## T-duality off shell in 3D Type II superspace

*Friday, 7 August 2015 16:25 (20 minutes)*

We give the manifestly T-dual formulation of the massless sector of the classical 3D Type II superstring in off-shell 3D  $N = 2$  superspace, including the action. It has a simple relation to the known superspace of 4D  $N = 1$  supergravity in 4D M-theory via 5D F-theory. The prepotential appears as part of the vielbein, without derivatives.

### Oral or Poster Presentation

Oral

**Primary authors:** Mr POLACEK, Martin (PhD student); Prof. SIEGEL, Warren (Stony Brook University)

**Presenter:** Mr POLACEK, Martin (PhD student)
