## Recent CMS searches for exotic phenomena beyond the Standard Model

*Thursday, August 6, 2015 4:00 PM (15 minutes)*

Many scenarios of physics beyond the Standard Model predict exotic phenomena, such as leptoquarks, magnetic monopoles, extra dimensions, and heavy neutrinos. Such phenomena may be identified by various signatures, including a momentum imbalance in the event; a decay displaced from the interaction point; or a resonance of leptons, jets, or photons. This talk presents the results of recent exotics searches by the CMS experiment at the LHC.

### Oral or Poster Presentation

Oral
