

WP2: predictions and simulations of signal and background: theory part

Gudrun Heinrich

*Max Planck Institute for Physics,
Munich*

1st Annual **HiggsTools** Meeting

University of Freiburg, April 15-17, 2015

WP2 tasks

1. Improved predictions for Standard Model-like Higgs scenarios
2. Improved predictions for non-standard electroweak symmetry breaking scenarios
3. Backgrounds

WP2 tasks

1. Improved predictions for Standard Model-like Higgs scenarios
2. Improved predictions for non-standard electroweak symmetry breaking scenarios
3. Backgrounds

cutting edge calculations at the precision frontier

Tasks and Milestones

Task 2.1:

Improved predictions for Standard Model-like Higgs scenarios

M2.1.1 Specialised codes for the SM-like Higgs boson scenario

M2.1.2 Better control of theoretical uncertainties for the SM-like Higgs boson scenario

Task 2.2:

Improved predictions for non-standard electroweak symmetry breaking scenarios

M2.2.1 Precision calculations for vector boson scattering

M2.2.2 Precision calculations of non-standard Higgs boson scenarios

M2.2.3 Standardised description for non-standard Higgs boson interactions

M2.2.4 Interpretation of experimental data in the light of M2.2.3

Tasks and Milestones

Task 2.3: Backgrounds

- M2.3.1 Validation of key Higgs background processes and evaluation of uncertainties derived from extrapolating them to signal regions
- M2.3.2 Better control of theoretical uncertainties
- M2.3.3 Specialised codes for low multiplicity background processes

Higgs: status today

- $\sigma \times \text{BR}$ measured to 20-30%
- couplings (to vector bosons, fermions) measured to 15-20%

$$\mu = \sigma / \sigma_{SM}$$

ATLAS-CONF-2015-007

theorists wanted

scenario 1:

use current systematic uncertainties

scenario 2:

assume theory systematics improve by 50%, scale exp. systematics by luminosity

CMS Projection

Si Xie, Moriond 2015

tasks for LHC Run II (and beyond)

- Higgs properties: reduce uncertainties/establish:
 - Higgs couplings to b quarks
 - Higgs couplings to 2nd generation
 - Higgs to Z gamma
 - Higgs to invisible
 - anomalous couplings
 - Higgs self coupling and potential

tasks for LHC Run II (and beyond)

- Higgs properties: reduce uncertainties/establish:
 - Higgs couplings to b quarks
 - Higgs couplings to 2nd generation
 - Higgs to Z gamma
 - Higgs to invisible
 - anomalous couplings
 - Higgs self coupling and potential

viable BSM models typically induce modifications in
(some of) these of order $\sim 1\%$ - 10%

 **need precision calculations!**

tasks for LHC Run II (and beyond)

- Higgs properties: reduce uncertainties/establish:
 - Higgs couplings to b quarks
 - Higgs couplings to 2nd generation
 - Higgs to Z gamma
 - Higgs to invisible
 - anomalous couplings
 - Higgs self coupling and potential

viable BSM models typically induce modifications in
(some of) these of order $\sim 1\%$ - 10%

 **need precision calculations!**

- find new particles/resonances

Status: precision frontier

impressive achievements !

Status: precision frontier

impressive achievements !

- $W\gamma$ and $Z\gamma$ production at the LHC in NNLO QCD

M. Grazzini, S. Kallweit, D. Rathlev arXiv:1504.01330

- Two-loop helicity amplitudes for $q\bar{q}'$, $gg \rightarrow V_1 V_2 \rightarrow 4$ leptons

T. Gehrmann, A. von Manteuffel, L. Tancredi arXiv:1503.04812

arXiv:1503.08835

- Precise QCD predictions for the production of Higgs+jet final states

X. Chen, T. Gehrmann, E.W.N. Glover, M. Jaquier arXiv:1408.5325

- $W+W^-$ production at hadron colliders in NNLO QCD

T. Gehrmann, M. Grazzini, S. Kallweit, P. Maierhöfer, A. von Manteuffel,

S. Pozzorini, D. Rathlev, L. Tancredi arXiv:1408.5243

getting a handle on Higgs properties

- Unitarity-controlled resonances after Higgs discovery

C. Englert, P. Harris, M. Spannowsky, M. Takeuchi arXiv:1503.07459

investigate constraints on/effects of resonances in the Higgs sector which could show up in vector boson scattering at high energies

- On-shell interference effects in Higgs final states

C. Englert, Ian Low, M. Spannowsky arXiv:1502.04678

in the search for additional (heavy) Higgs states, interference effects (h - H , H -continuum) need to be taken into account

- Off-shell effects in Higgs processes at a linear collider and implications for the LHC

S. Liebler, G. Moortgat-Pick, G. Weiglein arXiv:1502.07970

off-shell effects in $h \rightarrow VV^$ very important at high energies at a LC, as well a precise knowledge of Higgs mass; study of h - H interference effects in 2HDM*

BSM Higgs boson scenarios

- Excessive Higgs pair production with little MET from squarks and gluinos in the NMSSM

Ulrich Ellwanger, Ana M. Teixeira

arXiv:1412.6394

- Possible explanation of excess events in the search for jets, missing transverse momentum and a Z boson in pp collisions

Ulrich Ellwanger

arXiv:1504.02244

CNRS node

Looking ahead

selected topics of “work in progress”

BSM:

- Scan the parameter space of the Higgs sector of appealing BSM models which are consistent with present data
- Identify, for the various viable ranges of Higgs masses and decays **the most promising signal rates**
(= production cross sections times branching fraction) **for LHC Run II**
CNRS (NMSSM) / DESY (complex MSSM) / DFTTO (EFT) nodes

SM:

- push the precision frontier in fixed order calculations (NNLO and beyond)
- better description of multi-jet/multi-particle final states
- inclusion of heavy quark effects
- complement fixed order approach by resummation, EFT, ...

**UDUR/ALU-FR/DESY/DFTTO/ETH/FOM/
IFJ-PAN/NCSR-D/UGR nodes**

selected topics of work in progress

- study of $pp \rightarrow t\bar{t} b\bar{b}$ at NLO QCD including shower (main background to ttH)
 - massive b-quarks, particular emphasis on study of impact of $g \rightarrow b\bar{b}$ splitting
- single top production at NNLO
 - use 2-loop form factor approach, benefit from master integrals calculated by differential equations method
- QCD corrections to the two-Higgs doublet model (THDM)
 - start with $H^+ H^-$ production in VBF at NNLO QCD

FOM node

selected topics of work in progress

- double Higgs production with full top mass dependence at NLO

Higgs self couplings:

measurement of trilinear H coupling feasible at HL-LHC

dominant reaction $gg \rightarrow HH$

LO: loop induced \Rightarrow NLO: 2 loops

$m_t \rightarrow \infty$ limit poor beyond threshold at $\sqrt{s} = 2m_H$

\Rightarrow need full m_t dependence \Rightarrow need 2-loop box integrals with m_t, m_H

ALU-FR node

Outlook

“There is nothing new to be discovered in physics now.
All that remains is more and more precise measurement”

Outlook

“There is nothing new to be discovered in physics now.
All that remains is more and more precise measurement”

Lord Kelvin 1900

Outlook

Outlook

- with **H** being discovered, we probably see only the tip of the iceberg
- precision calculations/simulations are a way to uncover what is underneath with current/future data
- the HiggsTools network will contribute to a better understanding of electroweak symmetry breaking
