

# Third Hyper-K EU Meeting

- Very interesting talks, progress and ideas!
- However, our goal is a successful submission to MEXT in 2017.
- But before then there is the Design Report to reviewers (Oct 2015). Requests will be made to contribute.
- There are still several items to be addressed:
  - More personnel needed
  - We can also exploit already existing expertise (eg see talk on photosensors)
- A collaborative effort will help with progress and funding requests in the different Countries.

# Some more concrete cases

- Photosensors:
  - Plenty of needs (personnel). Help can be provided by other collaborations, eg pressure studies.
- Electronics:
  - Several ideas, needs presented. Future mailing list for coordinated meetings.
- Software/Physics:
  - Needed personnel for several topics
- ND (ND280 & Intermediate detectors):
  - Needed sensitivity studies. Coordinated within the ND/Physics Wgs.
- CERN Prototypes:
  - Mailing list will be created soon to include all the interested people and converge towards a proposal

A very well attended meeting by Hyper-K and non Collaborators. Plenty of discussions, however...

...a large amount of work to do. Let's work together for the DS and MEXT submissions to make a reality the greatest CPV and proton decay experiment!
