

# GridICE: overview and current status

*Guido Cuscela*  
*INFN – Bari*

*Service Challenge Technical Meeting*  
*September 15 , 2006*

- **Old and new features (new release)**
- **What we are monitoring**
- **Job monitoring results (INFN-T1)**
- **Use cases (web interface)**
- **Issues**

## – Grid monitoring

- Grid resources and services are subject to failures and is fundamental their monitoring for the Grid utilization

## – Local monitoring

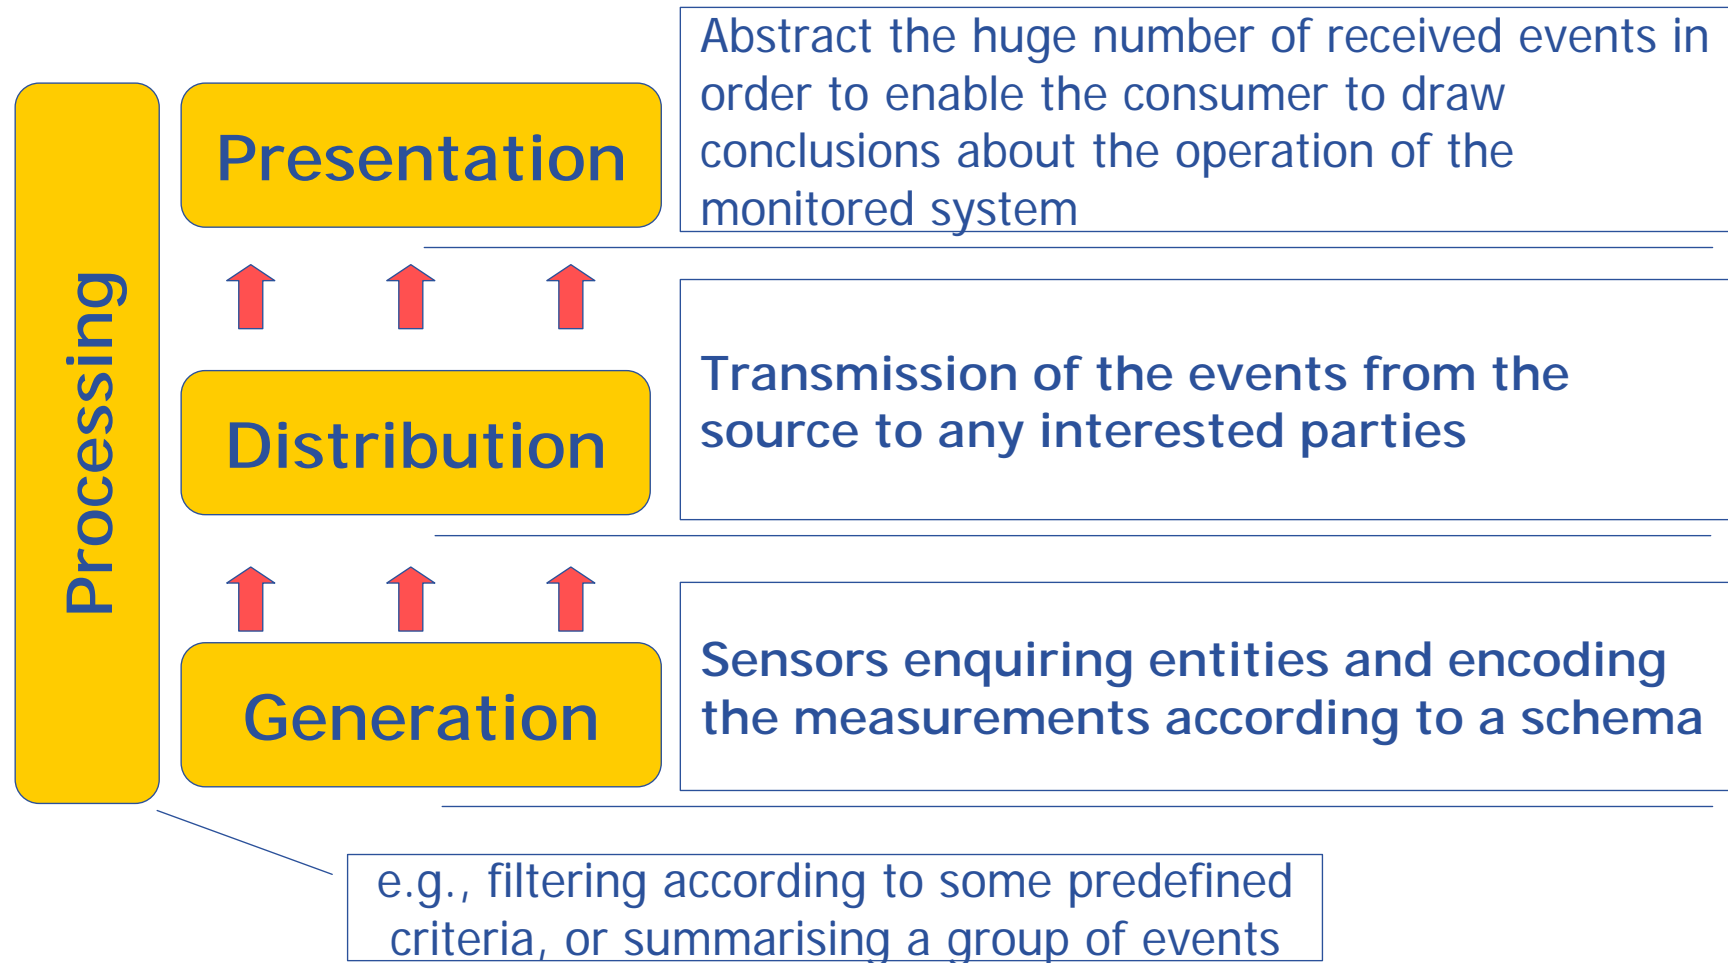

- GridICE can be used to monitor your own farm (in connection with a local server)

- **Version: v1.9.0-0 was released on Fri, 08 Sep 2006**
  - The Grid.it server ([gridce4@cnaf](mailto:gridce4@cnaf)) has been already updated
- **Installed servers are monitoring Grid resources in the scope of:**

EGEE	EGEE-SWE	RDIG	EGEE-SEE	Grid.it
GILDA	CMS	EUMedGrid		EUChinaGRID
	ATLAS	EELA		BeGrid
	BalticGrid			

- **The EGEE server ([gridice2@cnaf](mailto:gridice2@cnaf)) runs since July 2005**
- **The Grid.it server ([gridce4@cnaf](mailto:gridce4@cnaf)) runs since July 2005 without any major intervention and continue to perform very well**

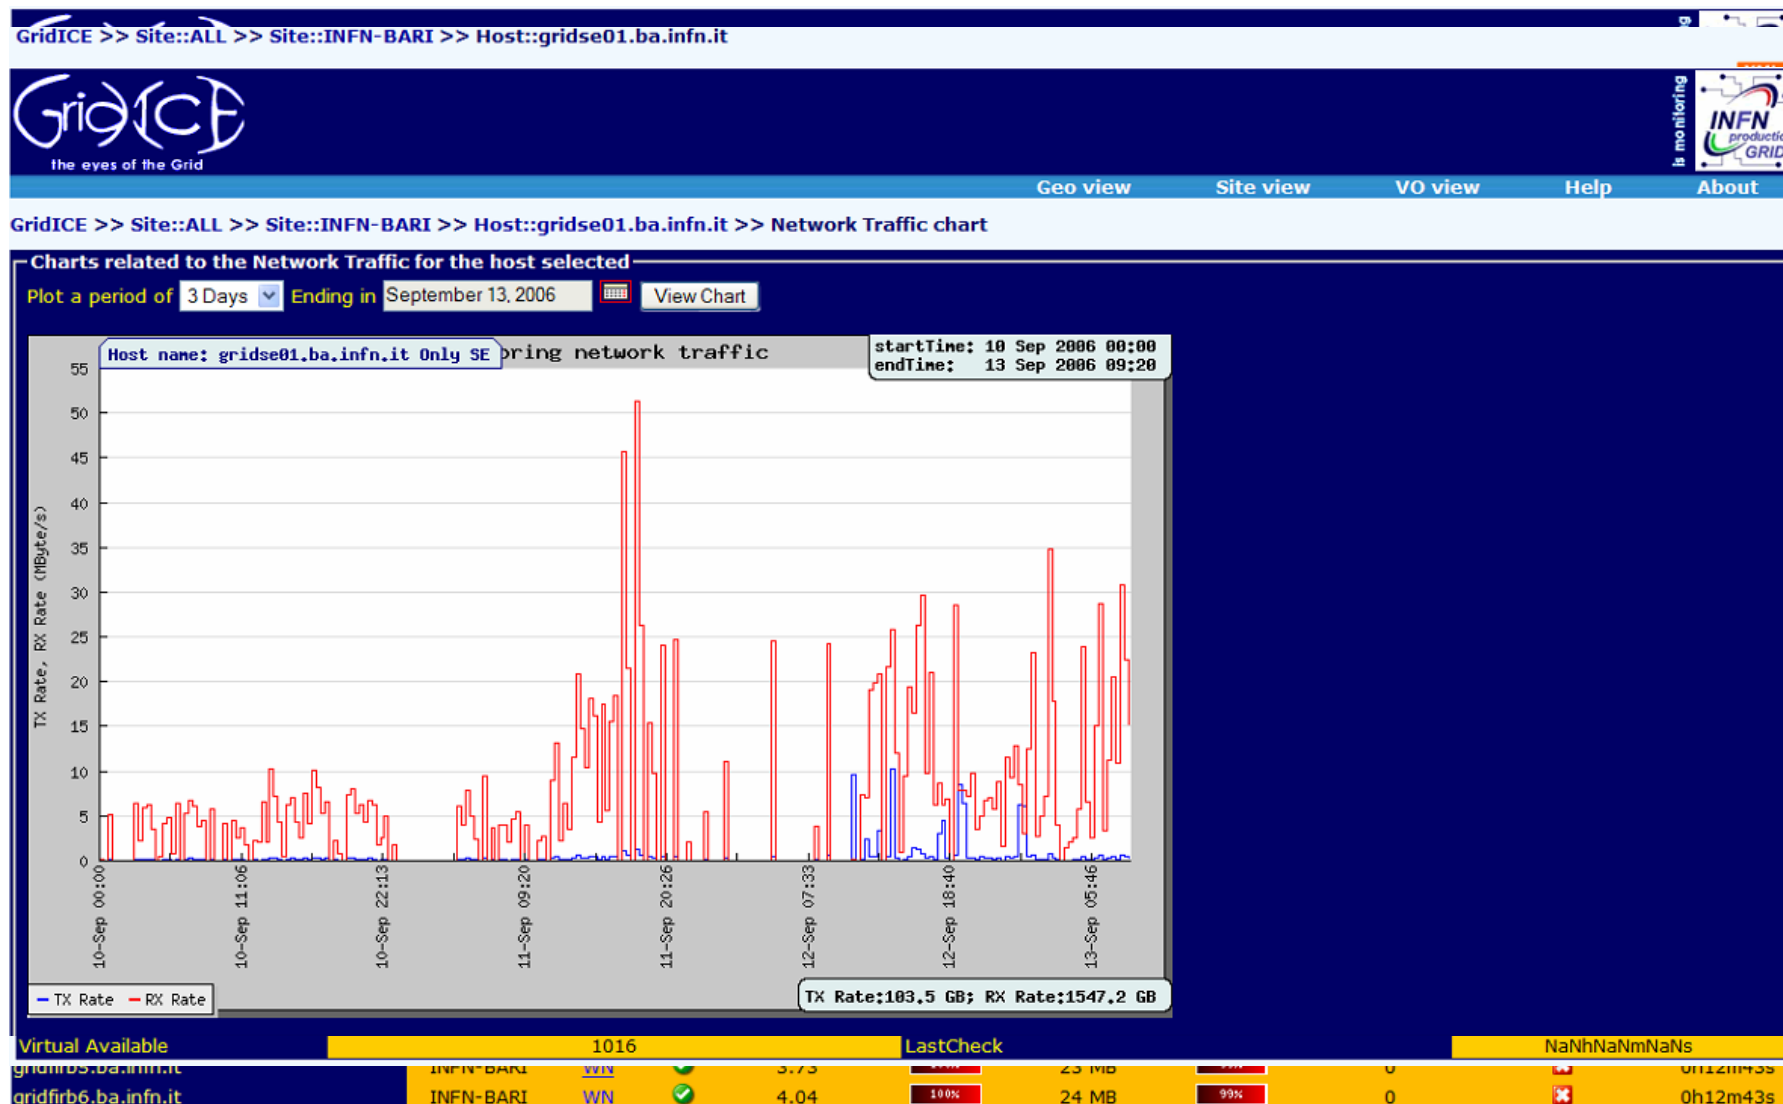

# How does it work

- **powerful and complete web-based interface for data presentation**
- **each view of the web-based interface offers the same data in XML format**
- **support for customized graph generation**
- **notification service**
  - Customizable monitoring of nodes
- **automatic discovery of new resources to be monitored through the Grid Information Service**
- **complete set of monitored metrics, from host-related to Grid service related characteristics**
  - supports and extends the GLUE Schema
- **support for the following batch systems: OpenPBS, Torque, LSF**
- **integrated with network-related infrastructure for monitoring the connectivity of a Grid**

# What we are monitoring

- **Hardware monitoring:**
  - fabric level monitoring via LEMON sensors
- **Services monitoring:**
  - For every grid node we check the related services (via standard GRIIS)
  - Monitoring of every process/daemon which has to run on nodes
- **Job monitoring:**
  - New “lightweight” job monitoring sensors (we are running at INFN-T1 with no problems and with more than 3000 jobs R/Q)
  - Execution time reduced of the order of a factor ten compared with the previous version
  - About 99% of jobs retrieved correctly
- **LRMS monitoring (since GridICE 1.9.0 release):**
  - LRMSinfo sensor as preliminary SLA support and basic site CPU usage efficiency
  - No sensors on WNs (all needed information retrieved on the CE from batch system)

## Comparison between BOSS and GridICE jobs data (CMS production aggregate data from INFN-T1,INFN-Legnaro,INFN-Bari,INFN-Pisa)

<b>Total number of jobs</b>	<b>5939 (3175 at INFN-T1)</b>
<b>Number of jobs not seen by GridICE</b>	<b>97 (55 at INFN-T1)</b>

***98.3% accuracy***

- **Region/ROC support**
  - filter the resource by region
  - modify site/region binding
- **Synchronization with GOCDB**
  - Detailed info on site downtimes (foreseen, partial or global)
- **LRMSInfo**
  - a bunch of new charts available to have a view of resources utilization
- **More options to retrieve jobs information (search by global-ID, local user ...)**
- **New statistic plots with new look & feel (ex: Grid Jobs vs. Local Jobs)**
- **Chart Section Reorganized**
  - new menu to select single charts or per user role view
- **Clean Up DB History**
  - available a new script that help in deleting historical data from the DB (you should need to delete data older then a specific date/time)

We focus on the following categories of users:

- **VO manager**

- *actual set of resources accessible to VO members*
- *“How many jobs submitted by my users are running or queued?”*

- **Grid operator**

- *all resources under responsibility of a Grid Operator Center*
- *“How many resources are available?”*

- **Site administrator**

- *site resources offered to a Grid*
- *“Is there any service down?”*

- **Queries lateness [end of the year]**
  - We are working on database improvements (table partitioning, db schema modification ...)
- **LeMON 2.10.x [end of the year]**
  - We have planned to migrate to latest LeMON version as soon as possible
- **gLite 3.0 [end of October]**
  - Integration of job monitoring sensors is finished (we are testing them with italian ROC release team)
- **Storage probes [end of October]**
  - Grid transfer monitoring (DPM, CASTOR, dCache)
  - local transfer and access to file (RFIO,dcap; both authenticated and un-authenticated versions )
  - Not yet ready for production. Need some more development and tests
- **Advanced RB probe**
  - Code is ready for gLite. We need some more time to integrate the info on the GridICE collecting infrastructure
- **FTS monitoring**
  - Used at CNAF
  - Will be integrated in GridICE
- **Group and VOMS roles monitoring**
  - Will be available in new releases

- **We are able to provide a wide and easy to use Grid monitoring**
  - Fabric level
  - Services monitoring
  - Job monitoring
  - Storage and FTS monitoring (shortly)
- **We keep on working to improve:**
  - Performances
  - Reliability
  - Design
- **We are open to collect new requirements and support your monitoring needs**

GridICE dissemination: <http://gridice.forge.cnaf.infn.it>

GridICE >> VO:

**General**

VO Name ▼

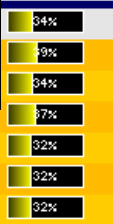

- alice
- alio
- atlas
- babar
- bio
- biomed
- cdf

## Use Case 3

## VO manager

### Detecting all Grid resources for the “alice” VO

Storage Load

	25	354	354	-	-	18.9 TB	29.8 TB
bio	24	305	305	275	256	16.4 TB	24.2 TB
biomed	18	262	262	5	1	17 TB	24.8 TB
cdf	25	262	262	-	-	16.4 TB	24.1 TB
