

The new CERN Gamma Irradiation Facility will start operation in about 1 week.

It is the result of the collaboration between EN, PH Departments and users (AIDA).

Relevant infrastructures should be ready (?).

Others (from users) will be completed soon.

GIF++ facility in the ENH1 experimental hall

The new 14 TBq ^{137}Cs irradiator

Irradiation and beam time are already fully booked for 2015

15 setups from different LHC experiments are ready to start R&D activities:

ageing tests or detector validation test in presence of high radiation background and beam.

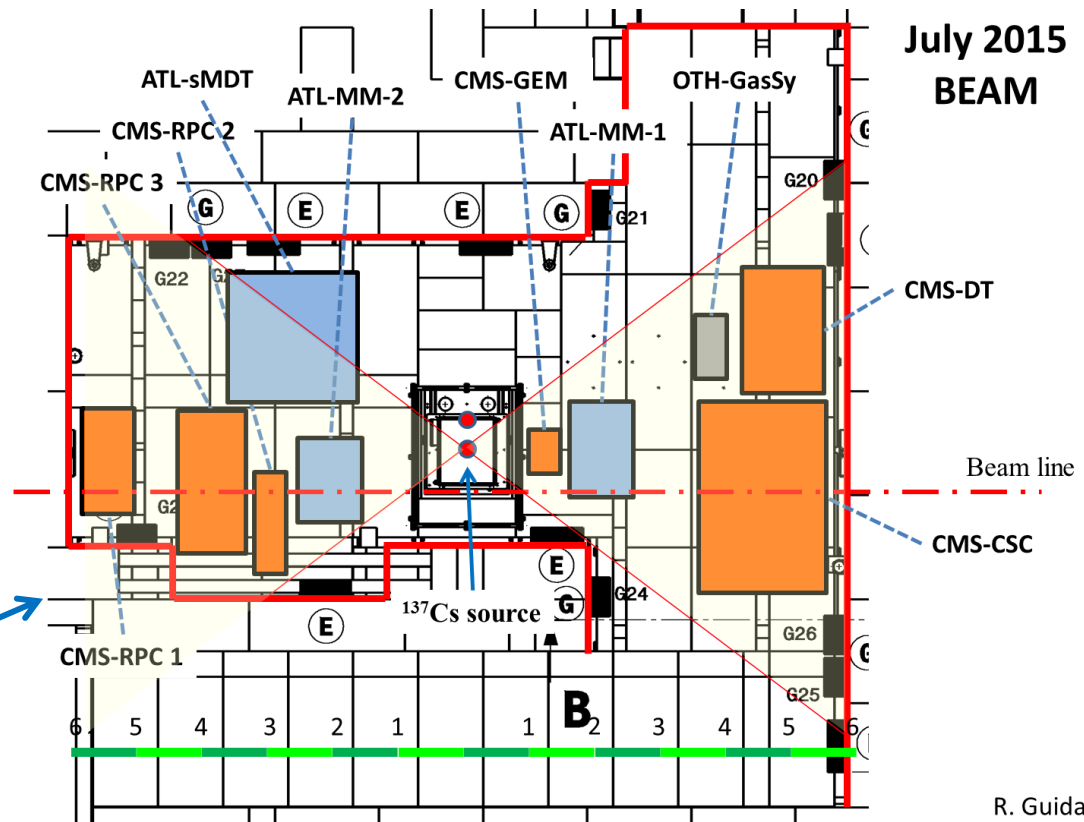

Starting from June/July the bunker is fully occupied.

Several setups from ATLAS and CMS experiments as well as R&D for gas systems and beam monitoring chambers.

Other users/experiments interested

Detailed schedule within GIF users being finalized.

GIF users in the bunker:
Example for one beam time period
