European Bioinformatics Institute: Research Infrastructure needed for Life Science

Wednesday, 10 June 2015 10:10 (15 minutes)

The life science community is an ever increasing source of data from increasing diverse range of instruments and sources. EMBL-EBI has a remit to store and exploit this data, collected and made available openly across the world, for the benefit of the whole research community. The research infrastructure needed to support the big data analysis around this mission encompasses high performance networks, high-throughput computing, and a range of cloud and storage solutions - and will be described in the presentation.

Presenter: Dr NEWHOUSE, Steven
