

International Conference on Accelerator Optimization

CNA, Seville, Spain: 7th - 9th October 2015

Accelerators are key instruments for fundamental research, health and industry applications. International collaboration is very important for their continued optimisation. The oPAC consortium carries out collaborative research to optimize the performance of present and future accelerators and light sources.

This International Conference will promote the research outcomes from oPAC and feature talks about the network's work packages by fellows and research leaders from across the world. It will also present the opportunity for contributed talks and to discuss follow-on activities between the oPAC partners and participating scientists from outside the network.

The proceedings will be published in a special edition of Physical Review STAB.

The registration fee of **600 €** includes accommodation with breakfast (3 nights, from Tuesday to Friday), conference documentation, lunch during the conference, a cocktail reception, the conference tour and formal dinner on Thursday, as well as daily transport from the hotel to CNA. For participants not requiring accommodation the fee is **150 €**.

Places are strictly limited and early registration is strongly recommended.

Deadlines:

31st July 2015 – Abstract submission

7th September 2015 – Registration & payment
