WLCG Network and Transfer Metrics WG After One Year

Tuesday 13 October 2015 16:10 (20 minutes)

It has been approximately one year since the WLCG Network and Transfer Metrics working group was initiated and we would like provide a summary what has been achieved during this first year and discuss future activities planned for the group.

The working group as chartered had a number of objectives:

- Identify and make continuously available relevant network and transfer metrics
- Document those metrics and their use
- Facilitate their integration in the middleware and/or experimental tool chains
- Coordinate commissioning and maintenance of WLCG network monitoring

We will report on the status of these objectives and summarize the work that has been done in a number of areas, concluding with our vision for where the working group is likely to go in the future.

Length of presentation (max. 20 minutes)

20
