Point by point extraction of the transversity distribution

Thursday, 3 September 2015 12:00 (15 minutes)

The transversity distributions have been recently extracted in a point to point analysis using the Collins and di-hadron asymmetries for p and d, and the corresponding e+e- asymmetries. This alternative method to access transversity (and the other TMD PDFs) has some advantages which are proposed for discussion.

Session

4: TMDs from azimuthal asymmetries in polarized SIDIS with transverse and longitudinal spin

Primary authors: MARTIN, Anna (Trieste University and INFN (IT)); BRADAMANTE, Franco (INFN Trieste (IT)); BARONE, Vincenzo (University of Piemonte Orientale)

Presenter: MARTIN, Anna (Trieste University and INFN (IT))

Session Classification: TMDs from azimuthal asymmetries in transversely and longitudinally polarized SIDIS
