Higgs Production Modes

- For the Associated Higgs Production with Top Quark Pairs or Single Top Quark in the diphoton channel, there is a dedicated team from HSG1 ($H \rightarrow \gamma\gamma$) and HSG8 (tH/ttH)..
- I am going to be involved with the tH/ttH($H \rightarrow \gamma\gamma$) analysis during my rest stay at CERN, and hopefully make some contributions.
- Today, I will present my studies on the physics background behind tH/ttH and show sensitivity projectionplots for tH/ttH($H \rightarrow \gamma\gamma$) in Run II.
- At the end, I will report my progress on
 - The HGamma General Classification Tool
 - The Overlap Removal Handler for the HGamma Analysis Framework

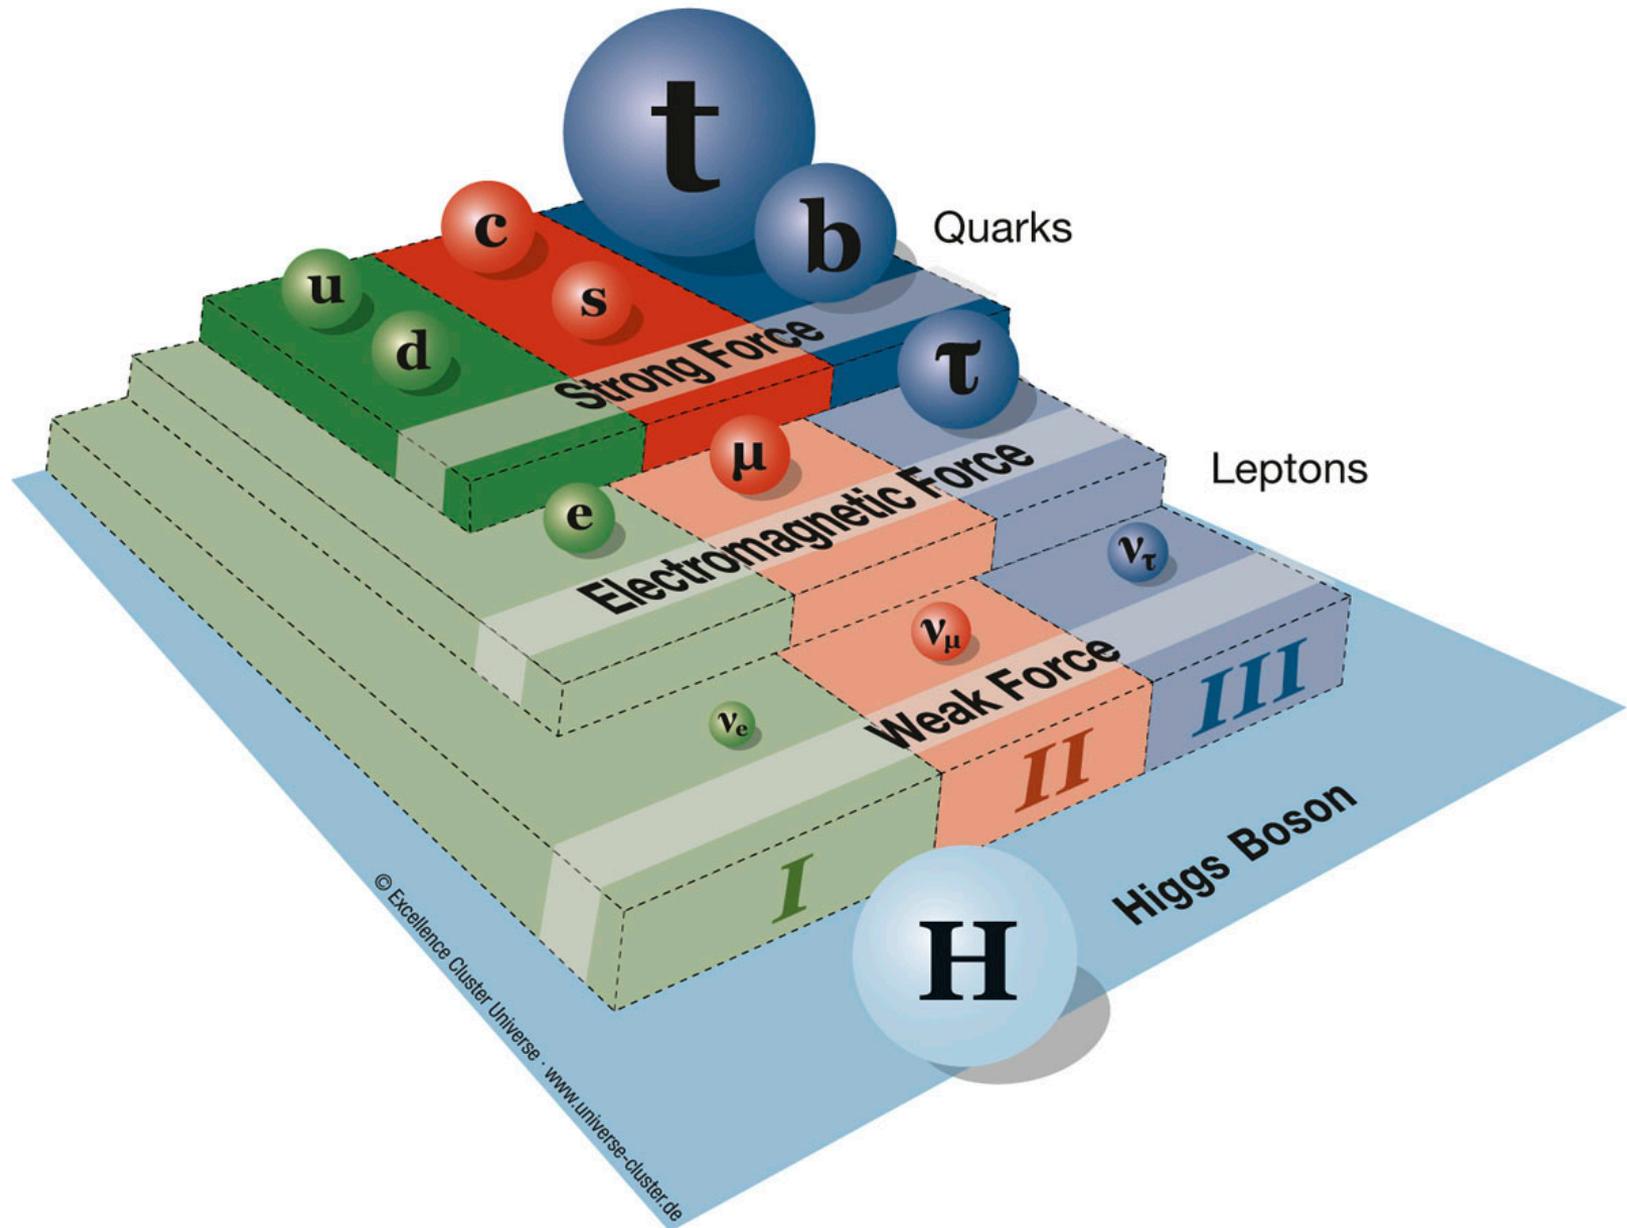

- The Yukawa interaction describes the coupling between the Higgs field and massless quark and lepton fields.
- Through spontaneous symmetry breaking, these fermions acquire a mass proportional to the vacuum expectation value (VEV) of the Higgs field.
- In the Standard Model, the Yukawa coupling to a fermion is proportional to the mass of the fermion^[1]:

$$Y_f = \frac{m_f \cdot \sqrt{2}}{VEV}$$

Top Quark Mass

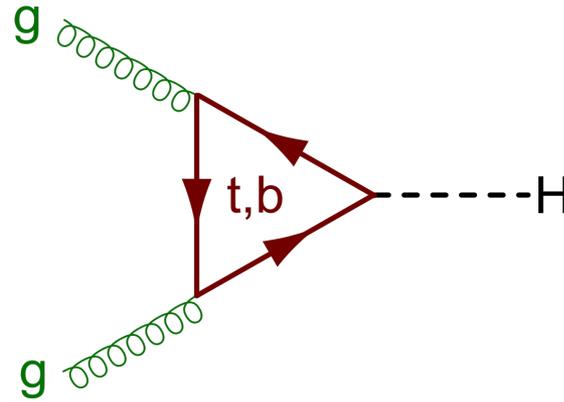

Top Quark Mass

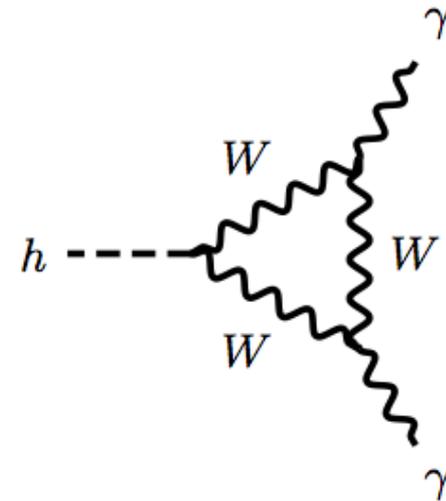

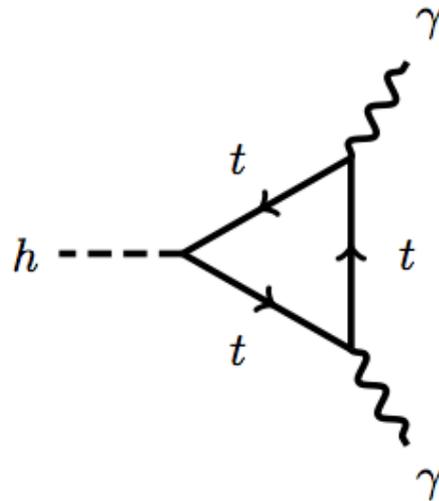

- Because the top quark is very heavy, its predicted Yukawa coupling to the Higgs boson, Y_t^{SM} , would be very large in comparison to other fermion Yukawa couplings.
- Hence, the measurement of Y_t is important for understanding Electroweak Symmetry Breaking and testing theories beyond the standard model.

Indirect Measurement of Y_t

- $gg \rightarrow H$

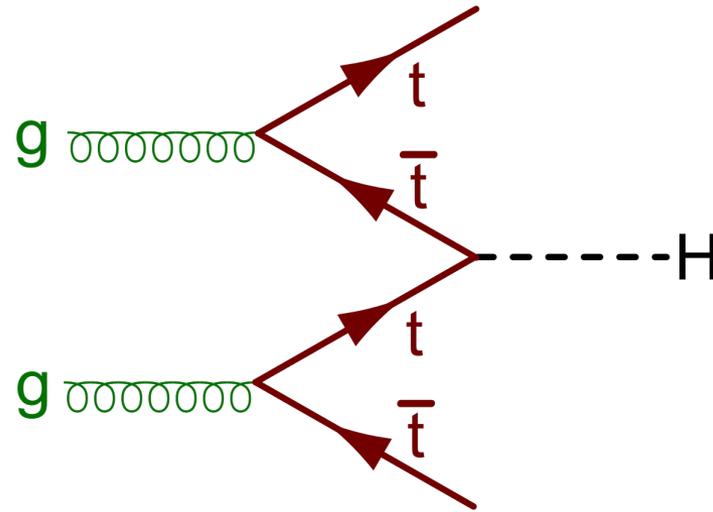

- $H \rightarrow \gamma\gamma$

Direct Measurement of Y_t

- Associated Higgs Production with Top Quark Pairs

The production cross section of ttH is proportional to Y_t squared. Thus, ttH can only directly measure the magnitude of Y_t but not the relative sign of Y_t .

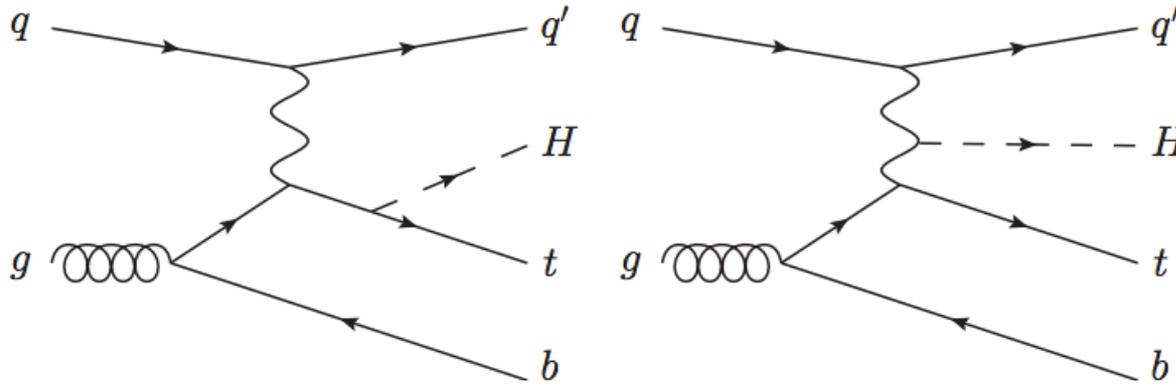

Scale Factor:

$$K_t = \frac{Y_t}{Y_t^{SM}}$$

Direct Measurement of Y_t

- Associated Higgs Production with Single Top Quark

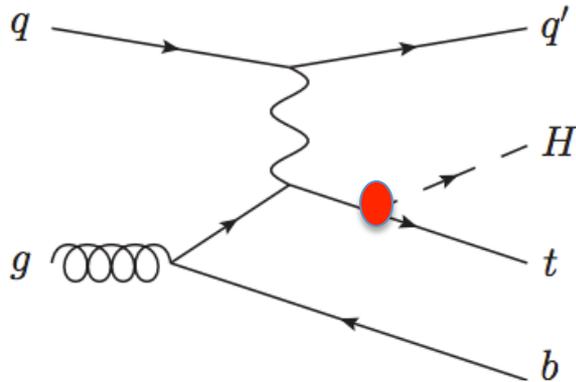

tHqb

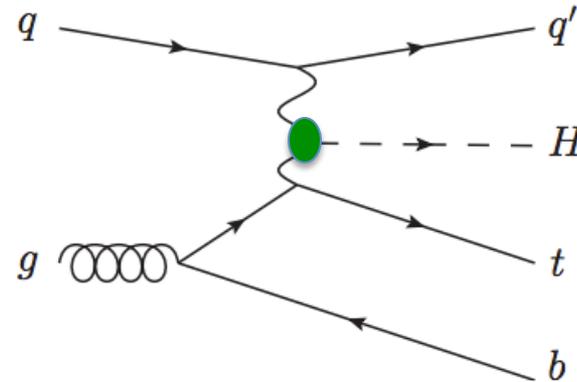

Direct Measurement of Y_t

- Associated Higgs Production with Single Top Quark

tHqb

proportional to Y_t

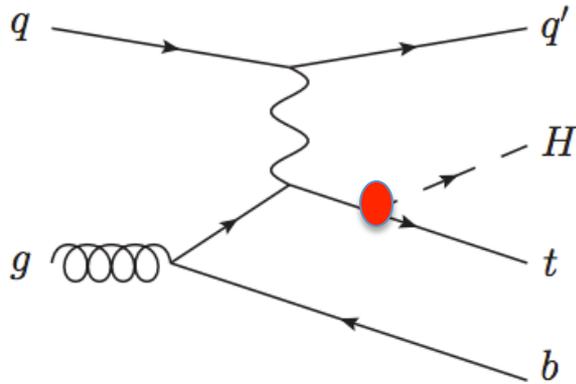

proportional to g_{WWH}

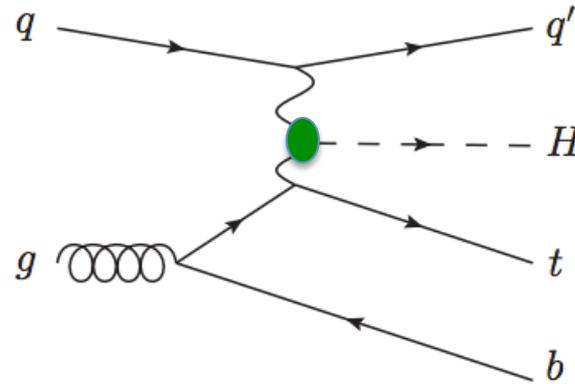

Direct Measurement of Y_t

- Associated Higgs Production with Single Top Quark

tHqb

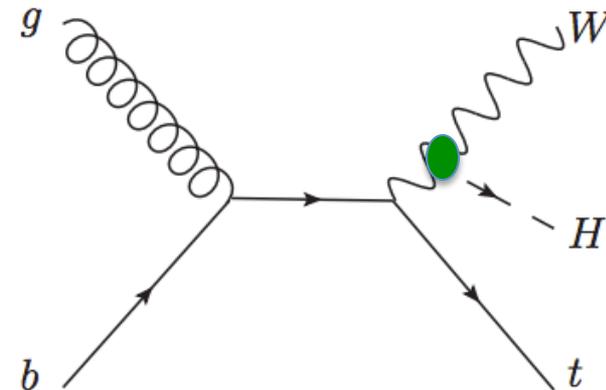

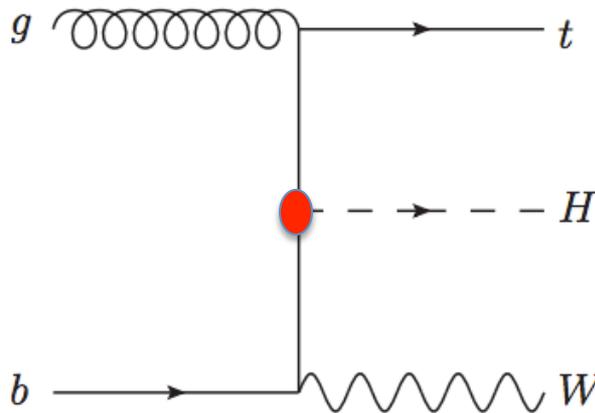

proportional to Y_t

proportional to g_{WWH}

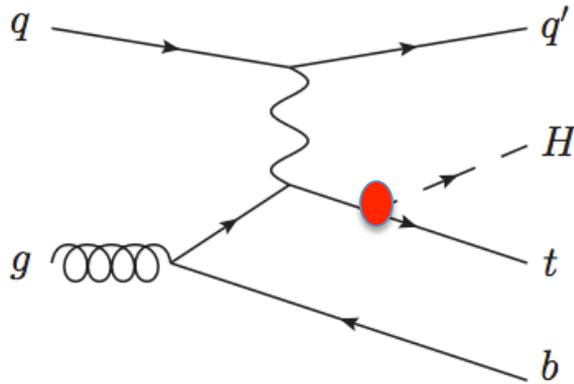

WtH

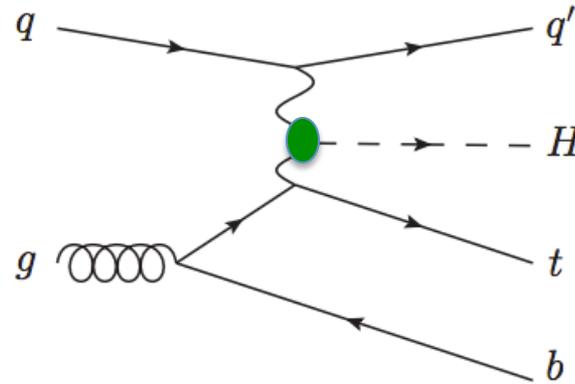

Direct Measurement of Y_t

- Associated Higgs Production with Single Top Quark

tHqb

proportional to Y_t

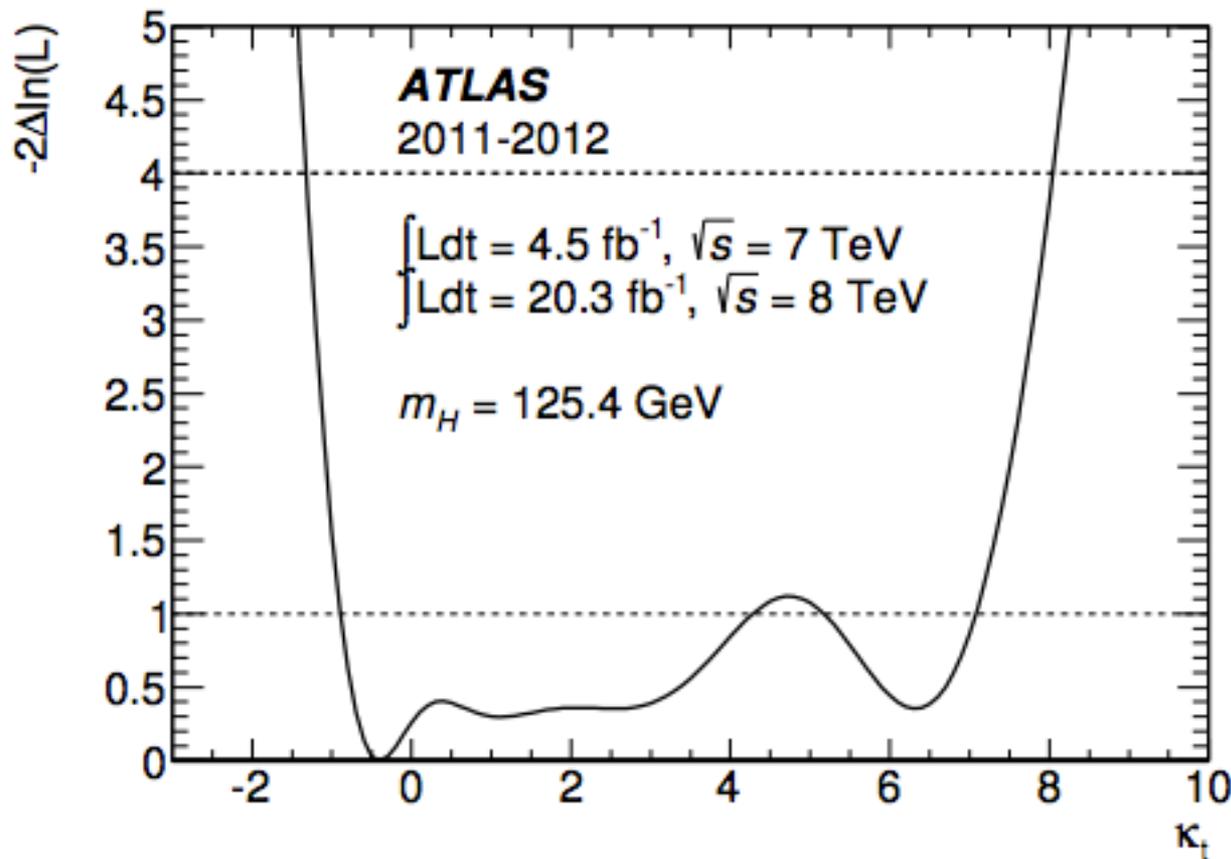

proportional to g_{WWH}

In the Standard Model, Y_t and g_{WWH} are of the same sign, and the two Feynman diagrams destructively interfere with each other.

ATLAS tH (H $\rightarrow\gamma\gamma$) Run 1 Results^[2]

19

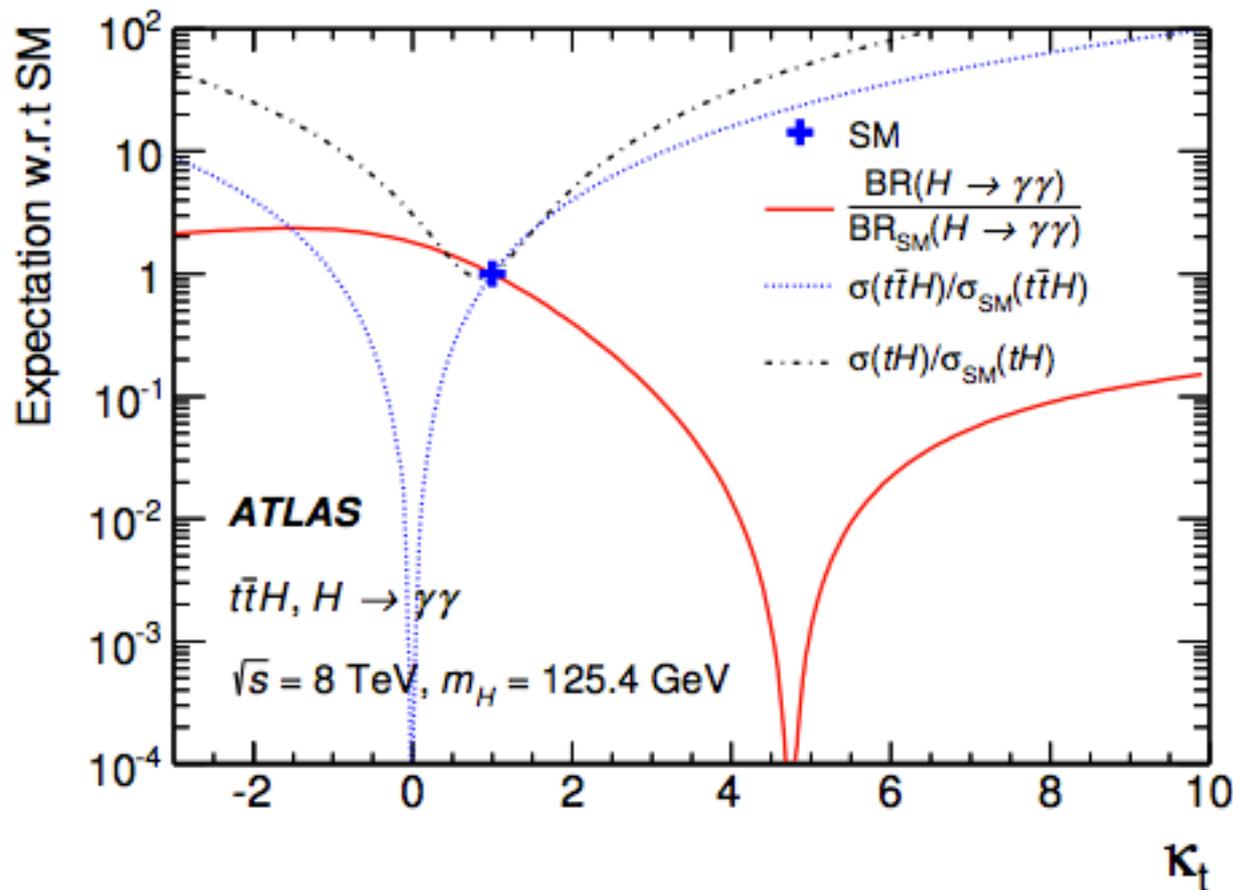

Negative log-likelihood scan of K_t at $m_H = 125.4$ GeV.

Scale Factor: $K_t = \frac{Y_t}{Y_t^{SM}}$

ATLAS $t\bar{t}H$ ($H \rightarrow \gamma\gamma$) Run 1 Results^[2]

20

Production cross sections for $t\bar{t}H$ and tH divided by their SM expectations as a function of κ_t .

Production Cross Section (pb^{-1})

	8 TeV	13 TeV	14 TeV
ttH	0.13	0.5027	0.611
tHqb Kt=1	0.018	0.0692	
tHqb Kt=0	0.059		
tHqb Kt=-1	0.197		
tHq Kt=1			0.0882
tHq Kt=0			276
tHq Kt=-1			0.98
WtH Kt=1	0.0047		0.016
WtH Kt=0	0.0073		0.0349
WtH Kt=-1	0.027		0.139
ggF	19.3		49.9
VBF	1.58		4.2
WH	0.705		1.5
ZH	0.415		0.88

Update on studies on the search for tH-production at a center-of-mass energy of 13 TeV.pdf

Sensitivity Projection in Run II

$S/\sqrt{S+B}$ vs Integrated Lumi for $t\bar{t}H(\gamma\gamma)$ at 13 TeV

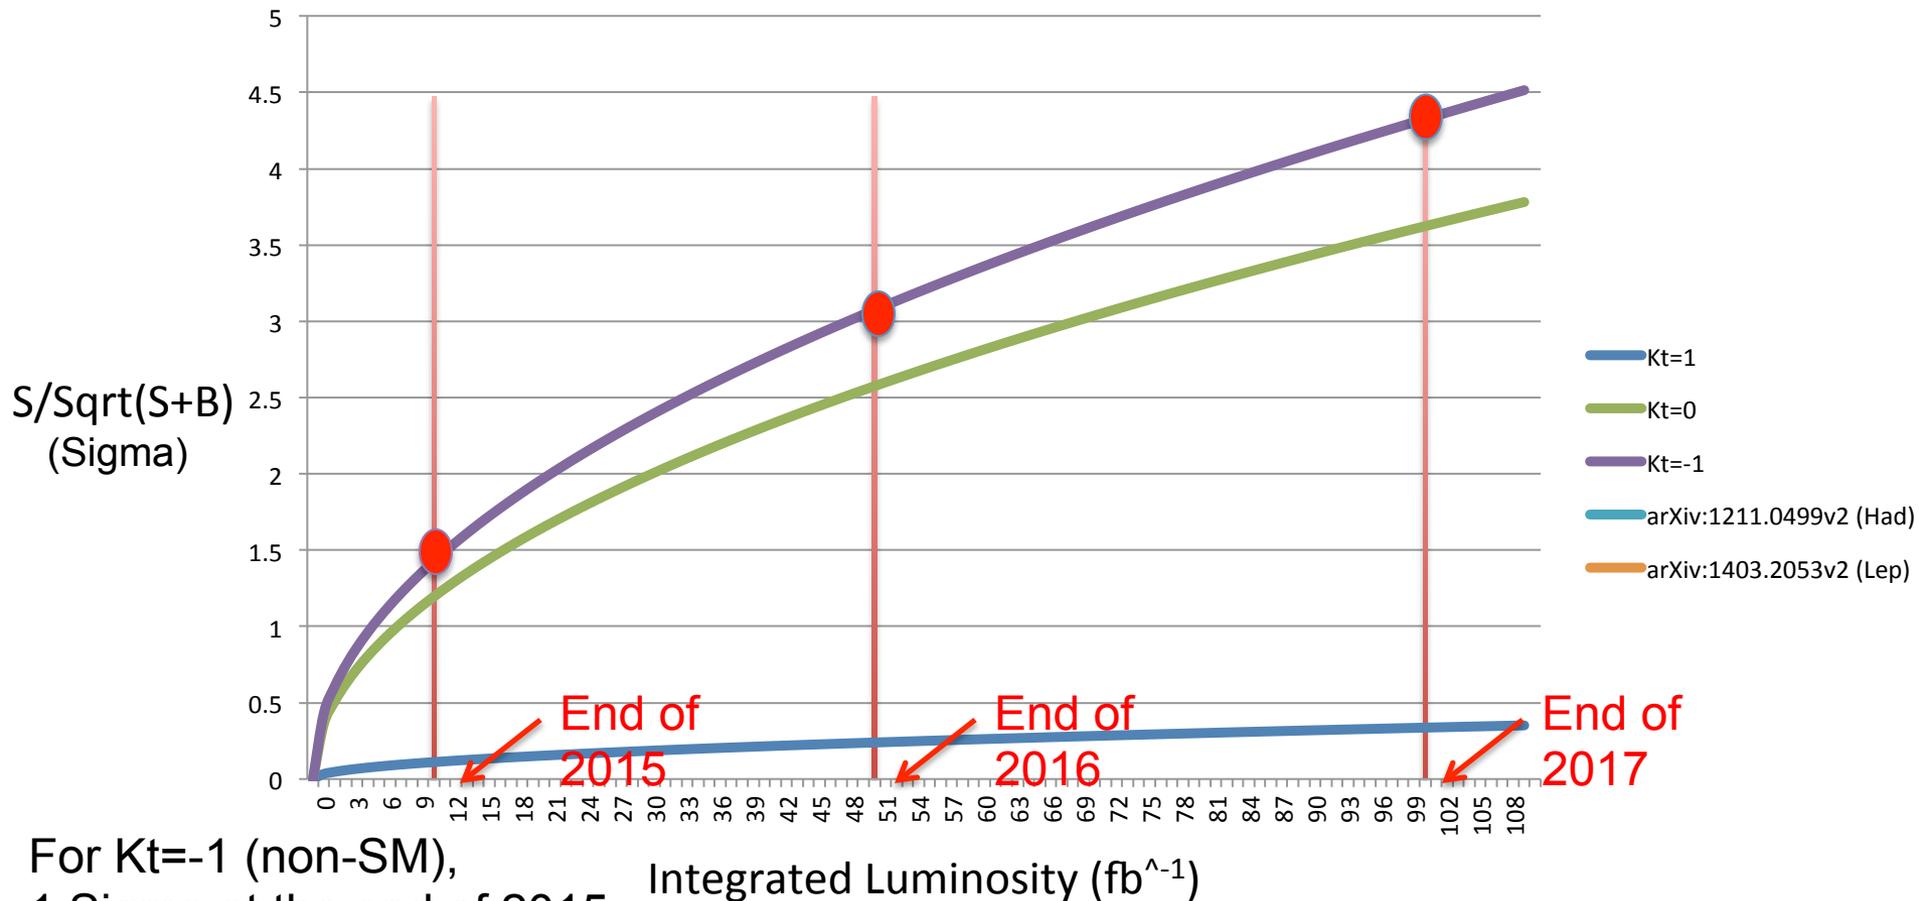

For $K_t=1$ (SM),

- 1 Sigma at the end of 2015
- 2 Sigma at the end of 2016
- 3 Sigma at the end of 2017

Sensitivity Projection in Run II

$S/\sqrt{S+B}$ vs Integrated Lumi for $tH(\gamma\gamma)q$ at 14 TeV

Hadronic: $\text{Br}(H \rightarrow \gamma\gamma) = 0.0023, 0.0037$ and 0.0054 for $K_t = 1, 0, -1$; Parton Level Simulation
Leptonic: $\text{Br}(H \rightarrow \gamma\gamma) = 0.0023$ for $K_t = 1, 0, -1$; Full Simulation

For $K_t=-1$ (non-SM),

1 Sigma at the end of 2015

2 Sigma at the end of 2016

3 Sigma at the end of 2017

HGamma Overlap Removal Handler ²⁴

- The HSG1($H \rightarrow \gamma\gamma$) group develops the HGamma Analysis Framework package for Run II analysis.
- The Framework contains many different handler classes and helper functions.
- For example, users can get all good photons by simply calling the Photon Handler. The Photon Handler will calibrate and select photons behind the scene.
- Similarly, the Overlap Removal Handler I am developing will provide users with a method to removal all object overlaps in accordance with the HGamma overlap recommendation.

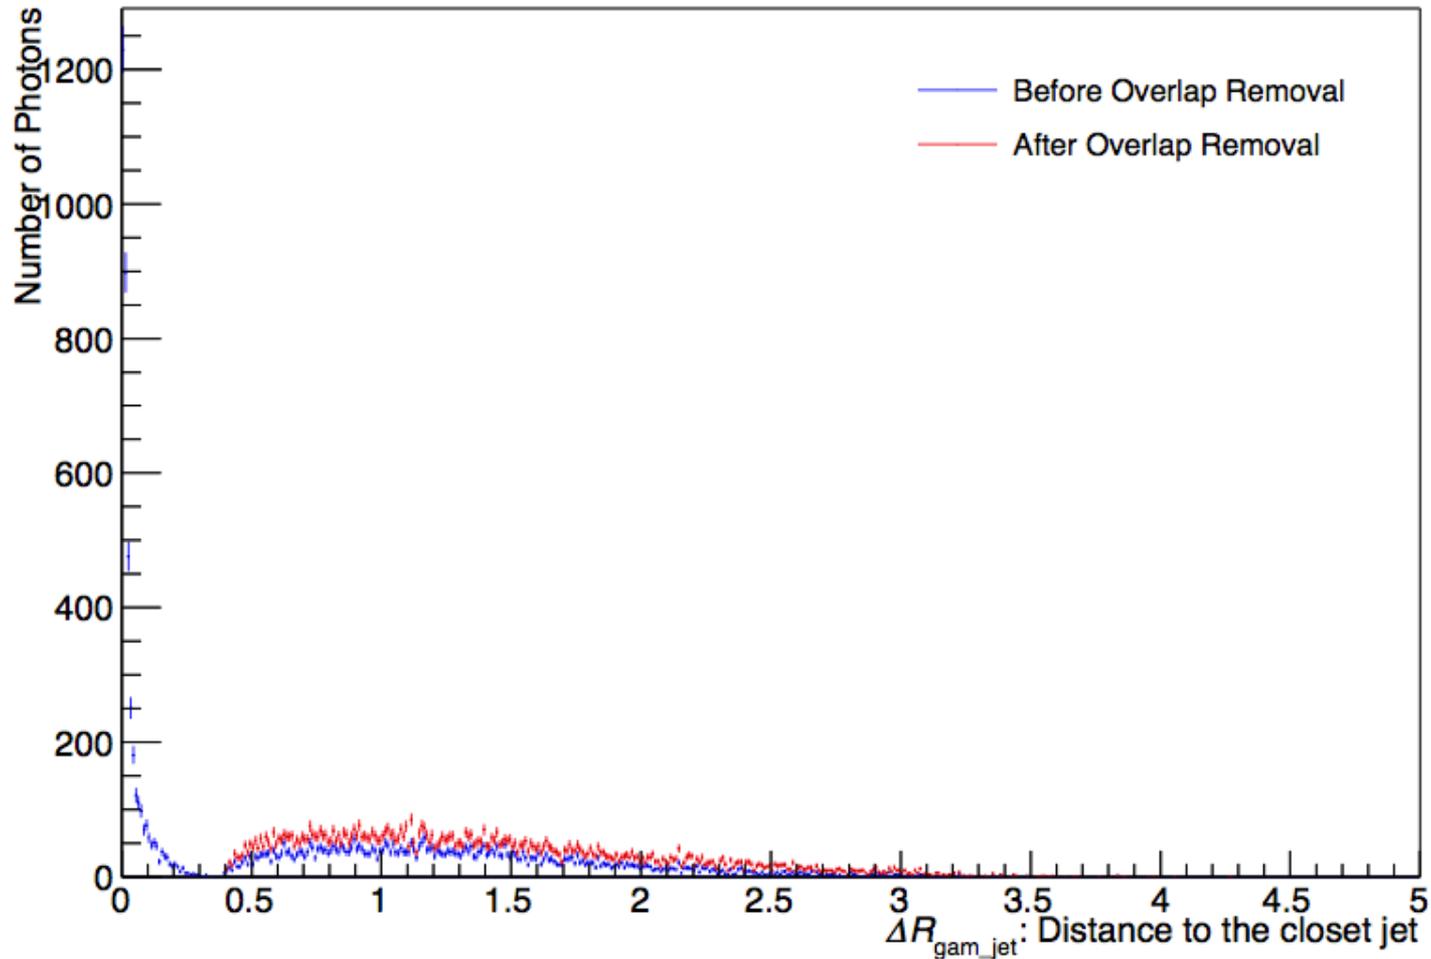

HGamma Overlap Removal Handler ²⁵

- The first version of the Overlap Removal Handler along with an example code is finished and has been uploaded to the HGamma Sandbox for testing.
- Next week, I will present the first version at the HGamma xAOD meeting and we will decide the detailed configurations of the handler.
- Afterwards, the Overlap Removal Handler will be migrated from the Hgamma Sandbox to the Hgamma Analysis Framework.
