Scopus & SciVal have experience with responsible use of metrics for research assessment

Michigan Corporate Relations Network

ReachNC

Rankings:

Research metrics: our approach

We must offer:

- A basket of metrics
- For all peers
- Generated in an automated and scalable way

When implementing / using metrics:

- Always use judgment with metrics
- There is no perfect or leading metric; always use at least 2
- Selection differs depending on the question
- Take variables into account
- We can't prevent stupidity or irresponsibility

Best practice

- Research community who judge and are judged should ideally define metrics
- No methodological black boxes – no exceptions
- Independent of business and access models
- No aggregate / composite metrics

Response to HEFCE's call for evidence: independent review of the role of metrics in research assessment

30 June 2014

Yes, Elsevier would be interested in participating in a workshop / event to discuss the use of metrics in research assessment and management.

This response covers the following sections:

- A. Why is Elsevier responding?
- B. For what purposes are research metrics used?
- C. Guiding principles for use of metrics in research assessment
- D. A model for generating and using metrics in research assessment
- E. Implications for using metrics in research assessment
- F. Response to the specific questions posed by HEFCE

Empowering Knowledge

Composite metrics should be avoided and all calculation methods must be freely available, not proprietary

Snowball Metrics approach to altmetrics

Vision: Snowball Metrics enable benchmarking by driving quality and efficiency across higher education's research and enterprise activities, regardless of system and supplier

Bottom-up initiative: *Universities define and endorse metrics to generate a strategic dashboard. The community is their guardian.*

There are 4 Snowball Metrics altmetrics buckets:

- **Scholarly Activity**  - Number of times that an output has been posted in online tools that are typically used by academic scholars e.g. Mendeley, Zotero
- **Scholarly Commentary**  - Number of times that an output has been commented on in online tools that are typically used by academic scholars e.g. research blogs, F1000 Prime
- **Mass Media**  - Number of times that an output has been referred to by e.g. newspapers, specialized publications
- **Social Activity**  - Number of times that an output has stimulated social media posts e.g. Facebook, Twitter

Abstract

View references (44)

We present a hierarchical genome-assembly process (HGAP) for high-quality de novo microbial genome assemblies using only a single, long-insert shotgun DNA library in conjunction with Single Molecule, Real-Time (SMRT) DNA sequencing. Our method uses the longest reads as seeds to recruit all other reads for construction of highly accurate preassembled reads through a directed acyclic graph-based consensus procedure, which we follow with assembly using off-the-shelf long-read assemblers. In contrast to hybrid approaches, HGAP does not require highly accurate raw reads for error correction. We demonstrate efficient genome assembly for several microorganisms using as few as three SMRT Cell zero-mode waveguide arrays of sequencing and for BACs using just one SMRT Cell. Long repeat regions can be successfully resolved with this workflow. We also describe a consensus algorithm that incorporates SMRT sequencing primary quality values to produce de novo genome sequence exceeding 99.999% accuracy. © 2013 Nature America, Inc. 定序間的釘孤枝！—淺談次世代基因定序技術

Pansci
26 May 2015

次世代基因定序技術已然發展10年，而為什麼叫做次世代（Next-Generation）呢？那第一代去哪裡了？我為何要關心次世代定序技術？乾我何事？要回答到你懂這些問題以前，你必須必備大一生物學；不難拉，大概有點概念就可以。再來要有基礎的統計學概念以及數理概念，一樣不難拉，高中程度就可以。可是你問我，我高中都在談戀愛怎辦？沒關係，就讓我娓娓道來。

New Cost-Effective Genome Assembly Process

Medical News Today
