IDT: RapidIO Interconnect based Low Latency Multi Processor Heterogeneous Solutions

Wednesday, 10 June 2015 12:25 (15 minutes)

In this presentation IDT will present some background on the RapidIO technology including 100% wireless macro base station global deployments and the applicability of this embedded interconnect to CERN's particle physics challenges. The presentation will cover attributes of the RapidIO interconnect for latency, scalable and energy efficiency and will touch on RapidIO based solutions for the HPC market including what is being done in the Open Compute Project.

Presenter: PAUL, Devashish (Director of Strategic Marketing, Systems Solutions, IDT)
