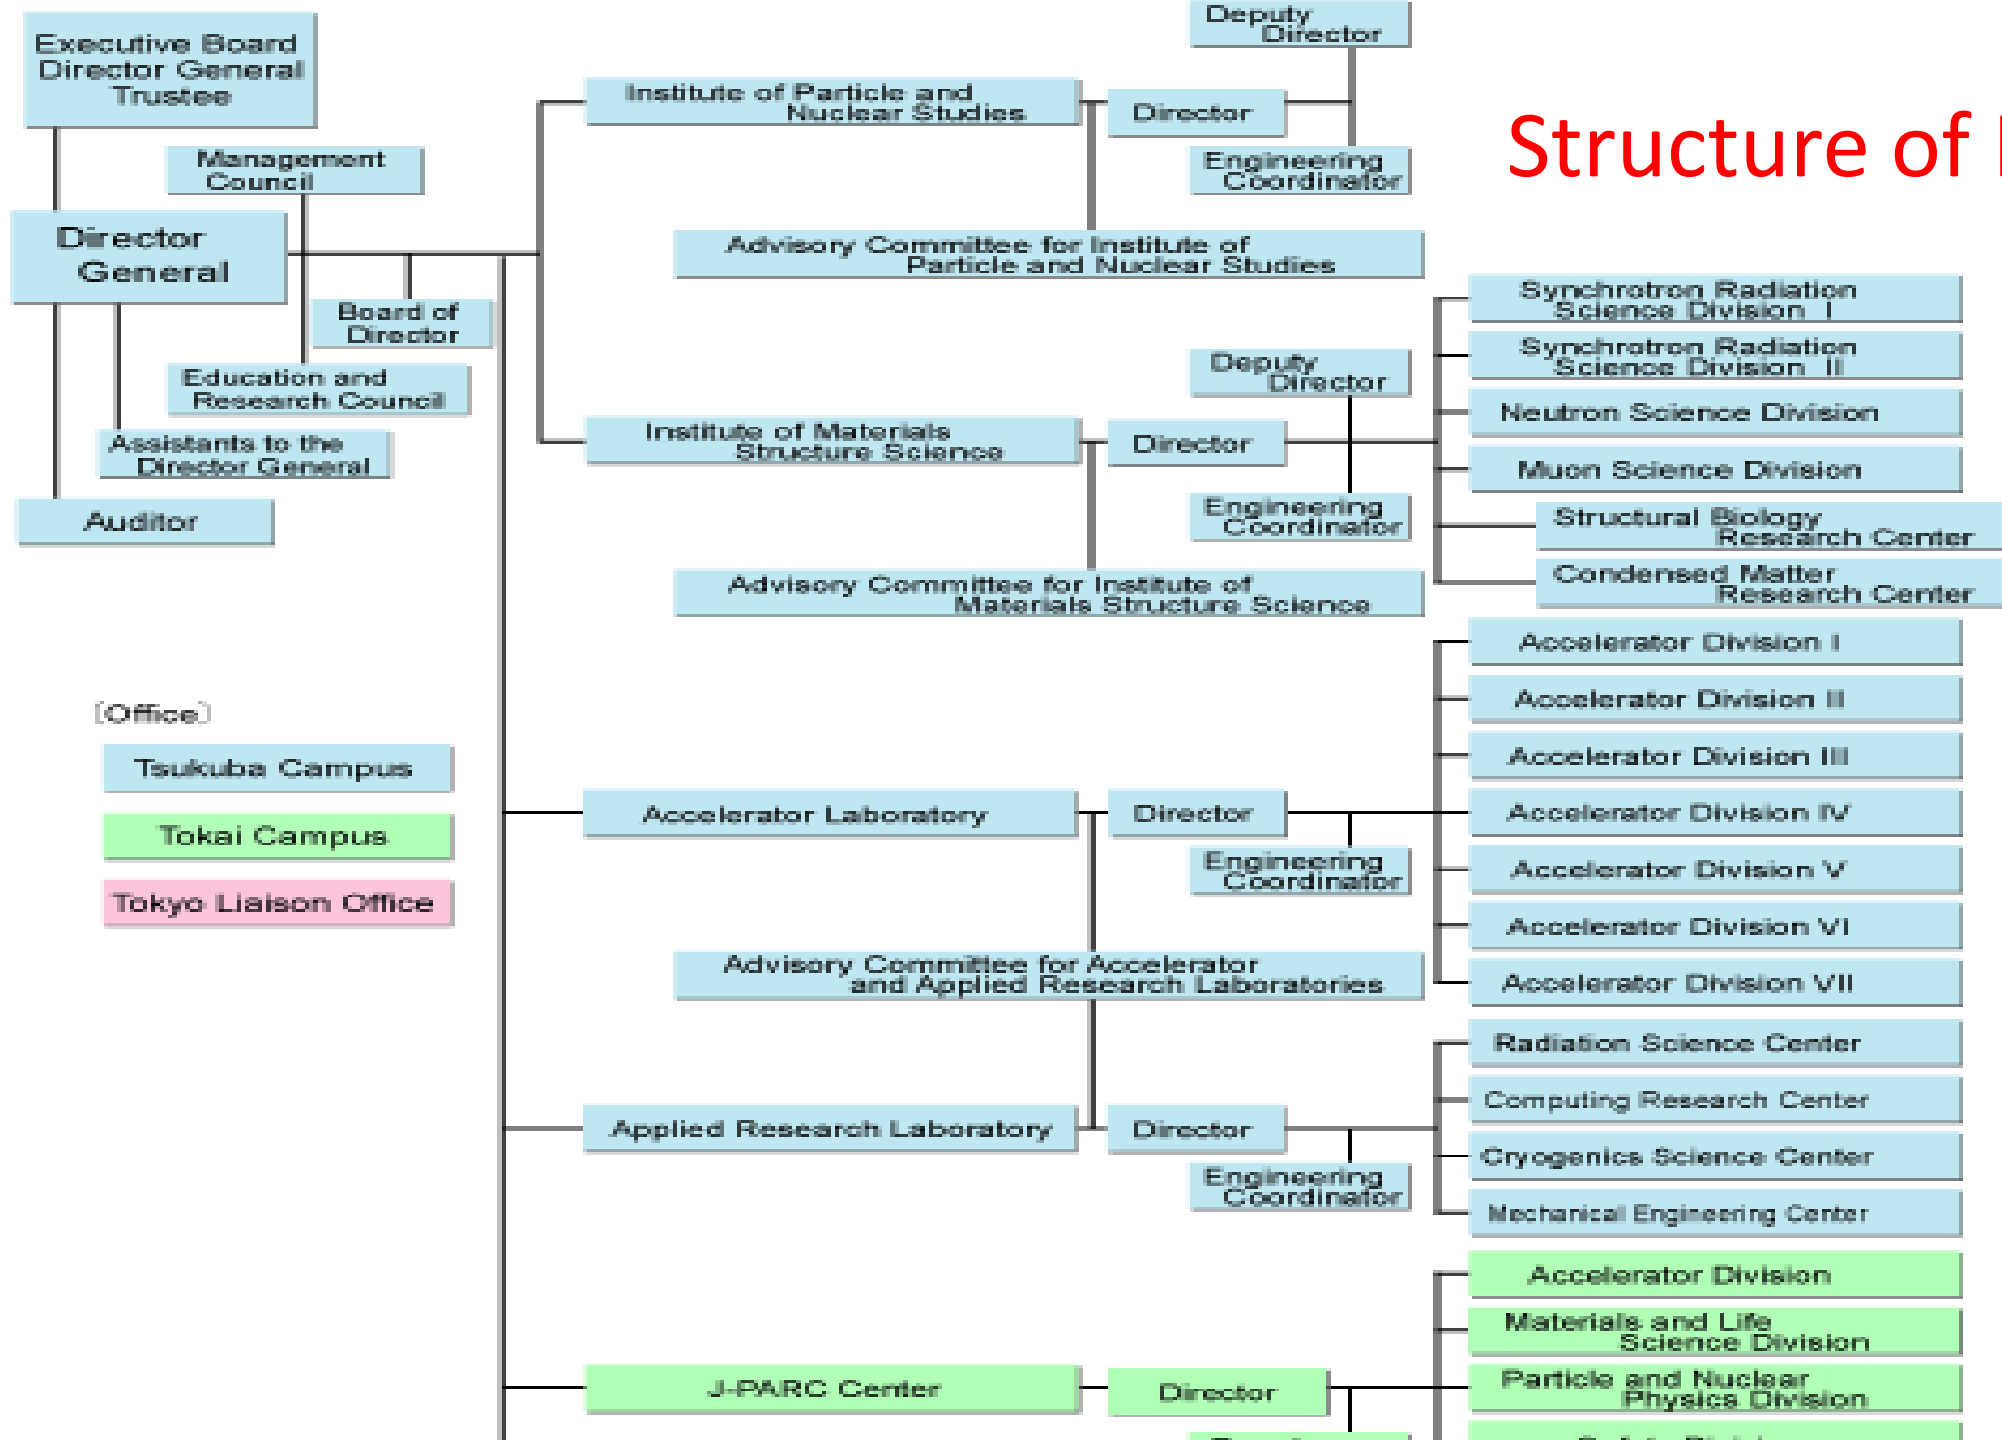

# Disclaimer

- The views and opinions expressed in this presentation are those of mine and do not necessarily reflect those of my employer
- I am affiliated with KEK, but not representing them

# Background

- KEK is an inter-university research institute cooperation
  - As well as other national universities in Japan, KEK is on the way to privatization but not free from the government restrictions
  - Still almost 100% government funded laboratory
- There is no real engineer positions in universities and KEK, but only technicians
  - This is due to the employment system of the government
- Some part of researchers in KEK have duties which usually engineers do at other lab. (similar to teaching duties in universities)
  - Instead freedom of choice of own research topics are given as far as they obtain their research budget externally
  - KEK has an academic ranks system similar to the universities and researchers may become a PI for applying to external research grants
  - We are allowed to maintain copyright for software by ourselves as well as university professors

# Structure of KEK

[Office]

- Tsukuba Campus
- Tokai Campus
- Tokyo Liaison Office

EGS and PHITS  
Geant4

# Current Japanese situation

- No one is working for HEP software development by job orders in Japanese universities nor KEK
  - People in Geant4 team in KEK who belong to Computing Research Center are hired for duties on purchase, deployment, operation of IT systems originally
    - Large part of actual works are outsourced to companies so far
  - They are working for Geant4 using their spare time according to their research interests
- In my opinion, KEK management people had less interests on computing and software than accelerator and detector constructions historically
  - KEK has no section to develop/support software in experiments

**Accelerator**

*Historic view*

**Detector**

**Computing**

**High**

**priority**

**Low**

# Geant4 Japan

- Founded 20 years ago following SDC@SSC activities
  - Rune, Katsuya and myself met at CHEP1994 in San Francisco (April 1994)
  - We agreed to start the new joint efforts between KEK and CERN
- Very loosely coupled collaboration among professors and researchers in universities and KEK (mostly permanent people)
  - People from different fields made Geant4 rich in functionality and area of applications
    - Computer scientists, physicists, medical physicists and so on
- We still work for Geant4 enthusiastically even after 20 years of the history
  - We have lots of users in the different fields depending on Geant4
  - Efforts on a GPU version are made in parallel of Geant4 activities
- Because of research interests driven collaboration, real costs (money) consumed were smaller compared with efforts paid for Geant4 development
  - People used their time unlimitedly because they worked according to their research interests

DAWN

# Thoughts on HSF

- I was embarrassed a lot to hear the discussions more on politics than technical things at the first HSF meetings honestly speaking
  - Japanese people often say “too many captains will steer the ship up a mountain”
- I am still confused and trying to find the answers
  - What kind of outcomes are expected from HSF? Why they didn't start from writing requirements for necessary packages commonly? Why the community doesn't drive the technical specification decisions?
  - Costs including human resource estimations?
  - How to chose the technical leader or the core development team?
    - Having competitions look healthier than bureaucratic decisions
  - For maintenance and support, inter-lab. operations is very helpful
    - Needs more human power than development itself
    - Costs on user training should be considered also

# An urgent issue in development of simulation

- TeV scale phenomena is reproduced to accumulate interactions in lower energy such as keV or below
- The community looks losing the necessary expertise in such energy
  - Experts knowledgeable to such energy range is retiring
    - Need to hire somebody and train urgently may be from nuclear engineering or defense
  - Old measurements are often not reliable
    - Needs to take points by hands from plots often
    - Authors retired and no way to know the exact experimental setup sometime
  - Nobody wants to do necessary new measurements in voluntary
- Nobody wants fast but inaccurate simulator
- Inter-lab. wide systematic efforts are necessary

# Toward ILC

- People in the Japanese HEP community believe that they have a big chance to host ILC
- Toward ILC, importantness of computing and software is being recognized by leaders
  - Some of them knew HSF
  - I believe that Japanese commitments on development of software and new distributed computing infrastructure are also mandates
  - Discussion on HSF in ICFA will help to convince them
  - This will be a chance to have a professional HEP software development team in Japan

# Personal conclusions

- Developers need the appreciation from users and incentives to continue the development and maintenance of the software through their lifetime
  - Checking the increment of the citation count for our paper is my fun: 6104 @SCOPUS today
  - Geant4 that is the first software in HEP became an inter-discipline standard
  - The Geant4-Japan group will continue the efforts as far as we have users depending on us even in the different disciplines than HEP, but funding matters the future activities
  - Users will decide the fate of the software
- KEK and Japanese HEP community have interests on HSF
- ICFA recognition of HSF will help to encourage Japanese commitments

# CHEP 2015@Okinawa, Japan

- Notifications of paper acceptance is being sent out
  - Because of considerable number of submissions, it will take a time until all of the notifications have sent out
- Please register yourself now if you have not done yet!
- Visit <http://chep2015.kek.jp>
- The next HEP Software Foundation meeting will be held on April 17th afternoon as a BoF (Birds-of-a-feather) session during the CHEP2015.
- It will be very nice if we see the beautiful sunrise of HSF at the really beautiful tropic island, won't it?
  - I am sorry to inform you that OIST is in the sun-set side for the island, anyway
