

Enabling Grids for E-science

User, Operations and VO Support in EGEE

Torsten Antoni

torsten.antoni@kit.edu

www.eu-egee.org

- **User education**
- **Simple access to a broad range of information**
- **Application integration and support**
- **Day-to-day support for the users of grid data, compute, networking and VO specific services**

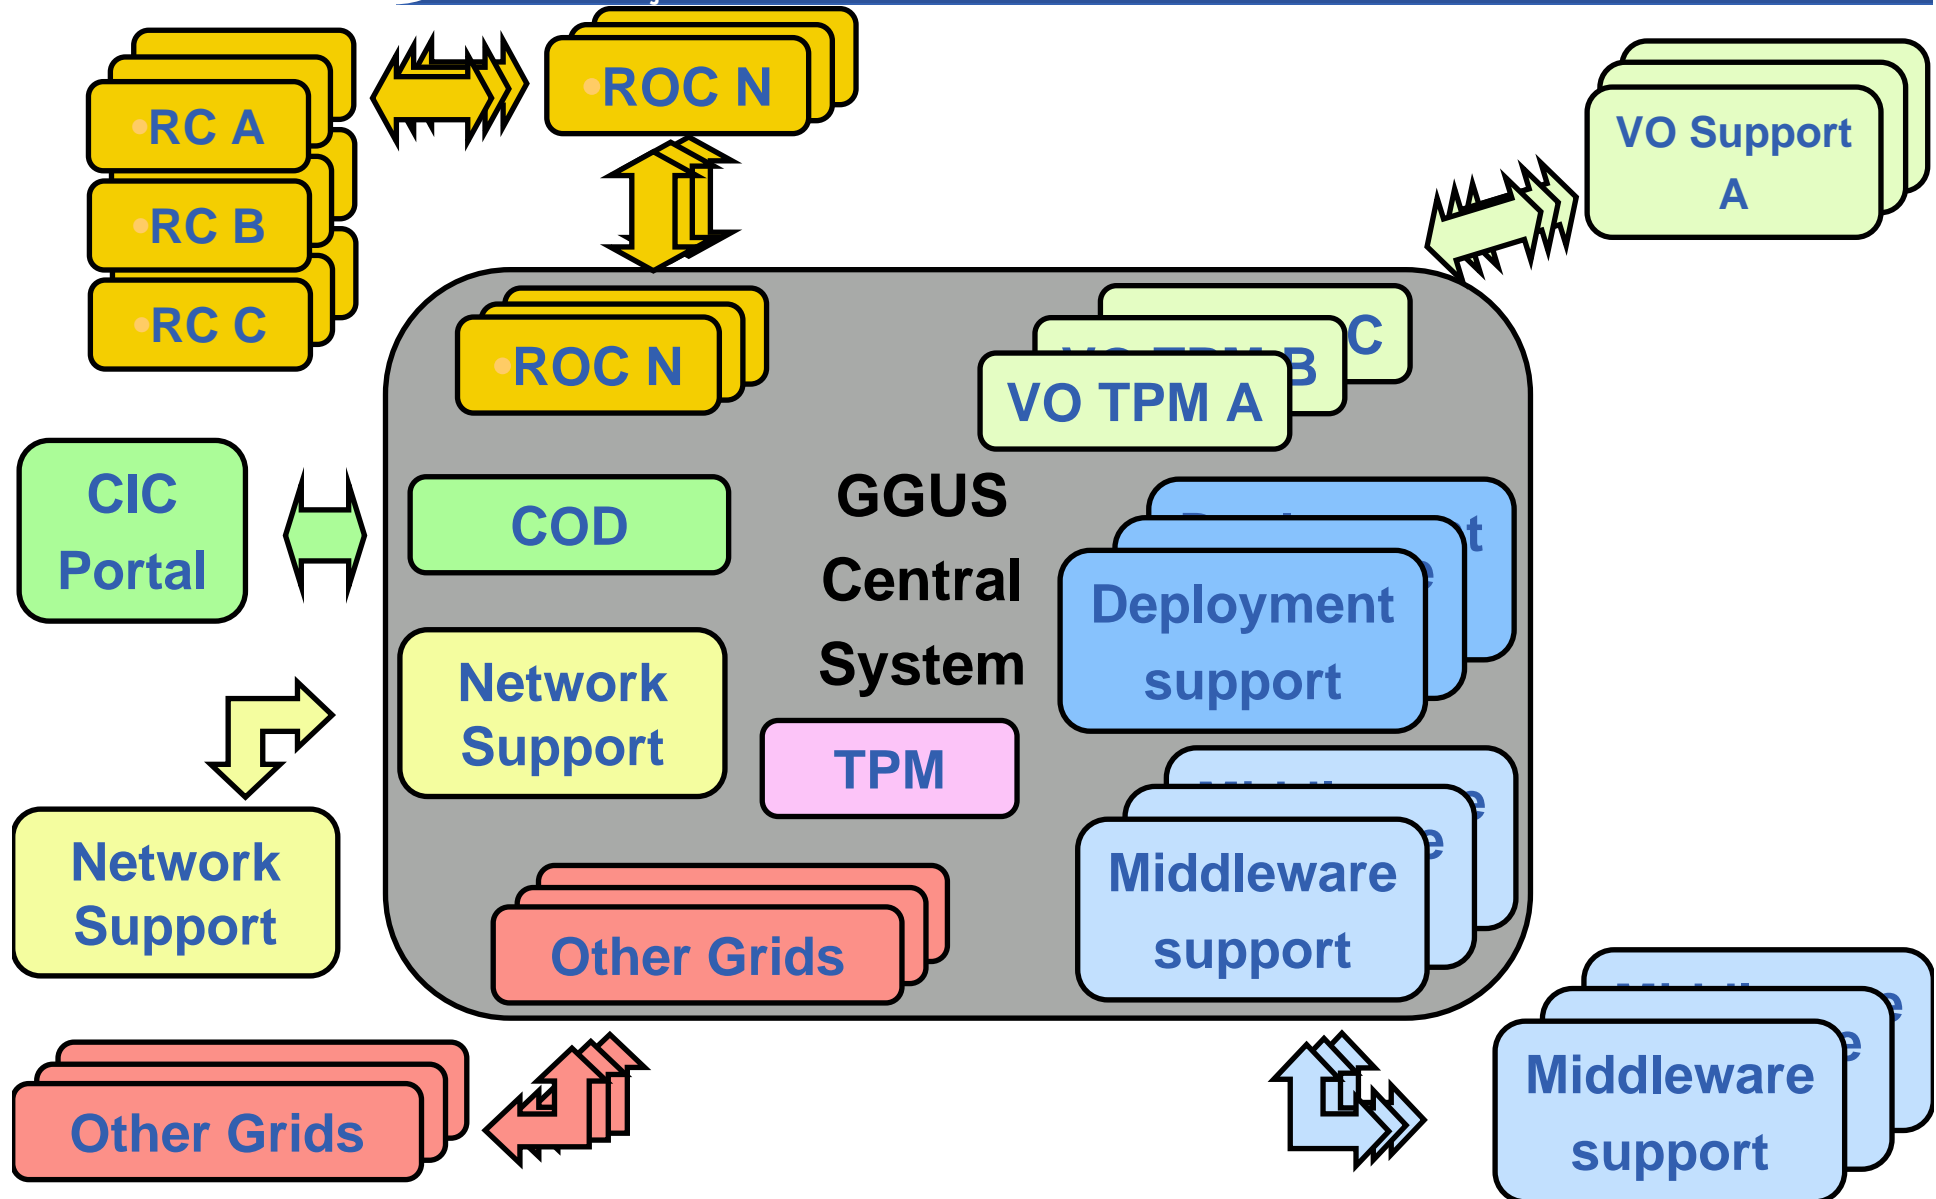

- **Distributed nature of the Grid** : experts located everywhere, sometimes in specific centres; spread of resources and services; different policies and laws
- **Variety of users** : beginners, system administrators, operators, network specialists, Virtual Organization communities
- **Variety of applications** : high energy physics, biomedical, earth observation, astrophysics, computational chemistry, etc.

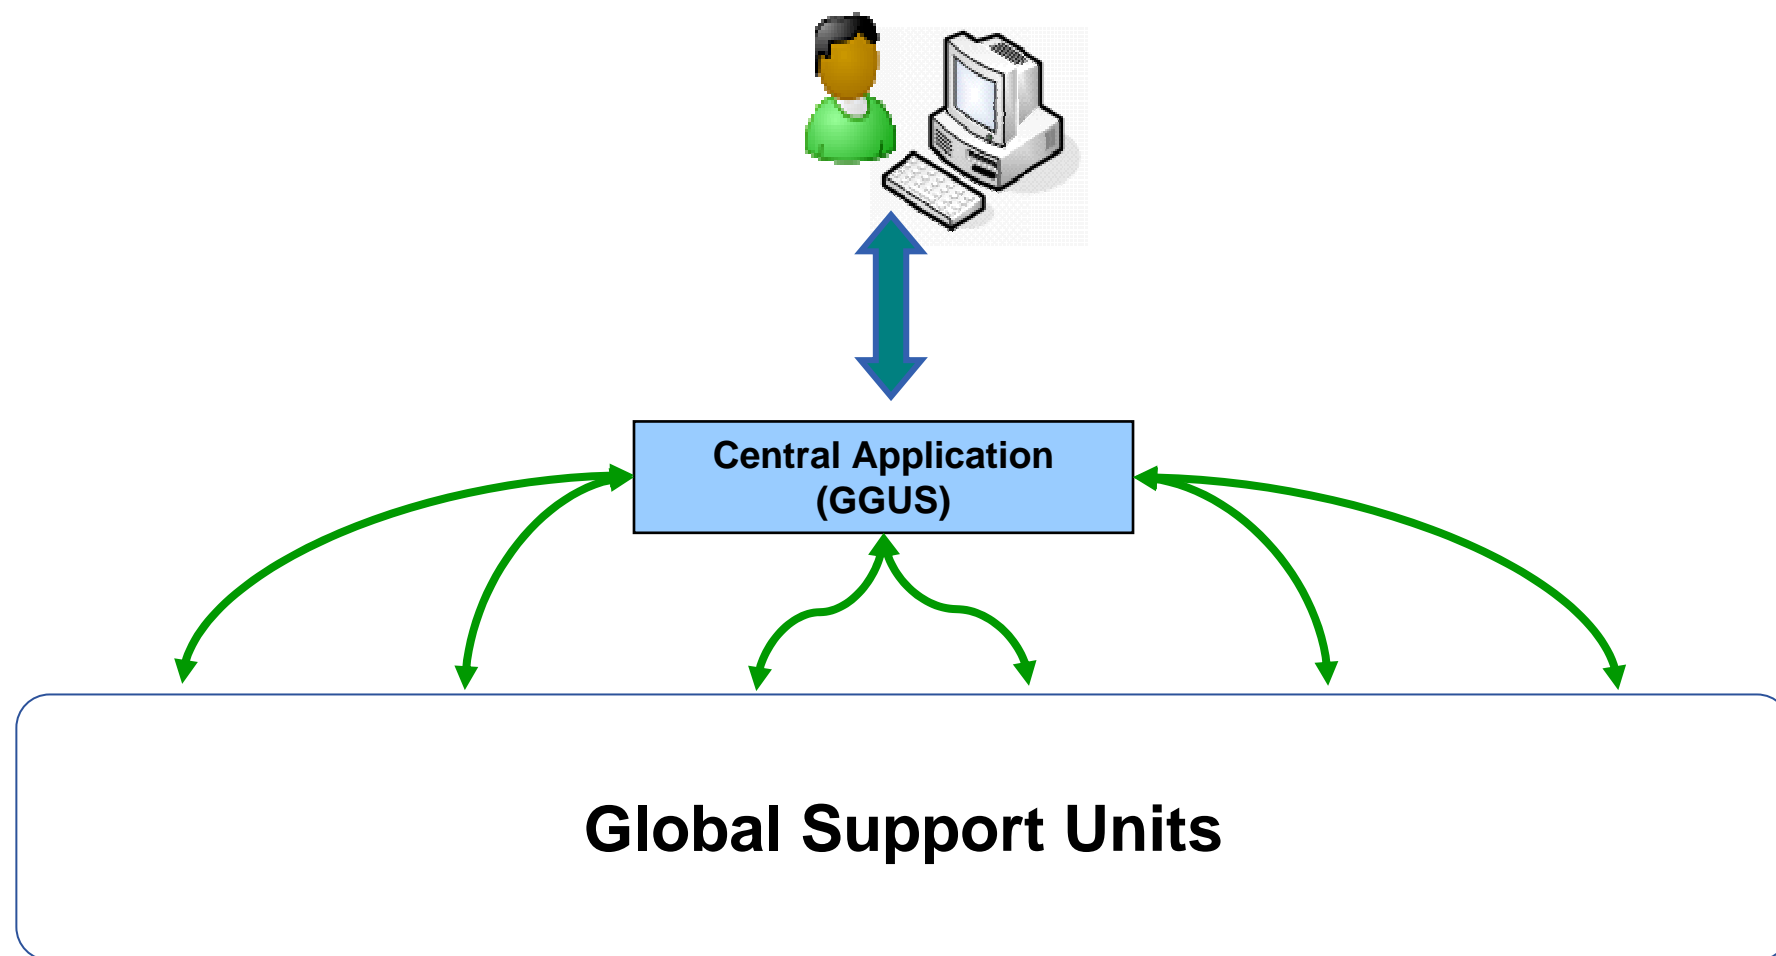

- **Global Grid User Support (GGUS) is the EGEE support infrastructure for grid users, deployment and operation problems**
- **It does not substitute but integrate existing infrastructures and coordinates support efforts**

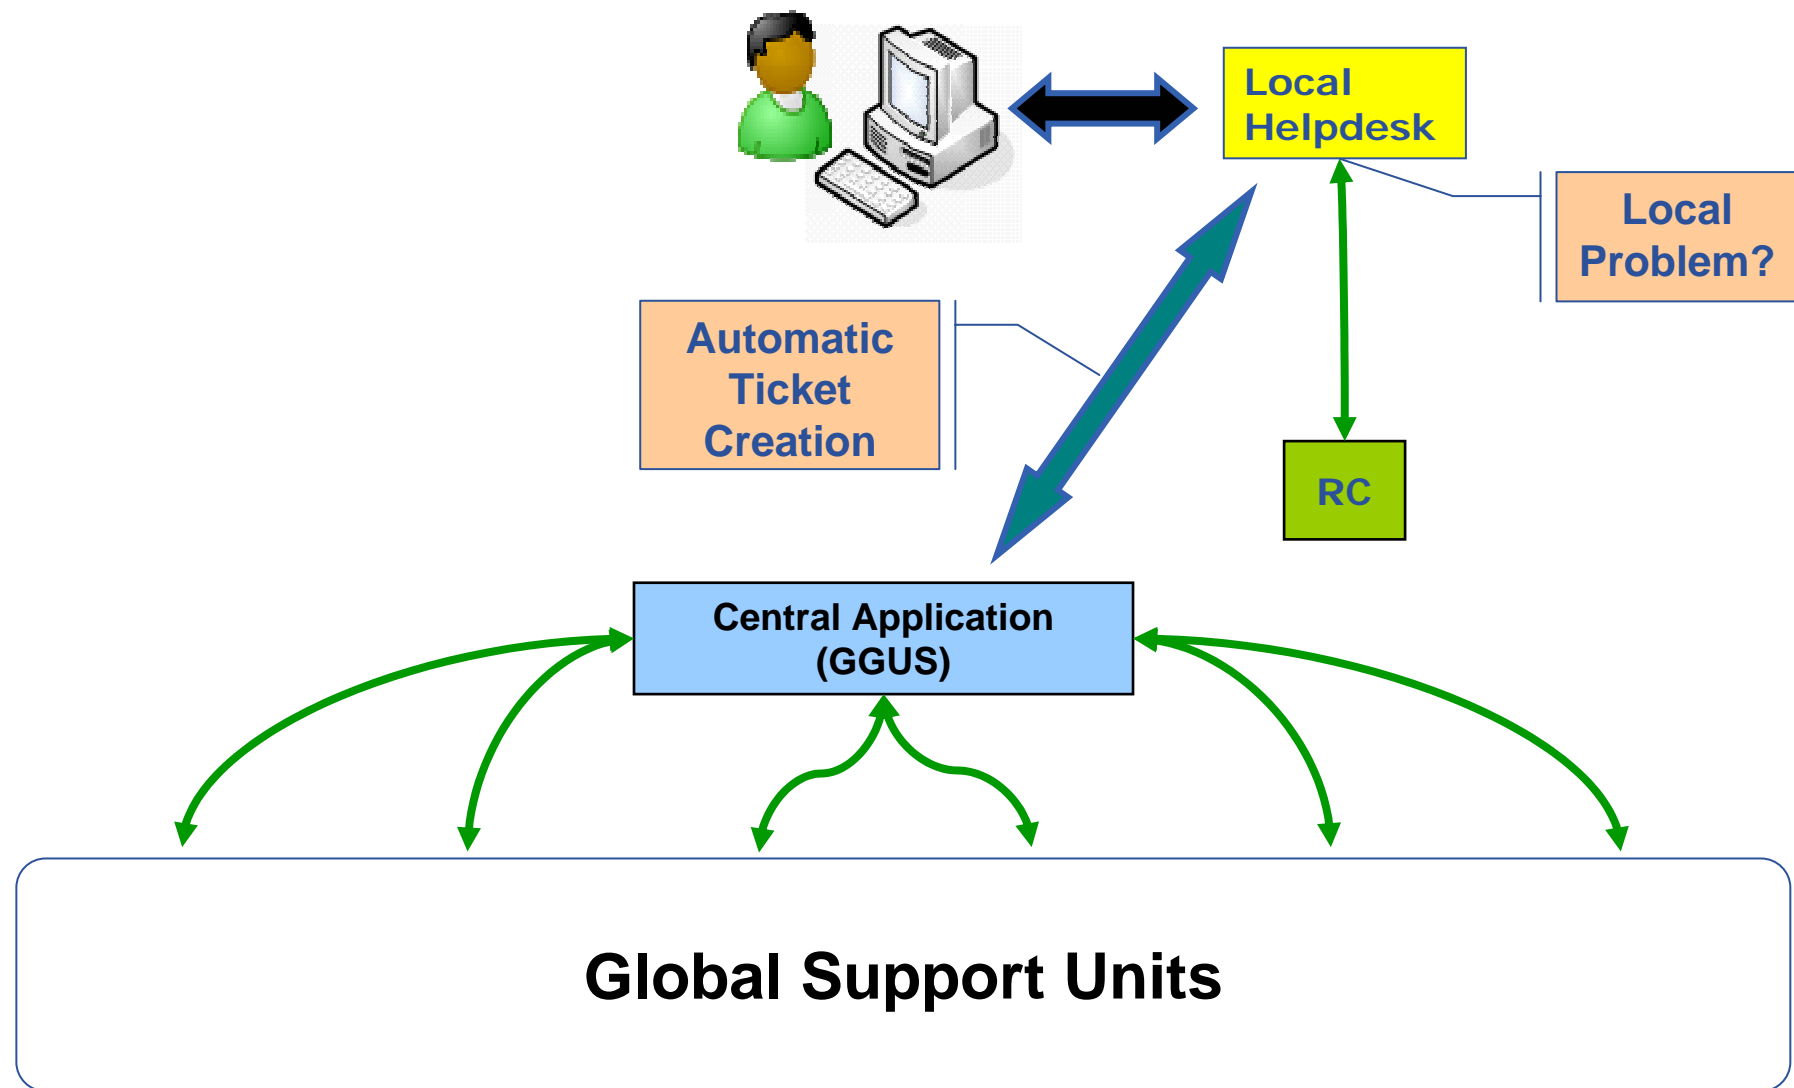

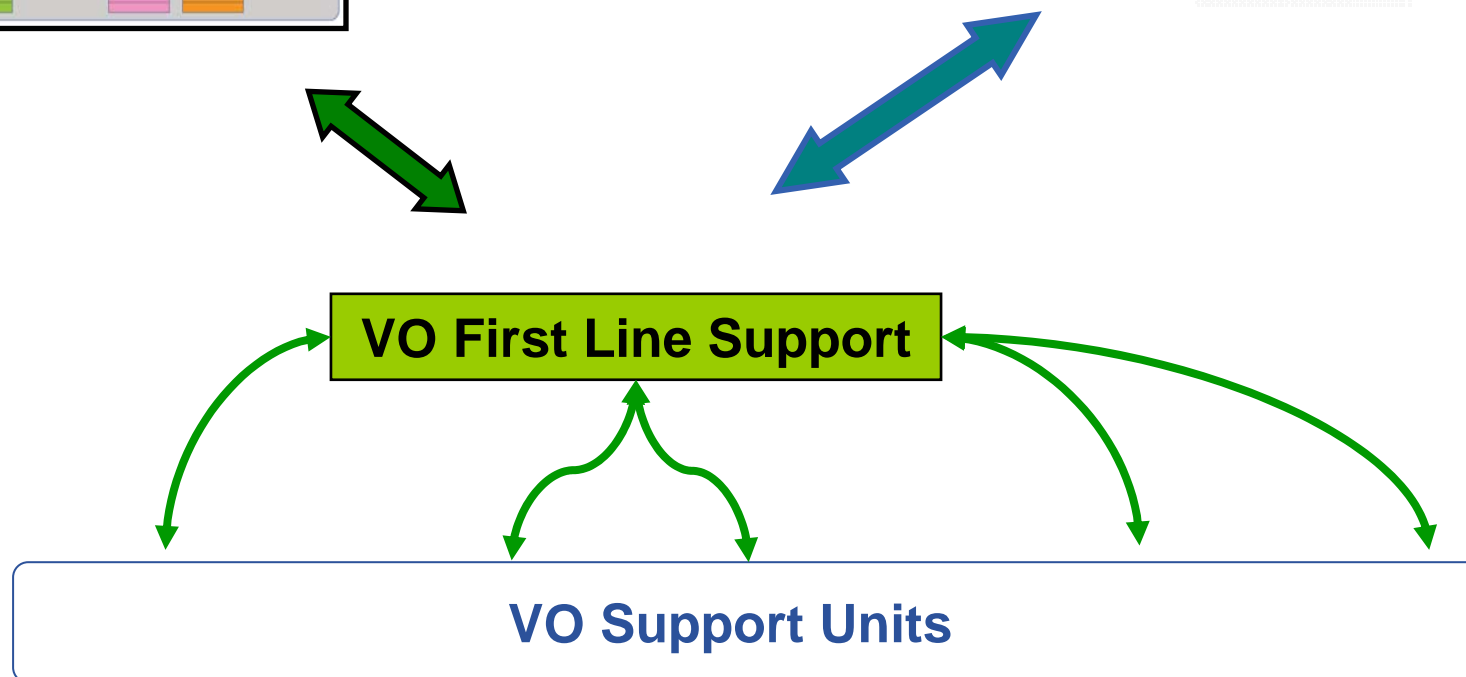

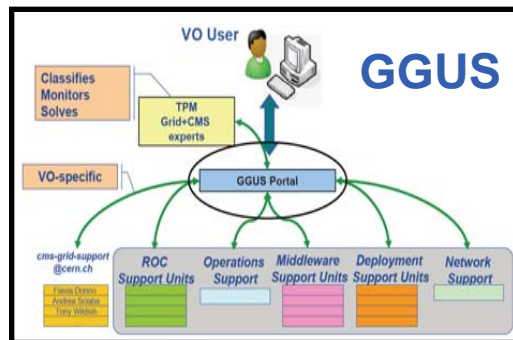

- **A single access point for support**
- **Correct, complete and responsive support**
- **A portal with well structured sources of information and documentation**
- **Tools to help resolve problems**
(search engines, monitoring applications, resources status, etc.)
- **Integrated interfaces with other grid infrastructures' support systems**

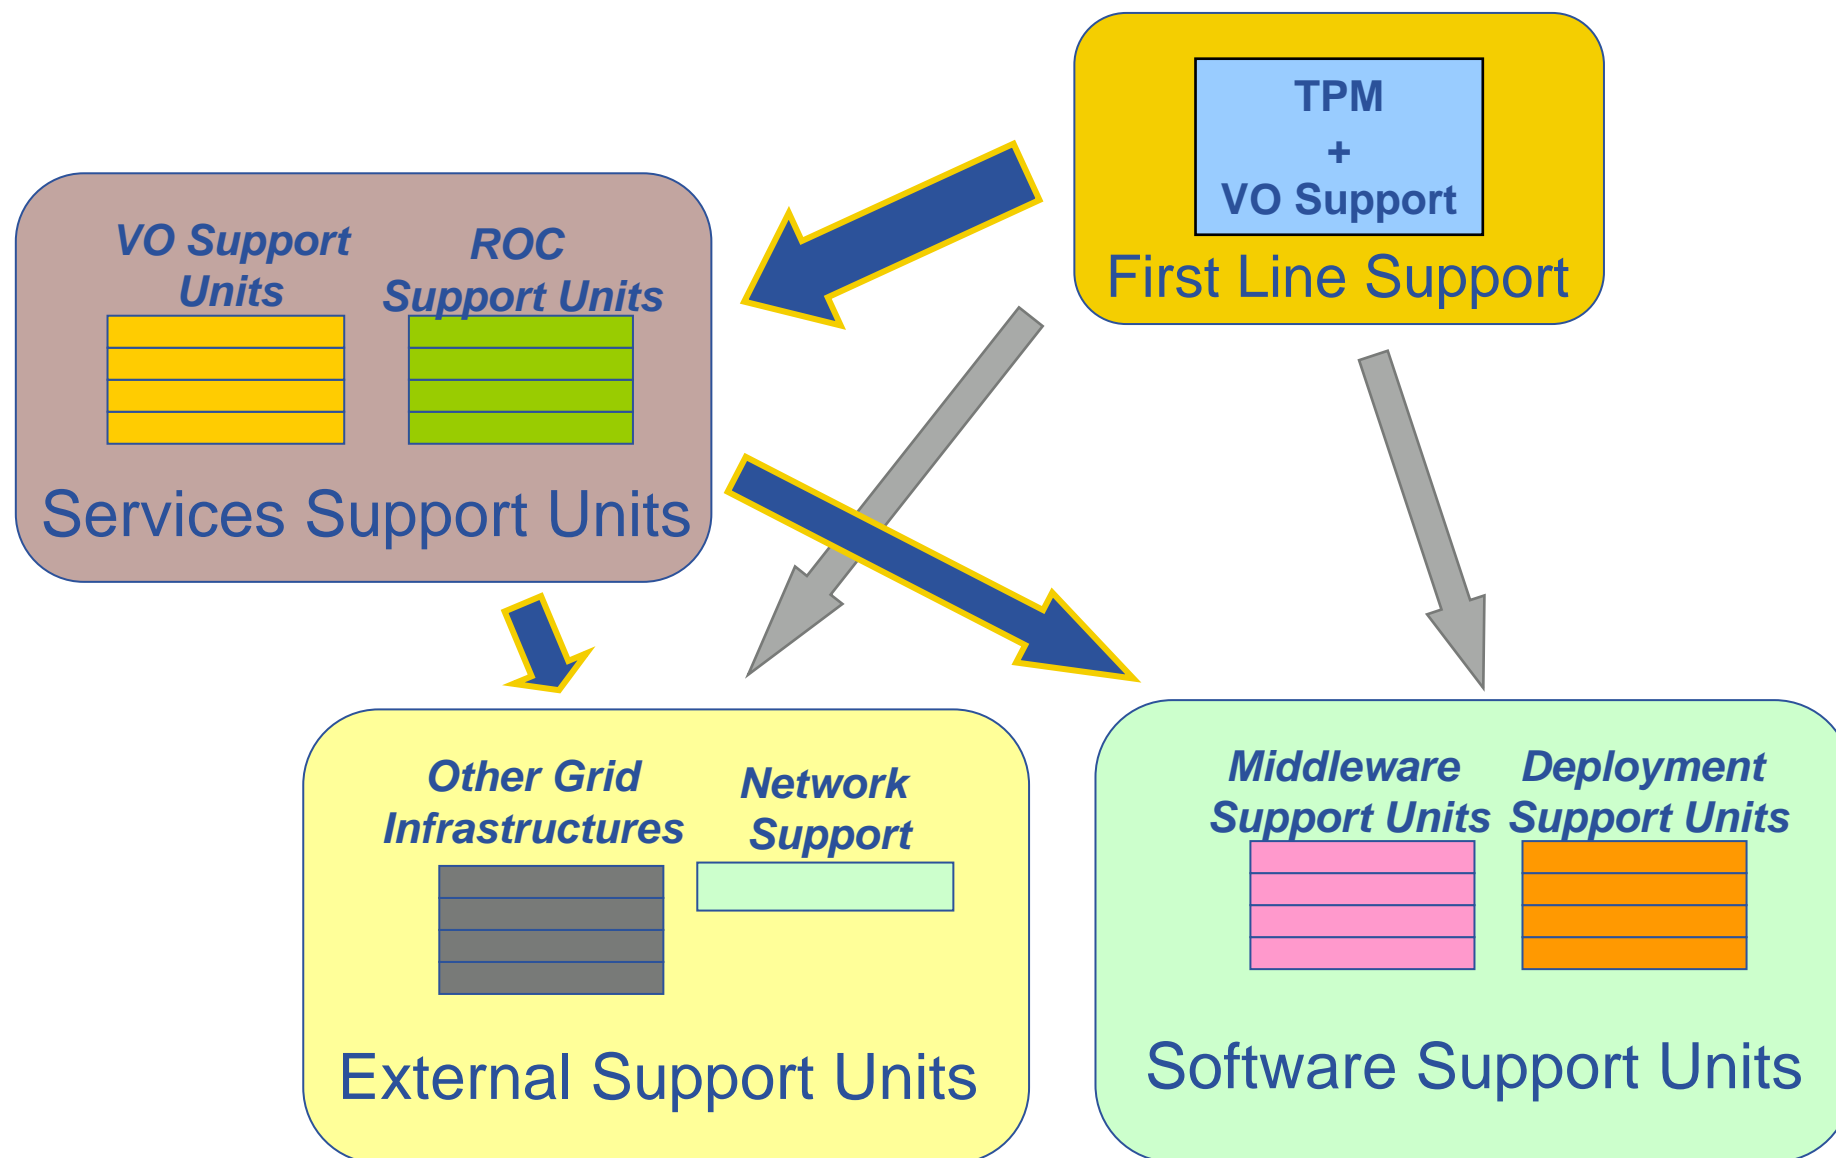

Enabling Grids for E-science

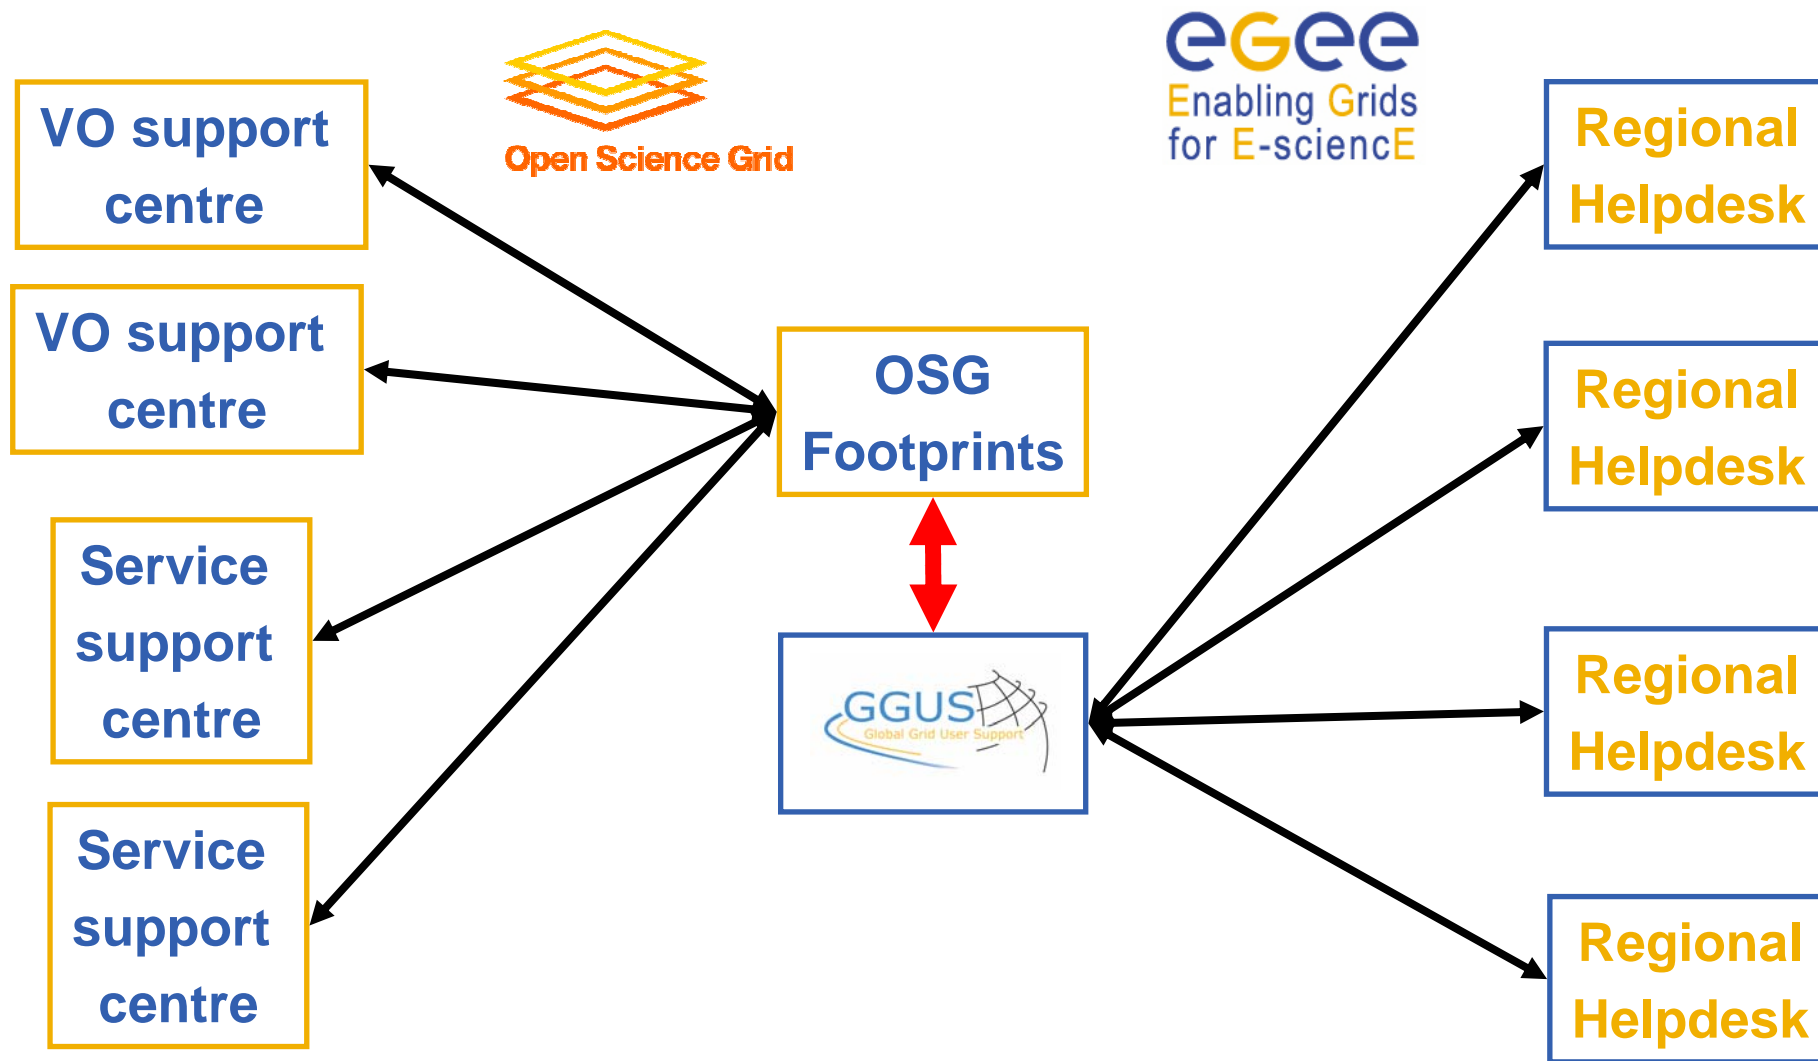

- **Ticket Processing Managers (TPM):**
grid experts as first line support
- **VO first line support**
- **Specialized Support:**
Middleware, Deployment, VO Support
- **ROCs and RCs: Local support and services**
- **ENOC: Network support**

- **Improve the turnaround time for ticket**
 - **Involve more partners in support**
 - **Improve supporters responsiveness**
 - **Improve accuracy of answers and solutions**
 - **Improve usability**
 - **Keep the support infrastructure up to date**
- **Most of these are resource issues**

- **Better integrate GGUS with the VO user support**
 - GGUS for VOs is just a small part of their overall user support
 - It is mainly used by experts
 - Better problem classification
 - Faster problem resolution
 - It is vital for scalability of the infrastructure that the VOs are involved in, if not solely responsible for the first line support for their users

- **Use knowledge management to improve the system**
 - automatic indexing of problem db, wikis, documents
 - semantic search engine
 - automatic solution suggestion
