

In-medium nucleon axial form factor using a light-front nucleon wave function and a quark-meson coupling model

Monday 19 March 2018 16:00 (1 hour)

We study the nucleon axial (G_A) form factor in symmetric nuclear matter in a light-front approach using the in-medium inputs calculated by the quark-meson coupling model, where the quarks interact with a flavor independent contact force. We found results comparable to the ones obtained with a confining interaction.
