8th FIM$_4$R meeting

3-4 February 2015
CERN
Geneva

The 8th FIM$_4$R meeting

- Future e-infrastructures: key aspect is the underlying assumption of federated identity services

- Agreements on interoperation, attributes (definition, release), policies, between all major parties (US, EU, etc.) are essential and urgent for progress and uptake

- Large science projects are global collaborations now
  - It would be a complete failure if we cannot agree a way to harmonize basic identity management

The 8th FIM$_4$R meeting

- Common issues:
  - Lots of 1-by-1 negotiation to solve issues (technical, bugs, attributes not shared)
  - IdPs and SPs still have no obligation or agreement, moral or legal, to notify other of a security incident
  - We mostly ignore LOA now so as to not complicate attribute release issues
  - Lack of participations from the SPs

The 8th FIM$_4$R meeting

- Main point to address for eduGAIN + AARC:
  - International AuthN
  - Attribute harmonization
  - Unique, non-reusable identifier for each user
  - Attribute management for AuthZ
  - Wider adoption of the CoC
  - Outreach, training material for SPs
  - Clearer contact points in eduGAIN
  - Non-web use case
  - LoA (ability to express it)
  - Logout functionality
  - Take into account lessons learnt from GN3+

The 8th FIM$_4$R meeting

- Actions for next FIM4R
  - Lots of expectations on eduGAIN and AARC progress report by next meeting?
  - Investigate "large VO entity categories?" (Alternative to attribute aggregation?)
  - Present some practical examples using the Sirtfi framework
  - Report on non-EU Data protection CoC

The 8th FIM$_4$R meeting

- Volunteer for a 9th FIM4R?

- Upcoming events:
  - RDA: 9 – 11 March 2015, San Diego
  - TNC: 15 - 18 June 2015, Porto
