Survey of the main HEP software components (1970 -> 2010)

Monday, September 3, 2007 8:00 AM (20 minutes)

A poster (two A0 pages) shows the main software systems used in HEP in the period 1970 -> 2010 from their conception to their death. Graphics bands are used to indicate the relative importance of each system or tool in the following categories:

- Machines and Operating systems
- Storage systems and access libraries
- Networking and communication software
- Compiled languages
- Code management systems
- Data structures management and I/O systems. Data bases
- Graphical User Interface and Graphics
- Histograms, Math and Statistics
- Scripting systems and Interpreters
- Interactive Analysis systems
- Detector Geometry and Simulation
