Single inclusive particle production at NLO: improved CGC treatment.

Monday 7 September 2015 15:50 (25 minutes)

We discuss the recent improvement of the NLO calculation of single inclusive particle production in pA collisions within the CGC formalism. The two points that have not been addressed previously, and are treated consistently in the current approach are the Ioffe time cutoff on the configurations that can participate in the scattering, and the careful treatment of the evolution interval.
