KL commissioning

- No updates with respect to past CMs

- Need to collect statistics on all slabs, check all PMTs are alive, check beam profile, check equalisation

- If statistics is not enough need a local trigger (TOF2) possibly also for cosmics

- Currently issues with recent MAUS version in decoding – hope to be able to check things soon

- Need to revisit the shifter documentation (no significative change expected but need to be here to properly revise it – July 13-19)
