DPHEP: Analysis "Redux"

- Important area, viewed both by (LHC) experiments and Funding Agencies – and DPHEP should be involved!

- Need to be clear about scope, resources, definitions and --- EXPECTATIONS & REQUESTS

- For example, is it an Analysis Preservation framework or an Analysis Capture framework? (With additional preservation services behind? (e.g. from PH-SFT and others))

- The examples that I have seen seem to have some "hard-coded" details, such as storage end-points and/or protocols and/or other details: BEWARE!
