Measuring Single Event Upsets in the ATLAS Inner Tracker

Thursday, 9 April 2015 16:25 (20 minutes)

When the HL-LHC starts collecting data, the electronics inside will be subject to massive amounts of radiation. As a result, single event upsets could pose a threat to the ATLAS readout chain. The ABC130, a prototype front-end ASIC for the ATLAS inner tracker, must be tested for its susceptibility to single event upsets.
