Advancing the Era of Quantitative QCD: Experiment

Wednesday, August 5, 2015 11:20 AM (35 minutes)

With rapid theoretical progress in QCD ongoing since the mid-1990s, experiment and theory have been pushing forward hand-in-hand, with theoretical advances allowing more and more to be learned from the wealth of experimental data, while novel experimental results in turn inspire new theoretical ideas. As various sub-fields in QCD have advanced and evolved, new questions and directions have arisen at the frontiers, and some research areas that were once disparate have started to converge. A snapshot of some recent experimental results and the outlook for continuing to confront the challenges and surprises of strong interactions will be presented.

Oral or Poster Presentation

Oral

Primary author: Prof. AIDALA, Christine (University of Michigan)

Presenter: Prof. AIDALA, Christine (University of Michigan)

Session Classification: Session II-B

Track Classification: Plenary sessions
