The International Particle Physics Outreach Group

Friday 7 August 2015 16:00 (20 minutes)

The International Particle Physics Outreach Group (IPPOG) contributes to global efforts in public outreach and science education that support particle physics. Membership includes scientists, researchers, science educators and explainers from prominent laboratories and institutions engaged in particle physics. IPPOG supports International Masterclasses in which annually about 10,000 high school students in 42 countries come to one of about 200 nearby universities or research centers for one day to unravel the mysteries of particle physics. The online IPPOG Resources Database, a repository of activities, programs, events and resources. We encourage members of the particle physics community to make contributions to the database and search the contents for outreach ideas.

Oral or Poster Presentation

Oral

Author: BARDEEN, Marjorie (Fermilab)

Presenter: BARDEEN, Marjorie (Fermilab)

Session Classification: Education and Outreach

Track Classification: Education and Outreach
