

PIC/WIC/FMCM

Commissioning status

16.04.2015

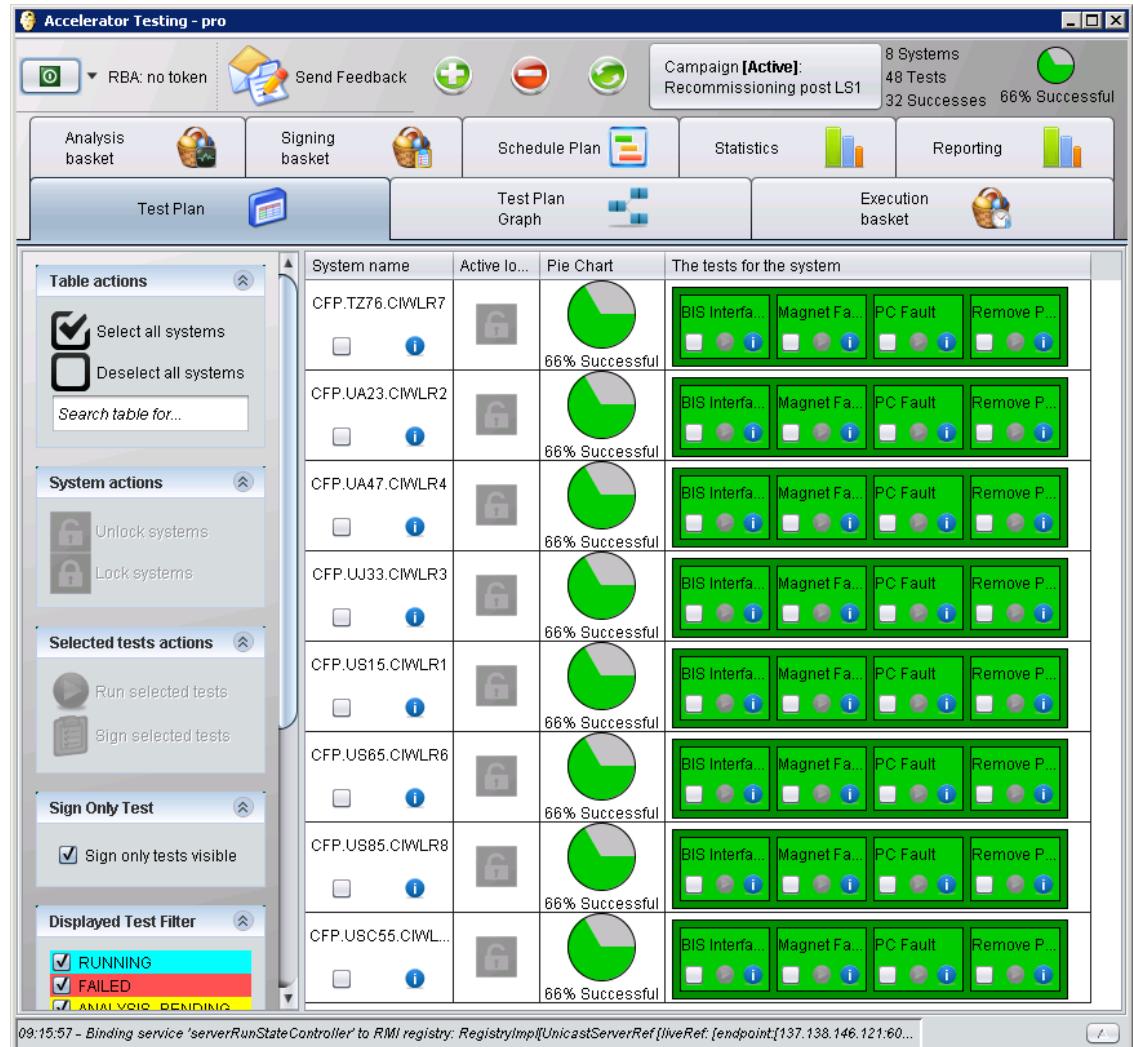

PIC status

- Commissioning completed:
 - BIS interface (CIBU tests)
 - BIS interface (Functional)
 - Circuit fault propagation to BIS
 - Verification of PIC configuration, e.g. ROD/F as MASKABLE during RUN2
 - Propagation delay between PIC vs BIS (typically ~2ms)
 - Fully integrated in ACC_TESTING which allowed to test more than 800 sc circuits
 - Global interlocks (CRYO, UPS, AUG)
 - Access interlocks
- No other specific tests are required with beam

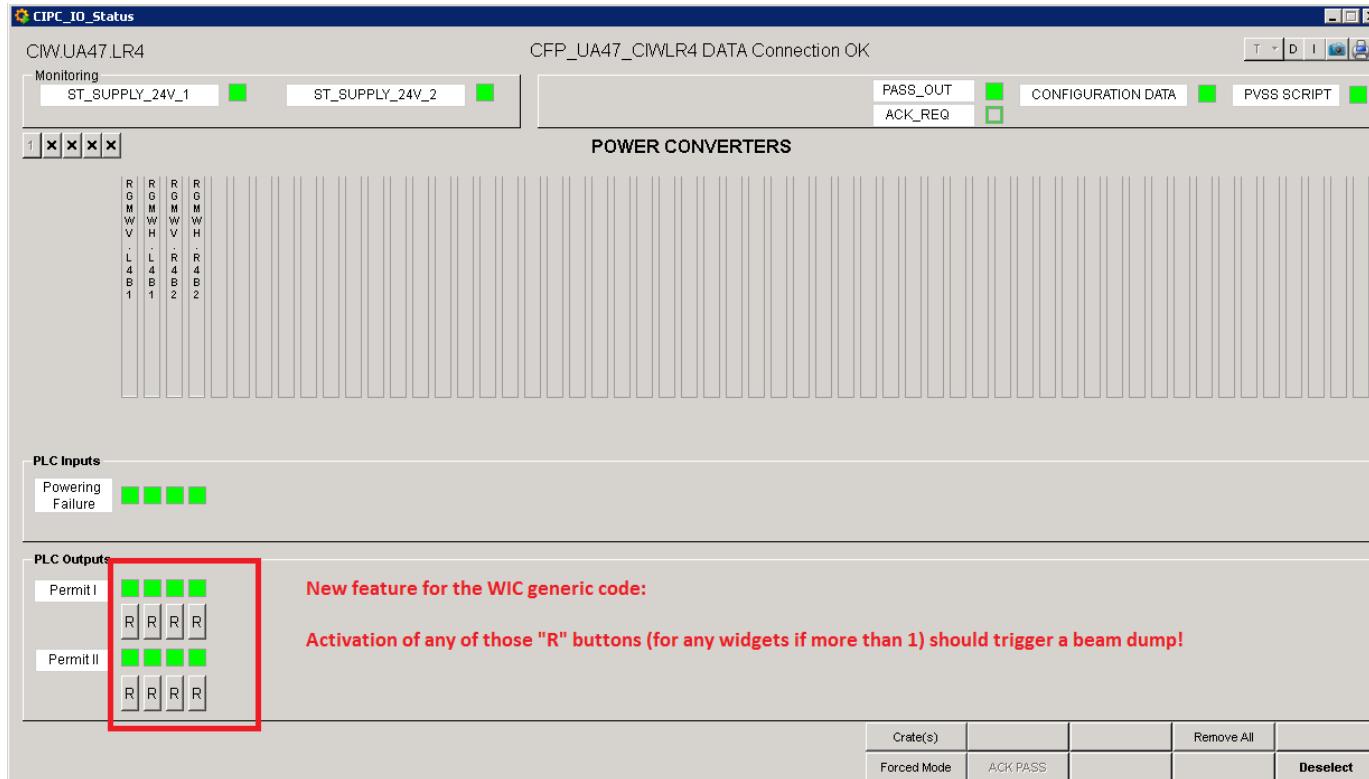

WIC status

- Commissioning completed:
 - BIS interface (NC:Missing ground connection on pins 1&2 of interfaces)
 - Magnet fault to BIS
 - PC fault to BIS
 - Remove Permit to BIS
- Diagnostics issue:
 - Time-stamping issue provoking up to 900ms delay wrt BIS (PLC firmware?)
- No other specific tests required with beam

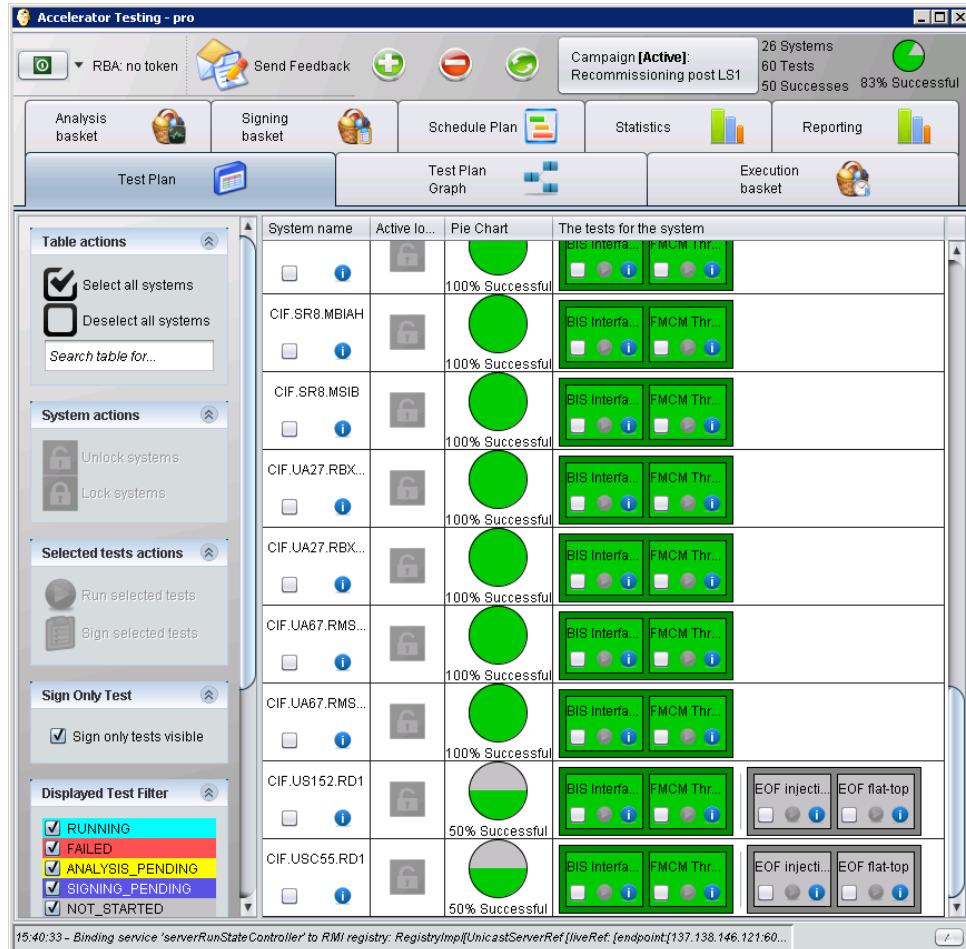

Remove Permit does not activate Beam Dump

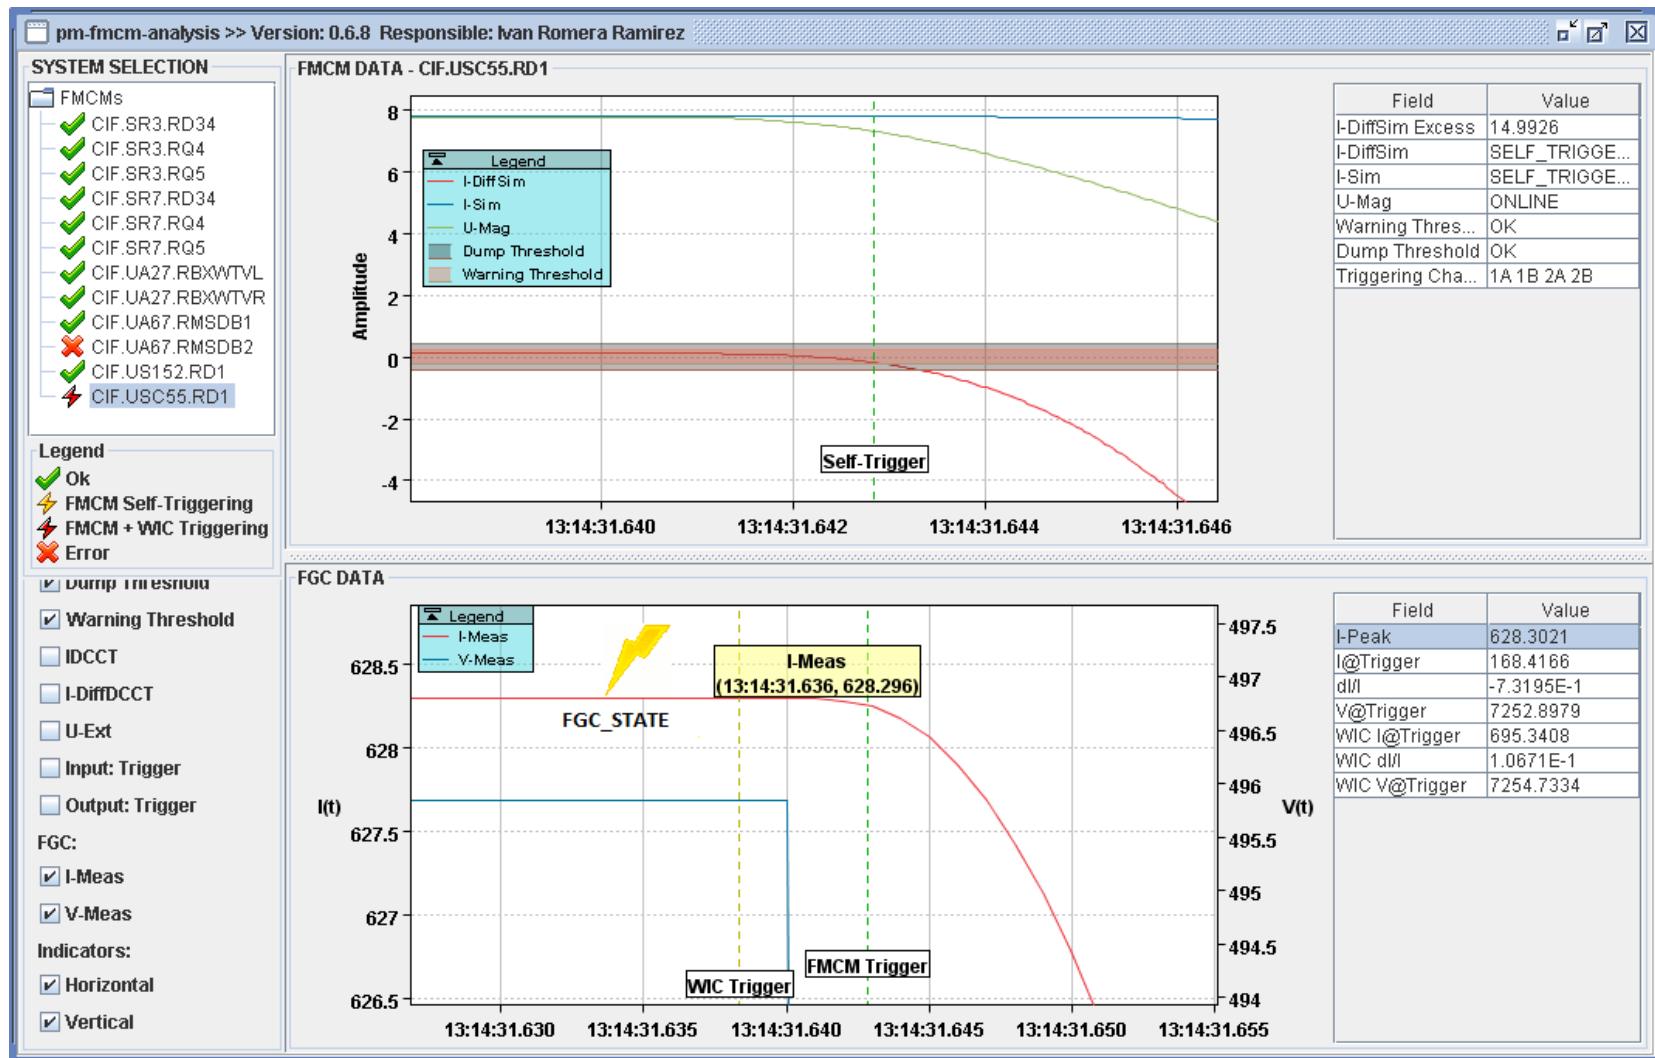

- New functionality in WinCC that allows to open the relay outputs used to generate "Fast Abort" commands to the power converters.
- By doing so, it will trip the associated power converter.
- In case there is beam circulating in the machine, this action will NOT send a beam dump request as this information is NOT going through the matrix at the level of the PLC.
- So, to avoid a possible human error, any human action on any of these relays, will trigger a beam dump request!

FMCM status

- 26 monitors installed in LHC & SPS TLs
- Test without beam completed:
 - BIS interface (CIBU tests)
 - Trigger and BIS (Validation of correct trigger and propagation to the BIS)
- Test with pilot beam (TO BE DONE)
 - Validation of correct trigger and propagation to BIS at 450Gev and 6.5TeV (EOF)
 - Verify beam excursion and beam losses observed before going to high energy beams
- **Remaining:** New version of FESA class ready to solve an issue on the PM layer after upgrading to Linux (MEN A20)

Trigger and BIS verification

- FMCNs thresholds have been set for 7TeV operation (for max ΔV scenario)
- Therefore sensitivity at 6.5TeV equivalent current is higher than at injection
