Vector boson production in association with jets and heavy flavor quarks at CMS

Tuesday, 4 August 2015 17:20 (20 minutes)

The production of vector bosons ($V = W, Z$) in association with jets is a stringent test of perturbative QCD and is a background process in searches for new physics. Total and differential cross-section measurements of vector bosons produced in association with jets and heavy flavour quarks in proton-proton collisions performed by the CMS collaboration at the LHC are presented. The measurements are compared to the predictions of event generators and theoretical calculations at next-to-leading order.

Oral or Poster Presentation

Oral

Primary author: BARBERIS, Emanuela (Northeastern University, CMS Collaboration)

Presenter: BARBERIS, Emanuela (Northeastern University, CMS Collaboration)

Session Classification: QCD and Heavy Ions

Track Classification: QCD Experiment
