The HEP Software Foundation

Thursday, August 6, 2015 2:52 PM (13 minutes)

The HEP Software Foundation (HSF) has recently been established as a HEP community organization to facilitate coordination and common efforts in HEP software and computing internationally. The objectives of the HSF include the sharing of expertise, raising awareness of existing software and solutions, catalyzing new common projects, aiding developers and users in creating and using common software, supporting career development for software and computing specialists, and facilitating connections with other science fields. This talk will describe the HSF and how you can become involved. Learn more at hepsoftwarefoundation.org.

Oral or Poster Presentation

Oral

Primary author: WENAUS, Torre (Brookhaven National Laboratory (US))

Presenter: WENAUS, Torre (Brookhaven National Laboratory (US))

Session Classification: Accelerators, Detectors, Computing

Track Classification: Computing
