

# IT Applications and Data Processing at CERN

David Abdurachmanov (Fermi National Accelerator Laboratory, US)

Justas Balčas (Vilnius University, LT)

Our Universe is Yours  
*Notre Univers est le vôtre*

# An Early “Computer”

- Wim Klein
- Calculating the 73<sup>rd</sup> root of a 500 digit number took less than 3 minutes (1976)

# Computing

- Compute
- Network
- Storage
- Technical
- Collaboration

# Bubble Chamber

- BEBC 1973-1984
- 6.3 million photos
- 3000 km of film

# Momentous Events

1960: Vacuum tubes  
1965: CDC 6600: #3

# Mainframes

New Computer Centre for a New Computer

1983: 2 CDCs and an IBM 3081

# Super Computers

1988: Cray XMP

# Comodity Computing

# Farming in a Data Centre

# Computing

- Networking

# Networking

- Packet-switched network
- 1969 ARPANET
  - US DOD sponsored research at US Universities
- 70s and 80s proliferation
  - US: NASA Science Net, CSnet, Energy Sciences Net, NSFnet
  - FR: CYCLADES
  - UK: Mark I, SERCnet
  - Commercial: Tymnet, CompuServ, BITnet, DECnet
  - Protocols: NCP, X.25, TCP/IP
  - CERnet

# Networking

- Science without borders
  - Data exchange across the iron curtain
  - 1988 first data connection between China and scientific world – IHEP to CERN
- Truly international Internet
  - 1989 first external TCP/IP connection
  - 1990 principle link US-EU from CERN
    - (1.5Mb/s)
  - 1991 80% of the internet capacity installed in Europe for international traffic was terminated at CERN

CERN DD/OC  
Information Management: A Proposal  
Tim Berners-Lee, CERN/DD  
March 1989

---

## Information Management: A Proposal

**Abstract**

This proposal concerns the management of general information about accelerators and experiments at CERN. It discusses the problems of loss of information about complex evolving systems and derives a solution based on a distributed hypertext system.

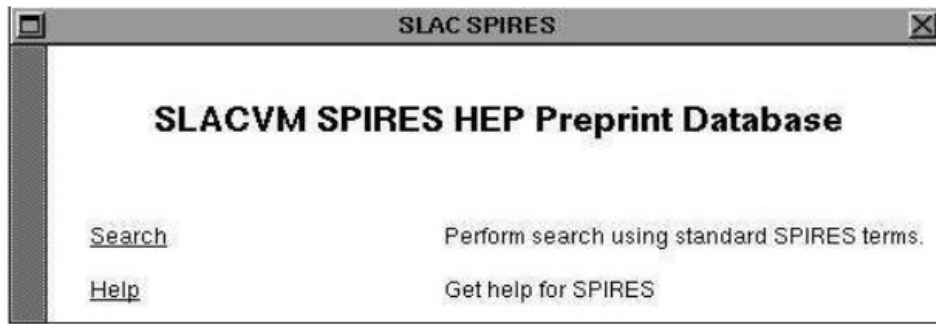

Keywords: Hypertext, Computer conferencing, Document retrieval, Information management, Project control

# Growth of the Web

- Aug 1991 went public
  - Tim Berners-Lee posted project to alt.hypertext newsgroup and other internet groups

- Dec 1991 First web server in US
- 1992 rapid expansion in HEP
  - Universities and research institutes put up web servers

## World Wide Web

The WorldWideWeb (W3) is a wide-area [hypermedia](#) information retrieval initiative aiming to give universal access to a large universe of documents.

Everything there is online about W3 is linked directly or indirectly to this document, including an [executive summary](#) of the project, [Mailing lists](#), [Policy](#), November's [W3 news](#), [Frequently Asked Questions](#).

### [What's out there?](#)

Pointers to the world's online information, [subjects](#), [W3 servers](#), etc.

### [Help](#)

on the browser you are using

### [Software Products](#)

A list of W3 project components and their current state. (e.g. [Line Mode](#), [X11 Viola](#), [NeXTStep](#), [Servers](#), [Tools](#), [Mail robot](#), [Library](#))

### [Technical](#)

Details of protocols, formats, program internals etc

### [Bibliography](#)

Paper documentation on W3 and references.

### [People](#)

A list of some people involved in the project.

### [History](#)

A summary of the history of the project.

### [How can I help?](#)

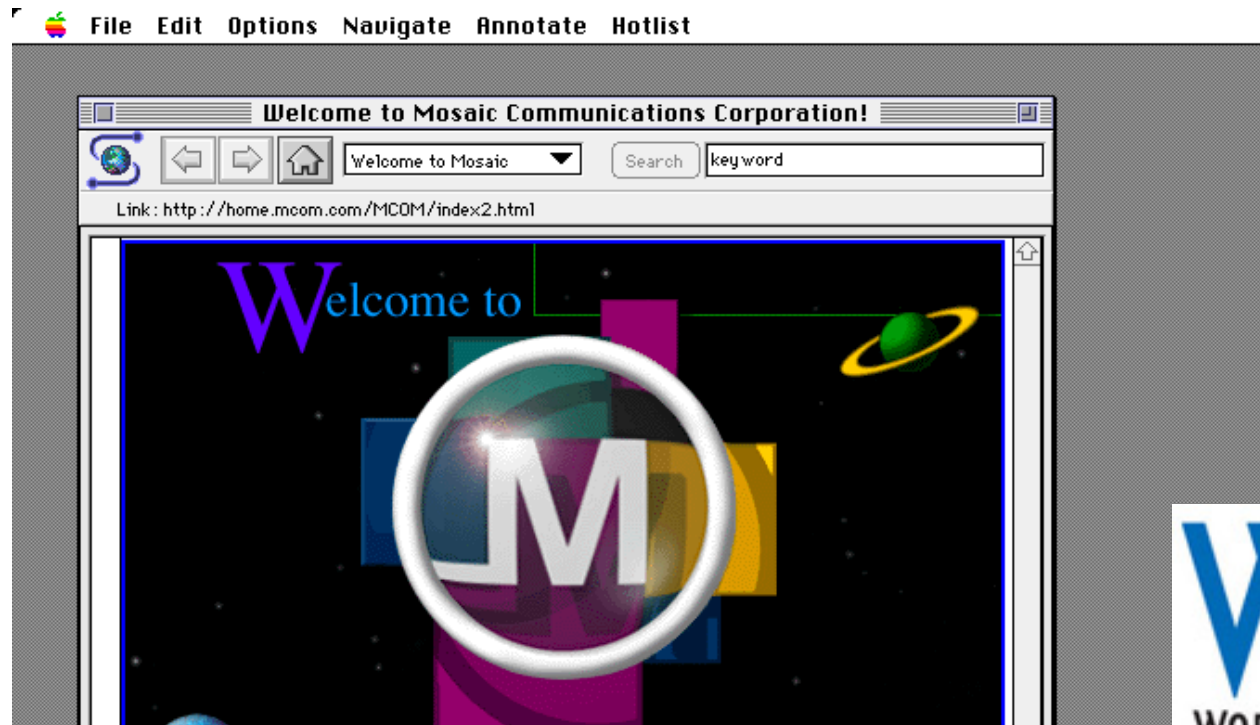

If you would like to support the web..

### [Getting code](#)

Getting the code by [anonymous FTP](#), etc.

# Growth of the Web

- 1993 rapid expansion across the world
- National Center for Supercomputing Applications (NCSA) at the University of Illinois released its Mosaic browser

# Computing

- LHC Era

# The LHC Data Challenge

# Big Data !

**150 million sensors**

Generating data 40 million times per second

→ Peta Bytes / sec !

**L1 Trigger**

Select 100,000 per second

→ Tera Bytes / sec !

**HLT / Filter**

Select 100 per second

→ Giga Bytes / sec !

# Primary Storage

80,000 Disks  
88,000 CPU Cores

18,000 1GB NICs  
2,700 10GB NICs

# Tier-0 Extension for CERN

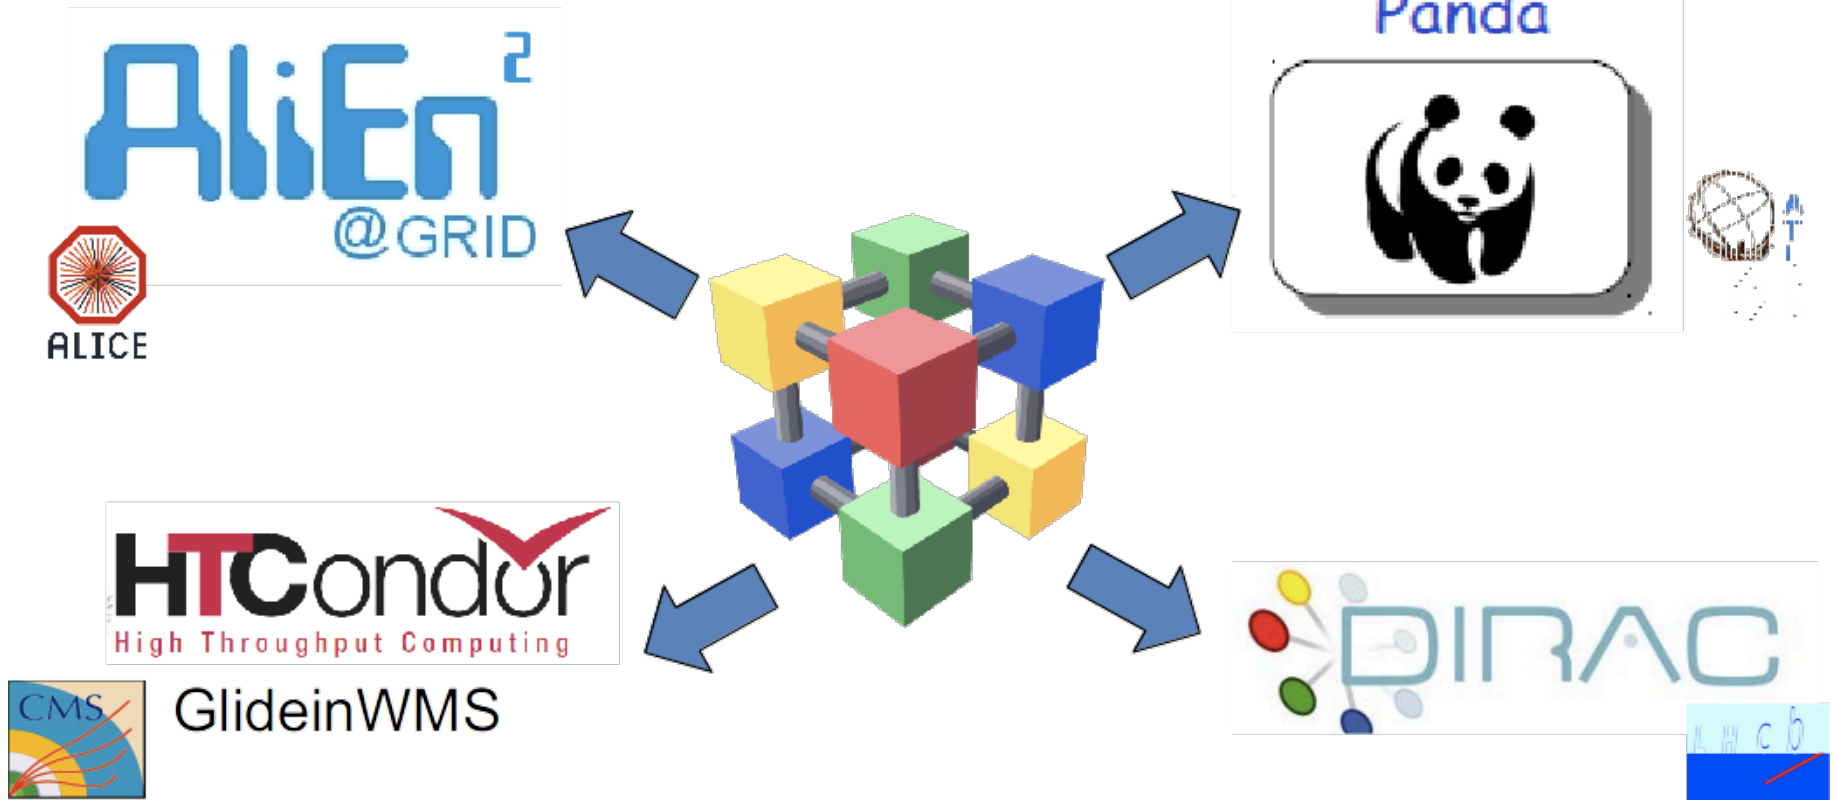

# The Grid

- Use the Grid to unite computing resources of particle physics institutes around the world

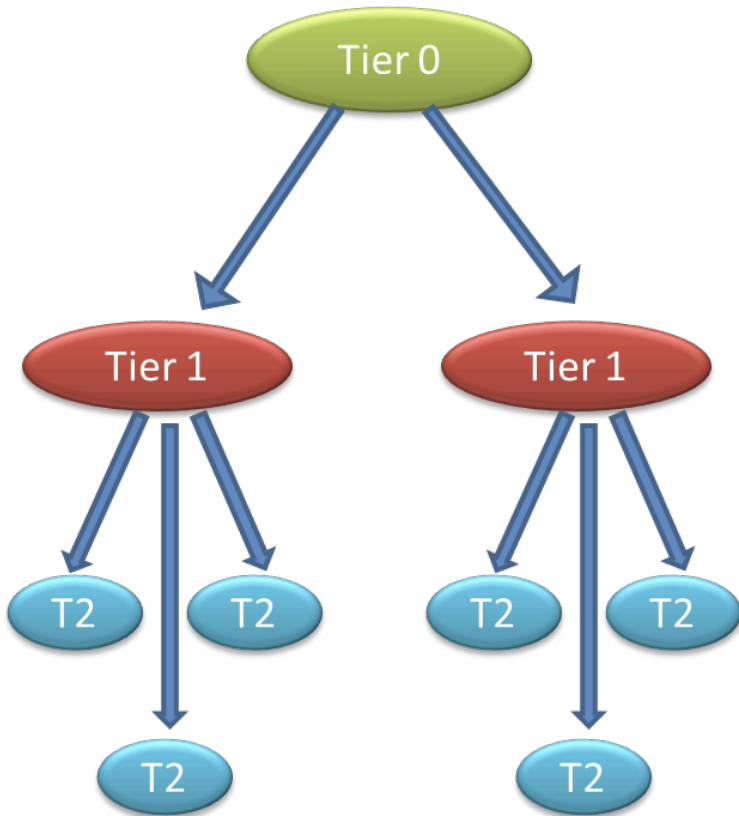

# Grid at CERN

- In all cases the underlying distributed computing architecture is similar based on “pilot” job model
  - Can we scale these systems expected levels?

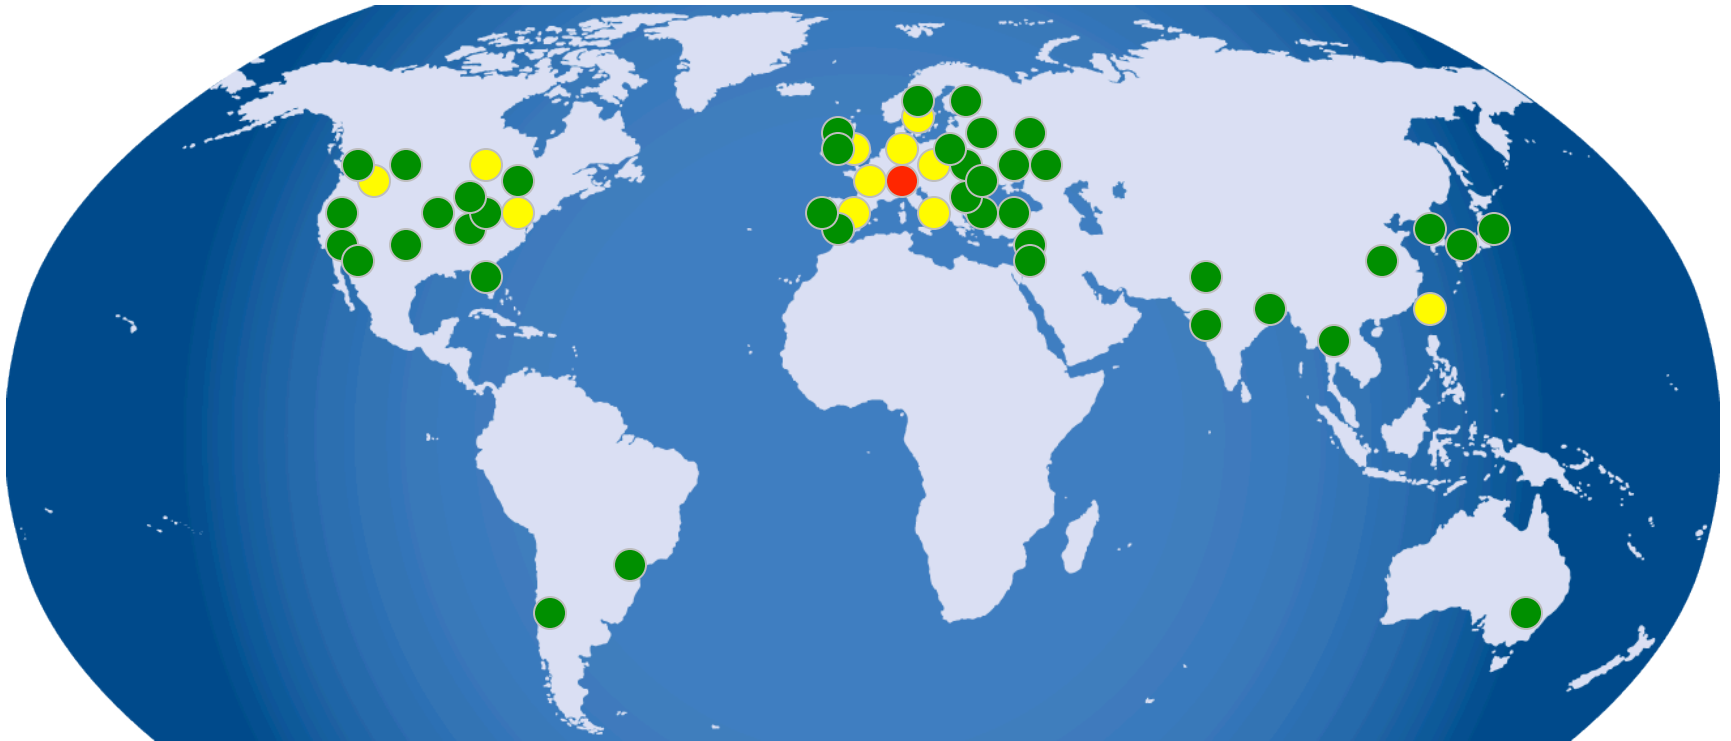

# WLCG Grid model

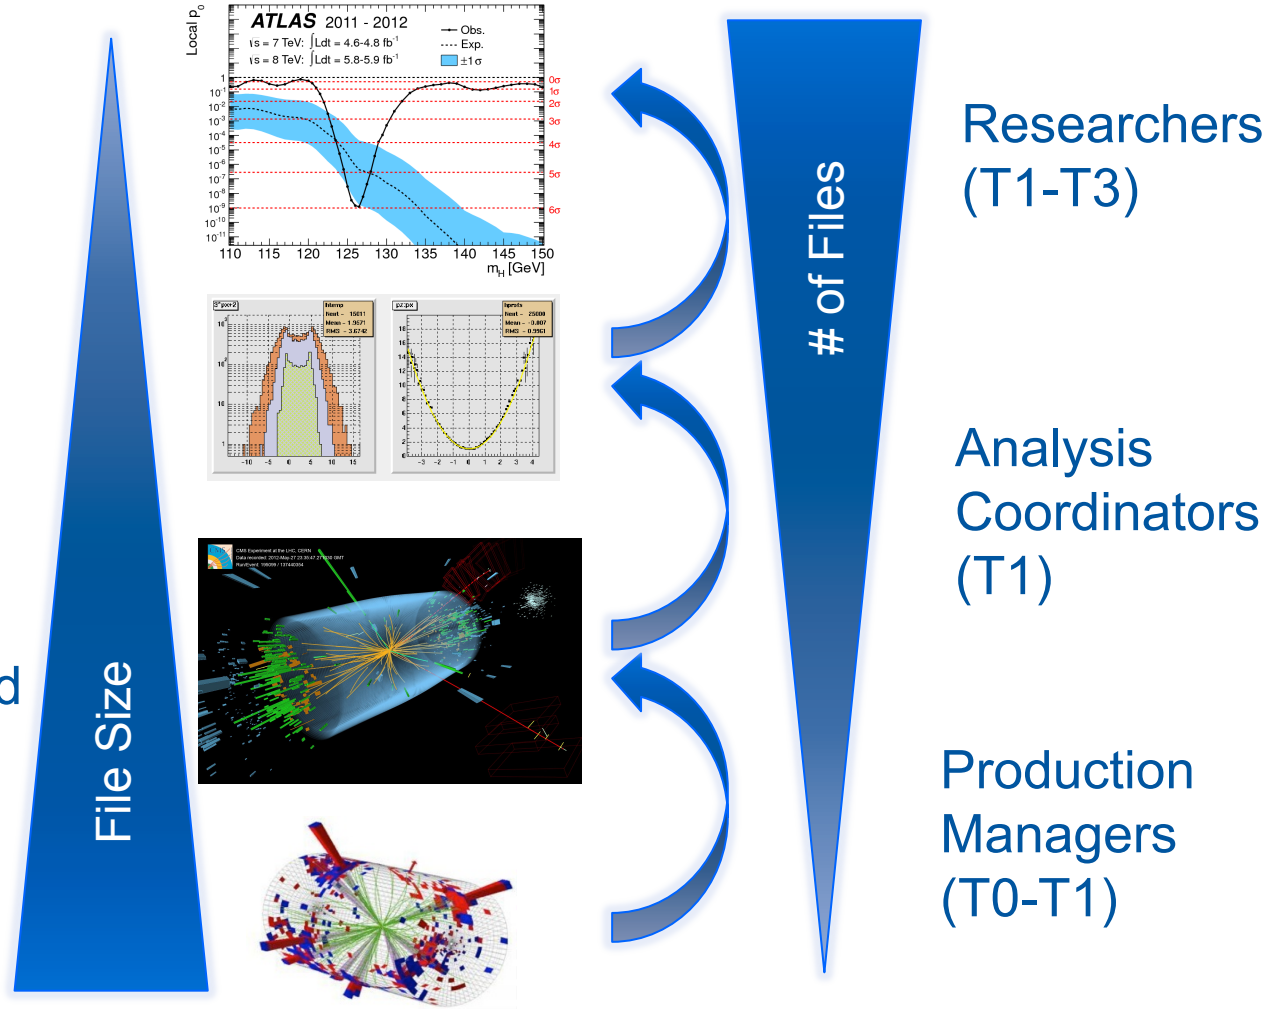

# Data Inflation

- Static storage: raw and reconstructed data
- Dynamic storage: analyzing it means transformation, reduction, transportation, replication, regeneration

# Data Reduction / Analysis

- Publication
- Reduced
- Reconstructed
- Raw

# The Grid that Never Sleeps

1/1/2014 12:01:01 am

Running jobs: 223509  
Transfer rate: 2.49 GiB/sec

Activity on 1 January 2014  
Running Jobs: 223509  
Transfer rate: ~2.5 GiB/s

# Computing

- Technical

# Open Source Software

- Intellectual Property
  - Restrictions, restrictions, ...
- Public Domain
  - A vast common good
  - Use, enjoy, share and build upon
  - IP expired, forfeited or inapplicable

# CMS Software

- Over 5 million lines of custom code
  - Developed over the last two decades
  - Over 1300 researches ranging from MSc students to Nobel prize candidates
  - Small core of professional software engineers mostly doing application framework, release integration and QA
  - Open source software (available on GitHub)
- Large working dataset
  - ~12 PB of RAW data acquired in 2011-13, more than double that if we count the processed via the WLCG using 100 000 cores sparse over 5 continents
  - We expect a 2-3 order of magnitude increase in data volume in the next 10 - 15 year

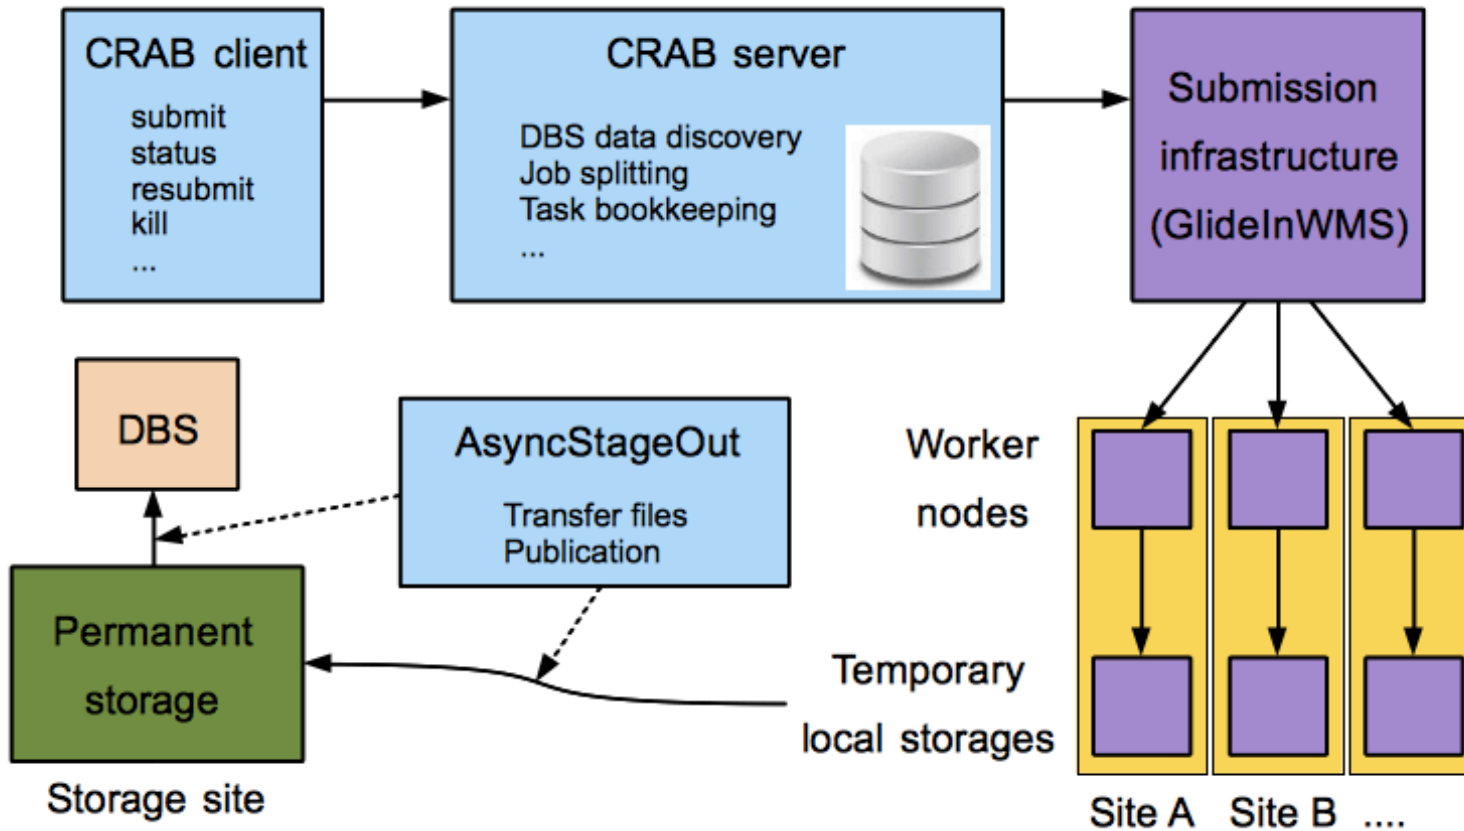

# Users analysis (CRAB3)

- What is CRAB ?
  - CRAB: CMS Remote Analysis Builder.
  - In a few very generic words, CRAB is the software & hardware infrastructure used by CMS to submit jobs to the LHC Computing Grid.

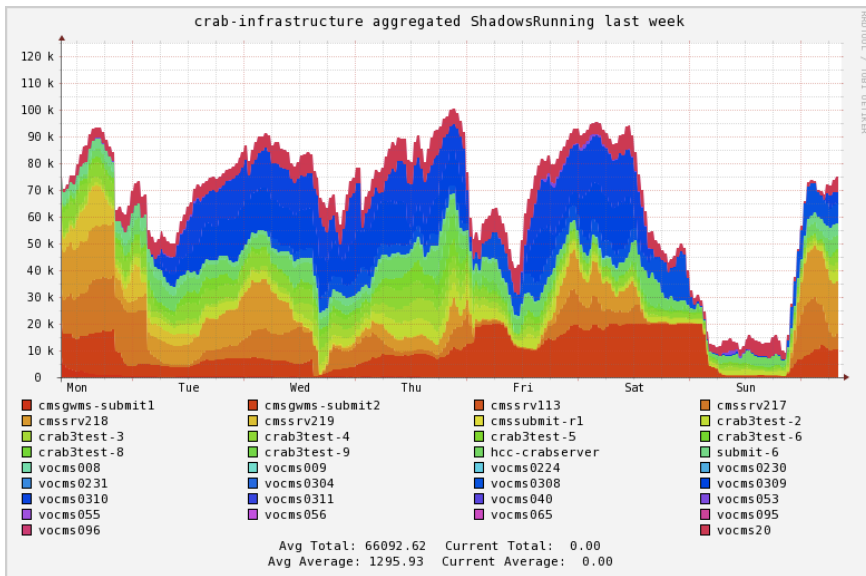

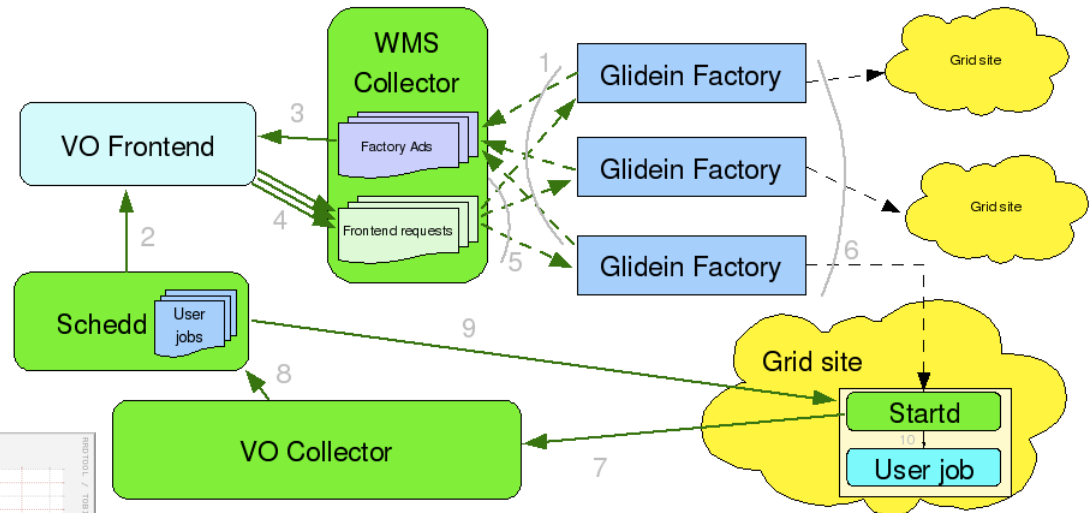

# Users analysis (CRAB3)

*AAA (Any time, Any place, Any where)*

# Who runs jobs on the Grid?

- WMAgent
  - Workload Manager Agent
- CRAB3
  - CMS Remote Analysis Builder

- Volunteer Computing:
  - CMS@Home
  - Amazon Cloud (EC2)

# Computing

- Collaboration

# Videoconference

- 250 meeting rooms of all sizes on site
  - 90 equipped for video conference
    - Legacy + Vidyopanorama
  - 13 equipped for VC + Webcast
- 500 legacy endpoints worldwide
  - Non centrally managed

# CERN Vidyo Worldwide Service

- 3200 meetings/month
- 852 simultaneous connections
- 252 in one meeting
- 50M minutes last year / 40k downloads

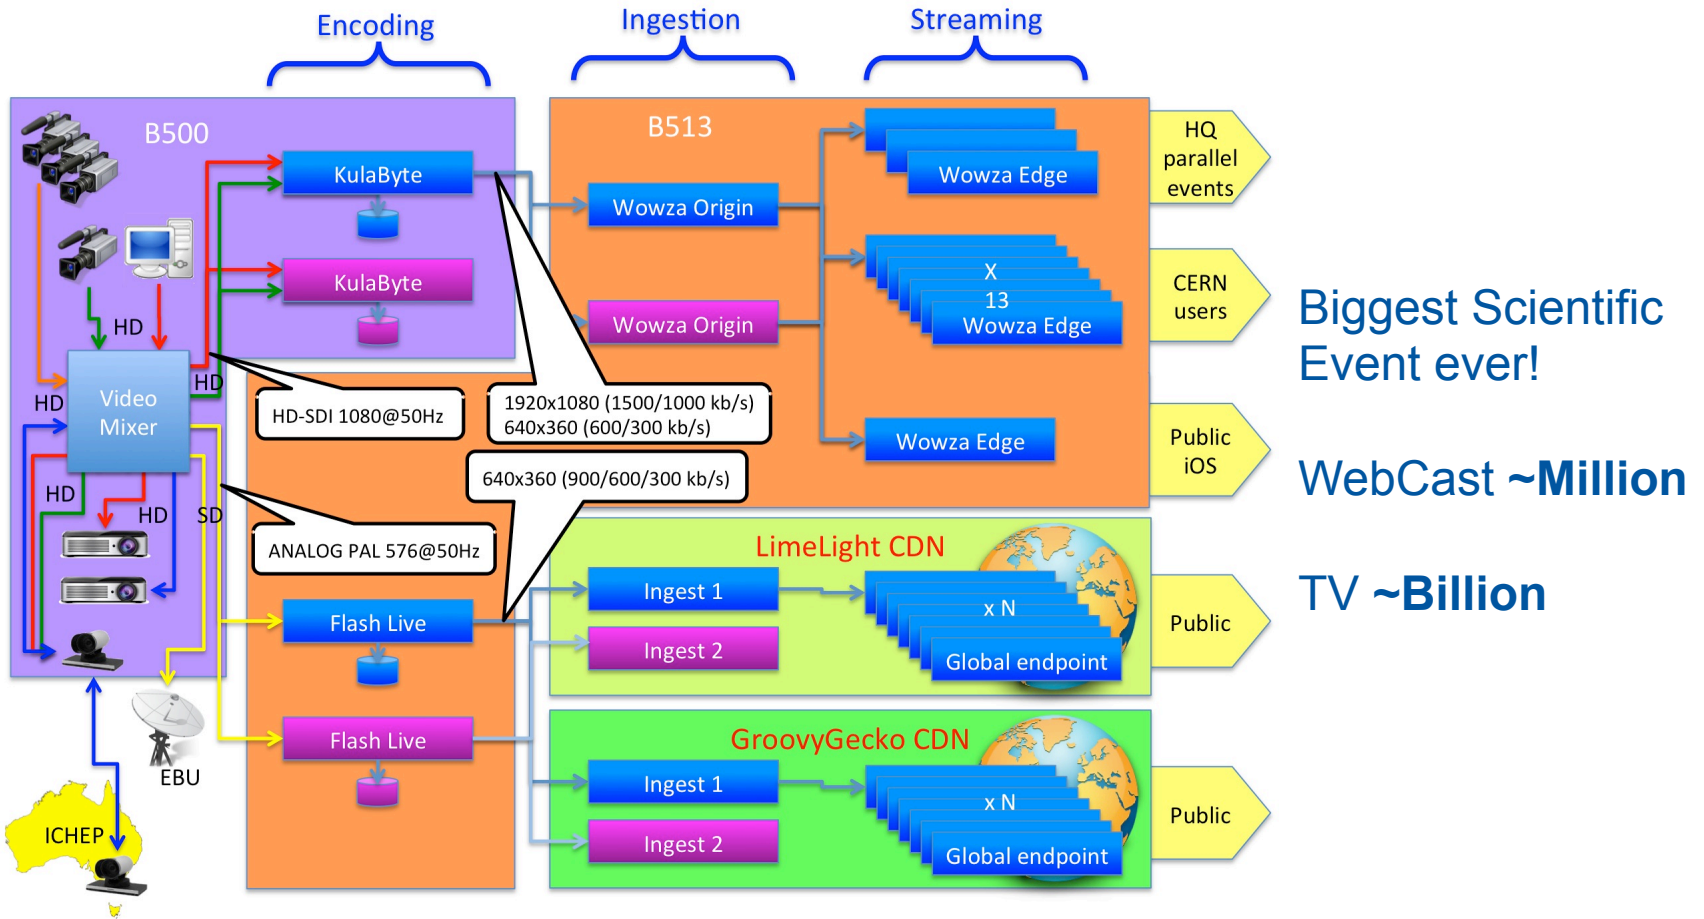

# CERN's social media
