

ATLAS MasterClass 2018

Comments: We found a lot of potential Z events. There is a peak around 1000 GeV. There is another peak around 10 GeV (Upsilon).

UVIC ATLAS MasterClass 2017

Comments: Finding electrons? A line in the inner area (inner track) leaving a large energy in the green region (calorimeter).

Events that were cut? Low momentum. Photons creates Electron-Positron. Cosmic Ray. Very Complicated Events.
