

CCRC - Summary

- The need for a **Common Computing Readiness Challenge** has been clearly stated by ATLAS & CMS
 - Ideally, ALICE & LHCb should also participate at full nominal **pp** rates
 - The goals & requirements – such as production SRM v2.2 – are common
 - Two slots have been proposed: Feb & May '08
 - Given the goals & importance of this challenge, foresee to use **both** slots
1. Feb: pre-challenge; ensure pre-conditions are met; identify potentially problematic areas
 - Can be <100% successful
 2. May: **THE** challenge;
 - Must succeed!
- In addition to the technical requirements, must ensure adequate {carbon, silicon} resources
 - ***Neither*** of these slots are optimal in this respect, but when is?
 - Need to understand how to provide **production coverage** at all times!
