

Database BOF Session

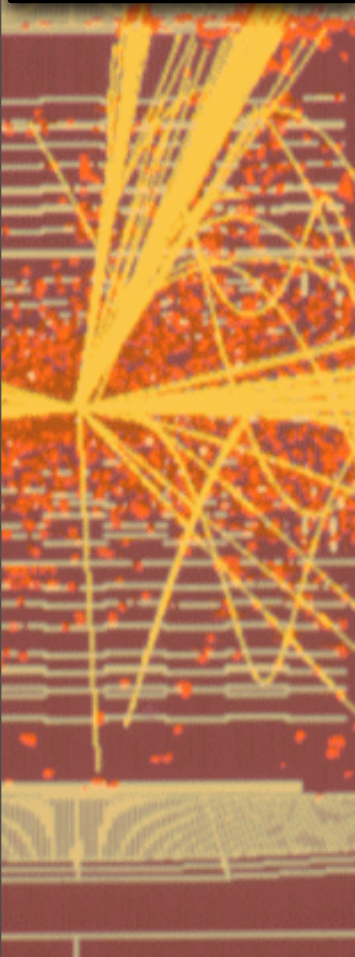

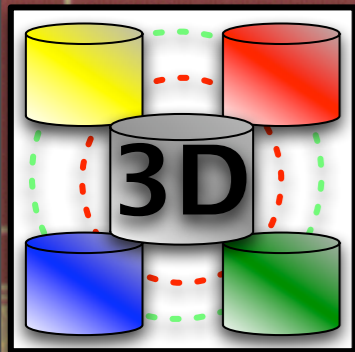

Possible items for discussion

Dirk Duellmann, CERN

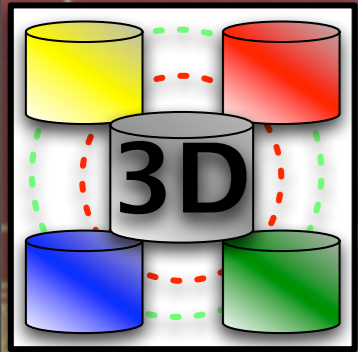

1st September, 2007

WLCG Workshop, Victoria, BC

- To what level of certainty have the scalability tests confirmed the current experiment requests?
- Remaining issues
 - service size or application s/w issues?
 - how can we detect application issues more proactively and preferably at T0
- Any changes to the resource requests for 2008?
 - concrete completion milestones for sites which do not yet completely comply to the request
 - eg IN2P3 (shared server), SARA (shared server), NDGF (final DB set-up not yet delivered)
- Any changes to the resource estimates for 2009?
 - Need to have firm requests for
 - LCG MB presentation, T1 license review, T1 hardware planning

- Apart from experiment resource requests, which other information or tools could help to improve the site service or service planning?
- Status of FTS/LFC back-end DB deployment and consolidation plans. Commonalities? Open questions?
- Which technical information would be good to share at the next 3D workshop?
 - most likely end-October @ CERN
- How do sites (experiments) feel about
 - 3D monitoring ?
 - 3D database alerts ?
 - Monthly reports ?
 - 3D phone meetings ?
