Anatomical Changes

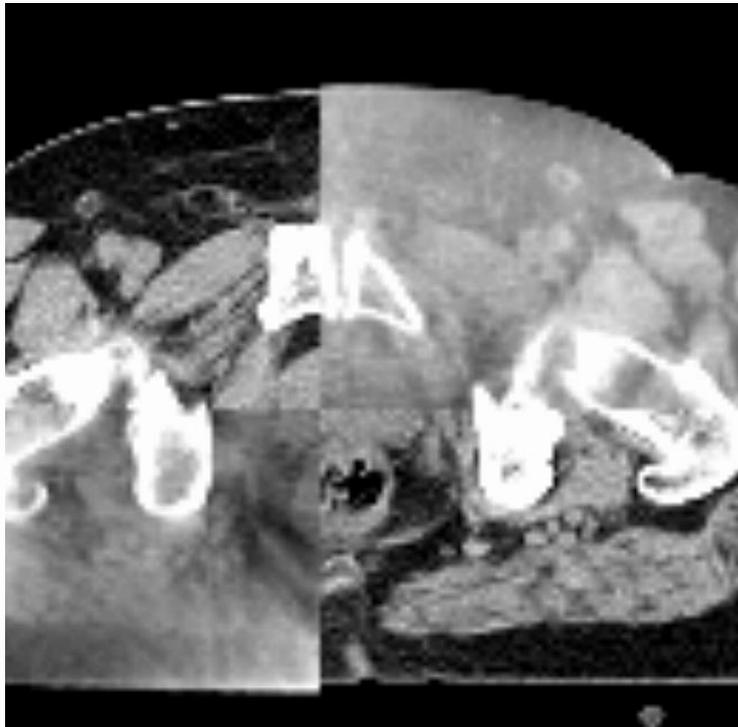

The Adaptive Replanning Process

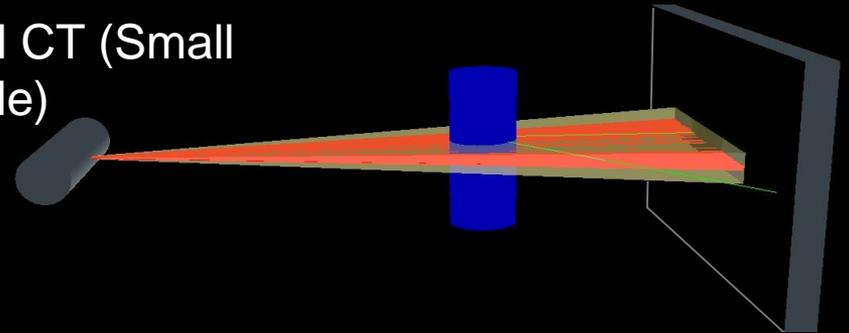

CBCT Image Quality

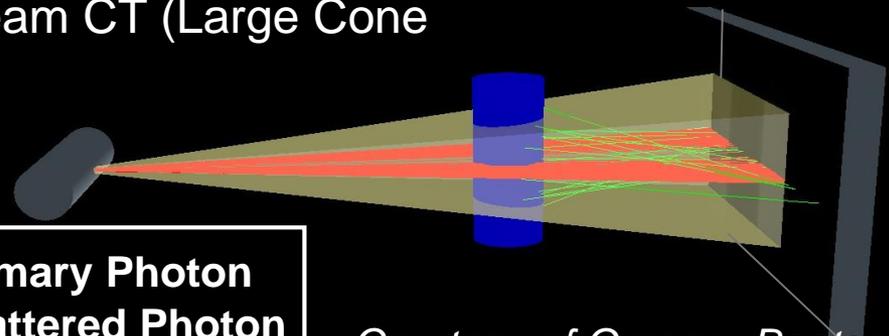

Cone Beam CT Image Quality

Traditional CT (Small Cone Angle)

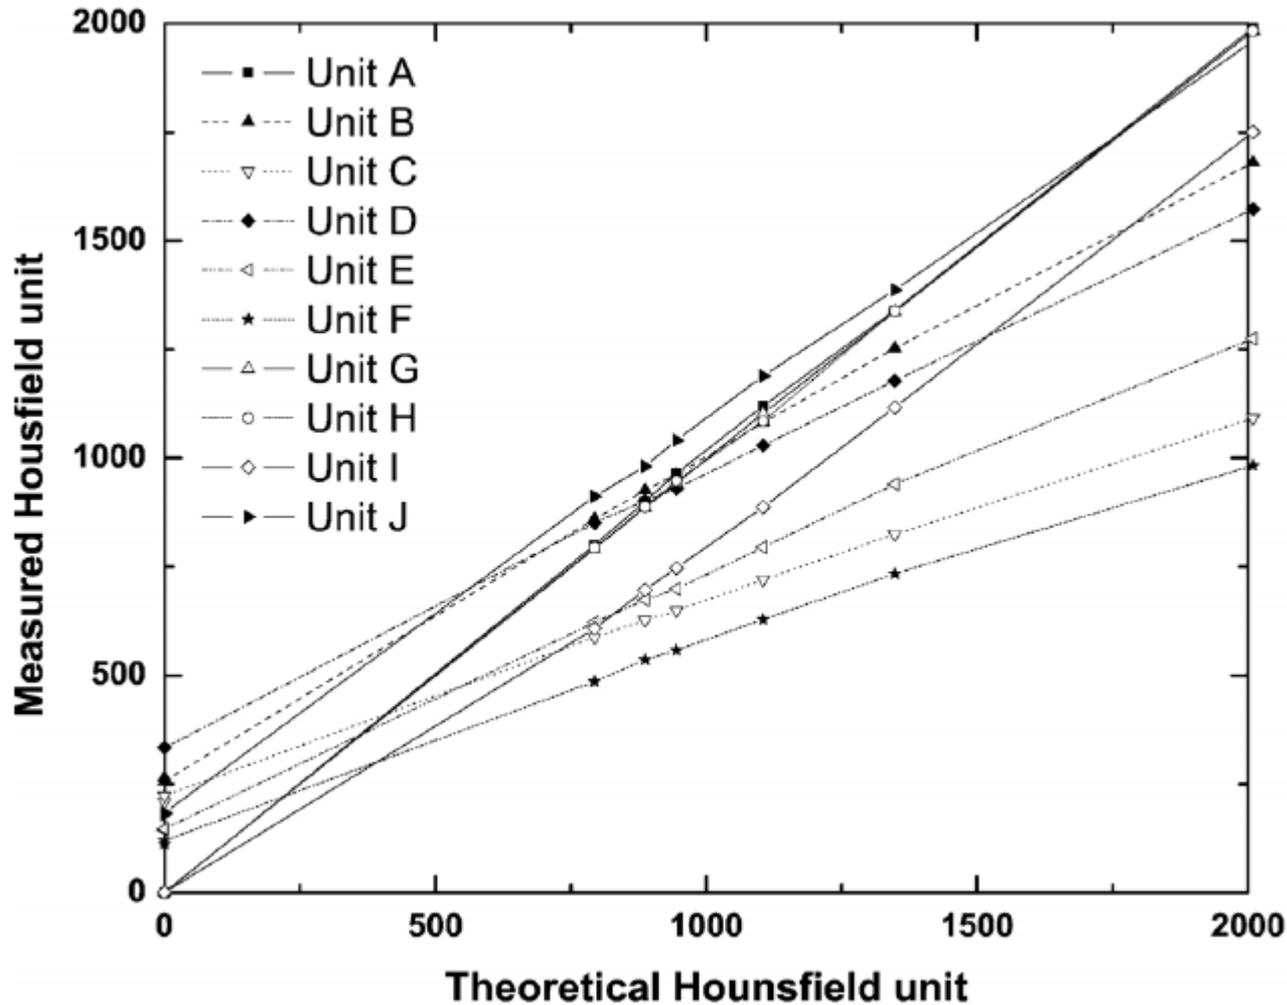

Cone-beam CT (Large Cone Angle)

— Primary Photon
— Scattered Photon

Courtesy of Gregory Bootsma

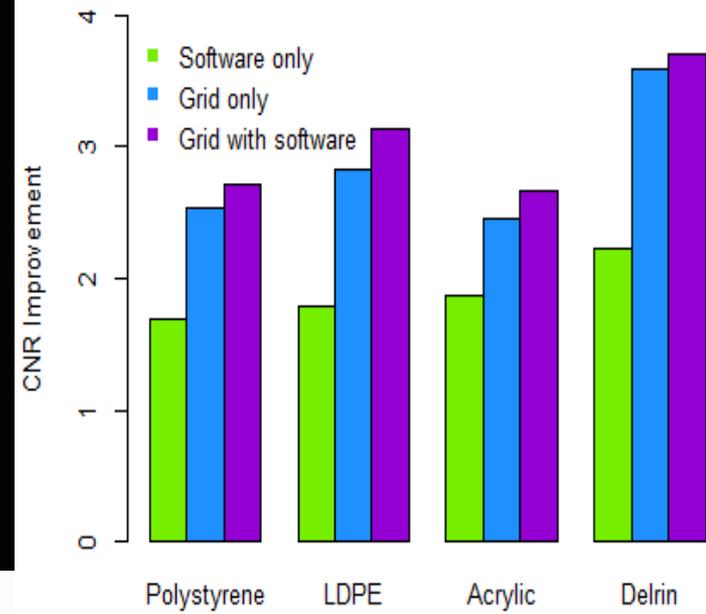

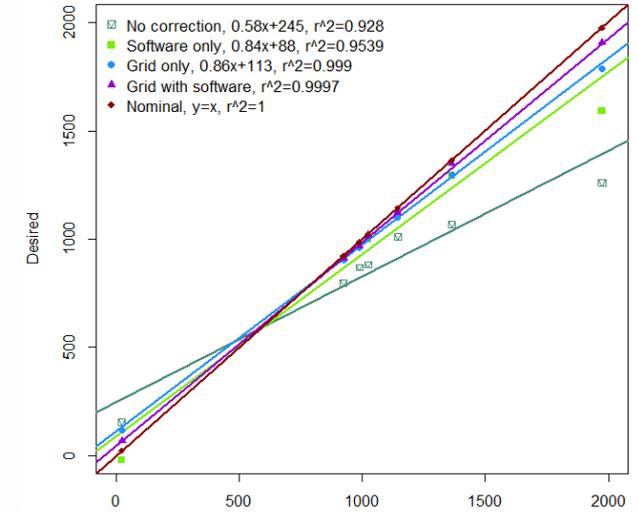

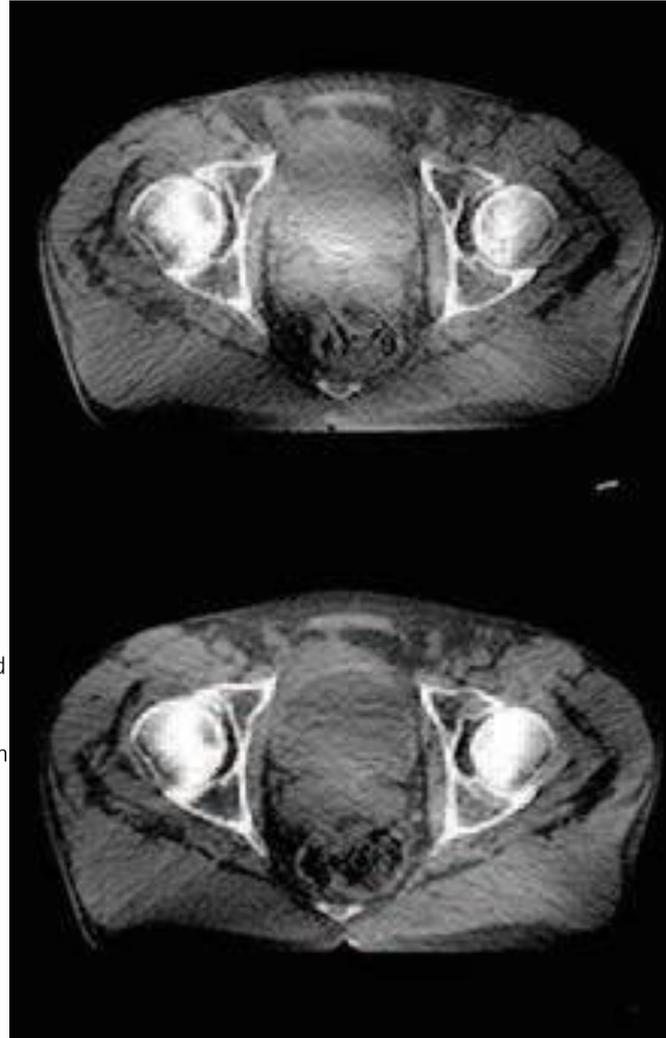

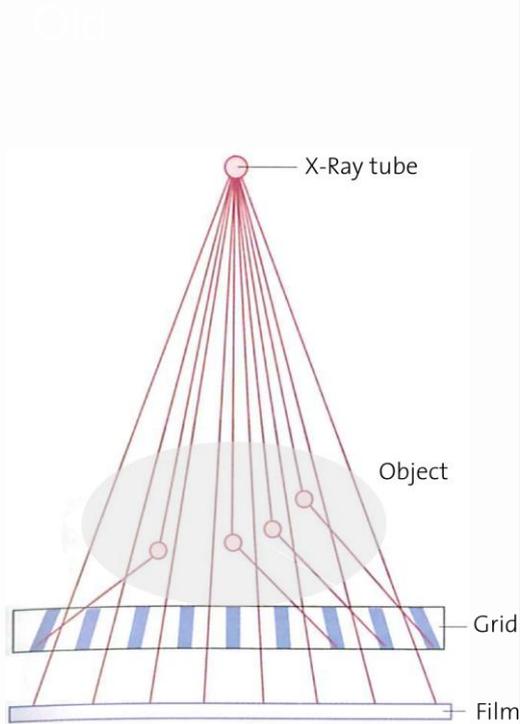

Linearity

Challenges

- How to improve quantitative CBCT
- How to mitigate motion artifacts
- How to improve soft tissue contrast

Impact of Anti-Scatter Grid

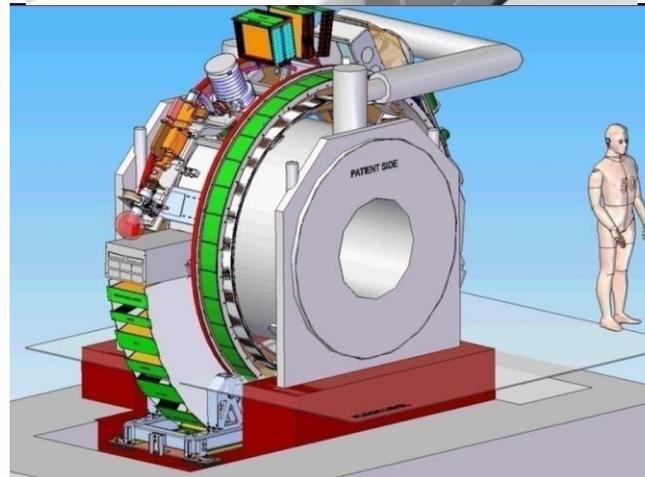

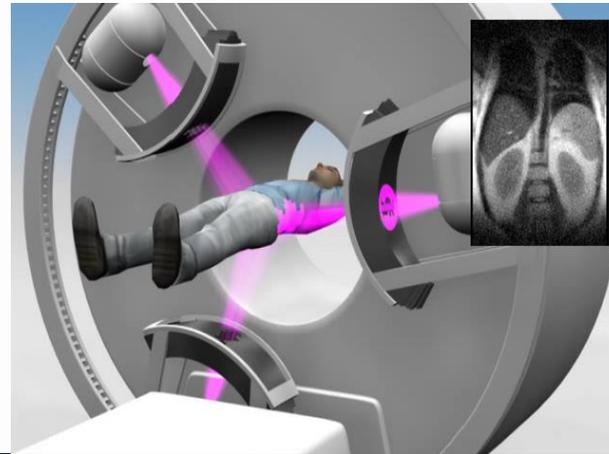

Diagnostic Quality

Diagnostic Quality CBCT

160 mm

In Room MRI

Better soft tissue contrast

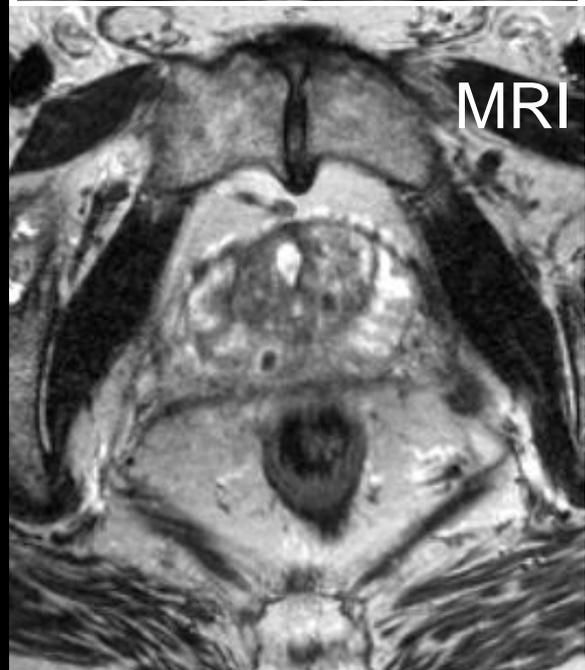

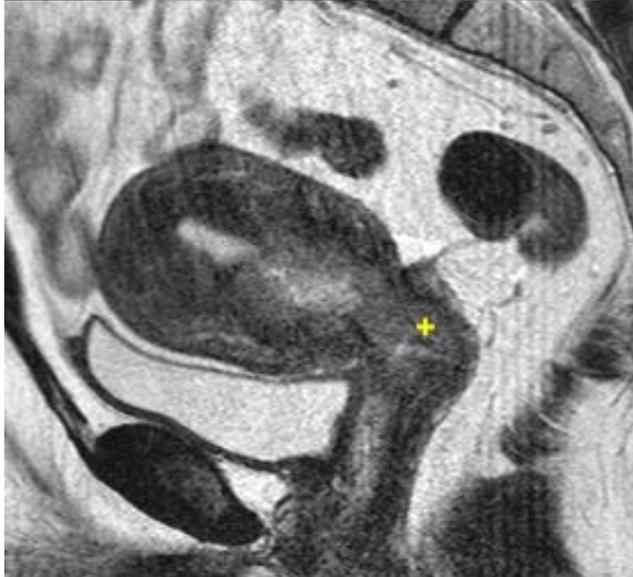

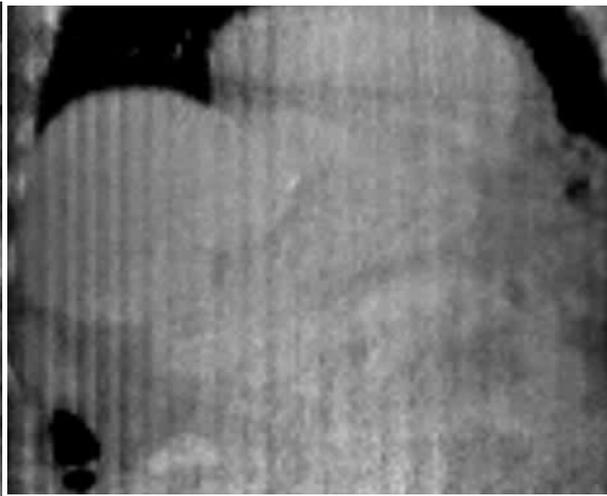

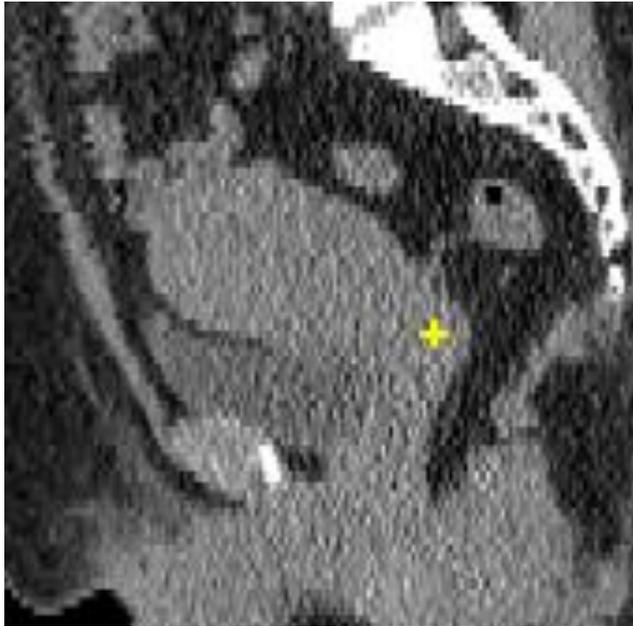

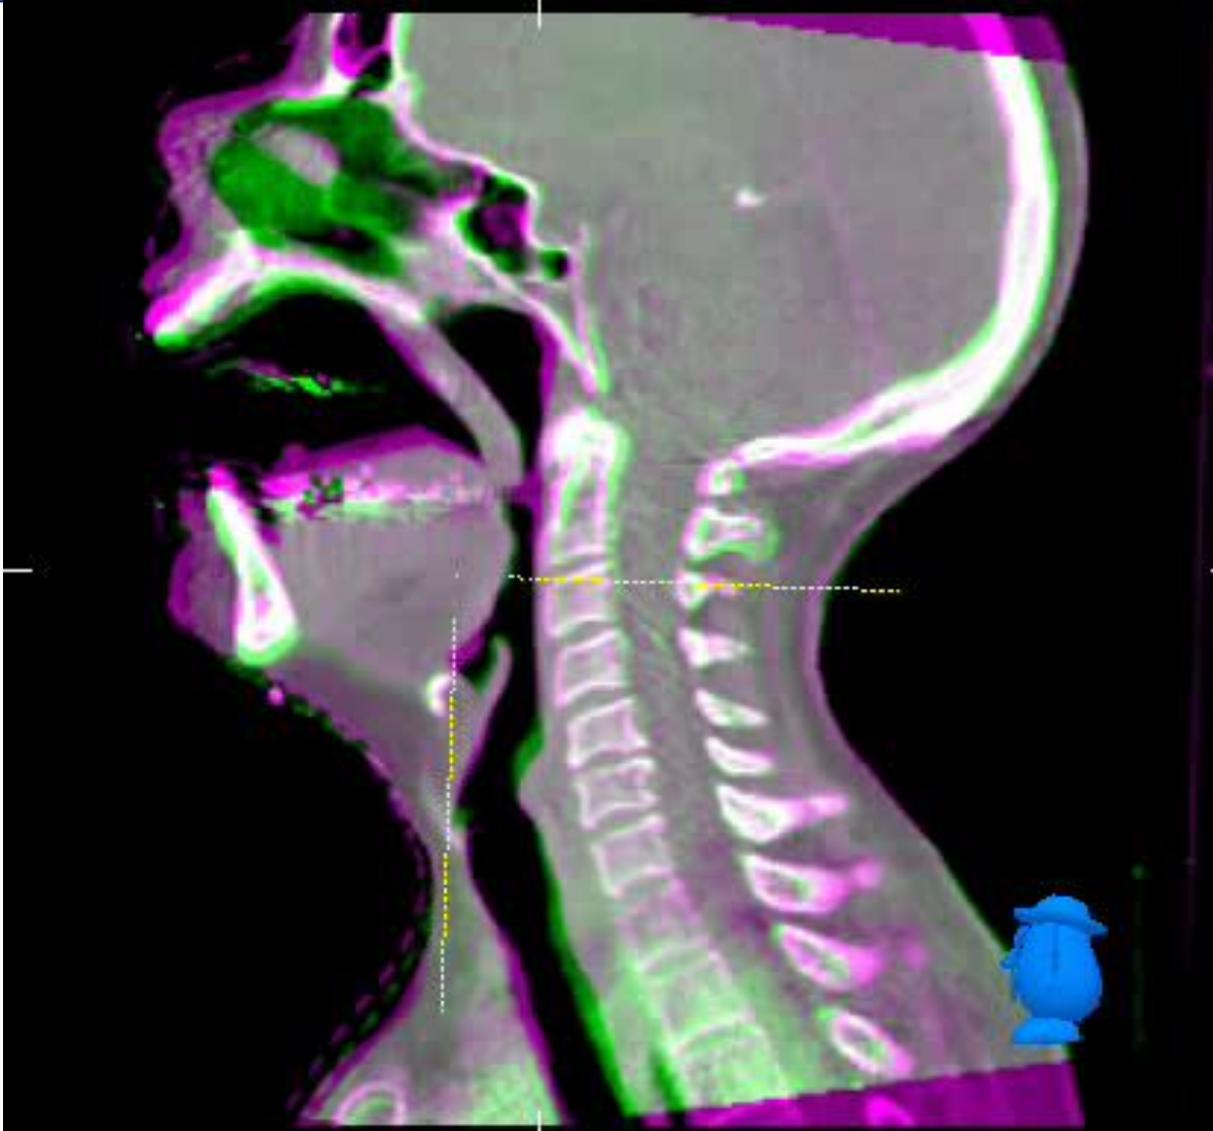

Image Registration

Full deformable registration

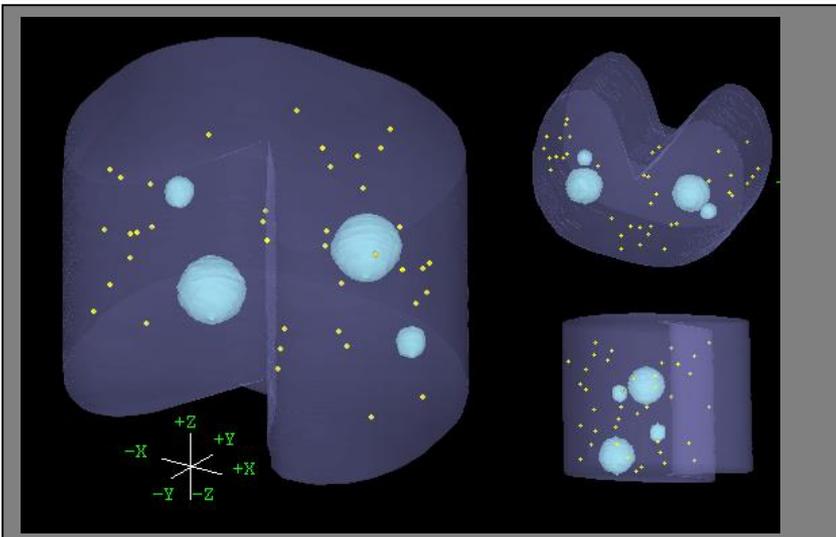

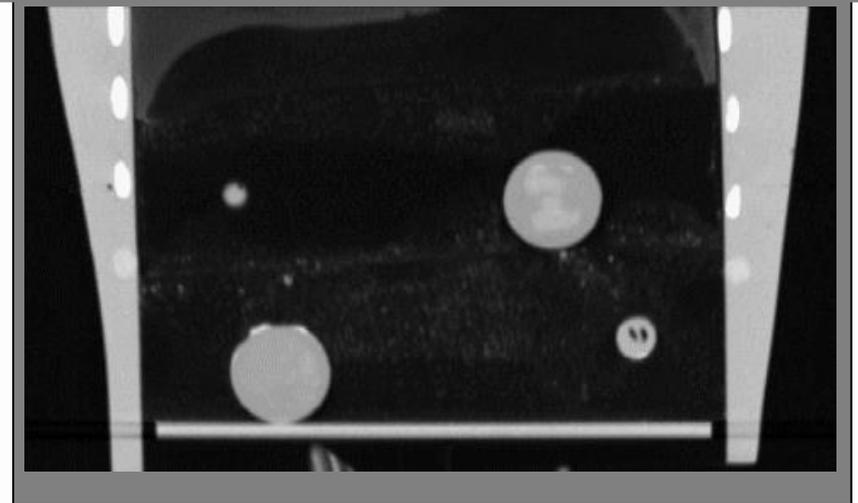

Cubic B-splines, Mutual Information

Challenges

- How to quantify the accuracy
- How accurate is deformable registration
- How accurate should it be

Phantoms

		RL ^a (cm)	AP ^b (cm)	SI ^c (cm)	3-D distance (cm)
Affine	Average	-0.01	0.00	0.05	0.38
	Stdev ^d	0.04	0.04	0.44	0.22
	Max ^e	-0.12	-0.13	0.90	0.90
B-splines	Average	-0.02	-0.01	0.05	0.18
	Stdev ^d	0.08	0.06	0.22	0.16
	Max ^e	-0.42	0.19	0.67	0.81
Thin-plate splines	Average	-0.07	-0.15	-0.14	0.37
	Stdev ^d	0.12	0.19	0.28	0.19
	Max ^e	-0.56	-0.58	-0.74	0.75

Analysis of variance

$$\sigma_1^2 = (\sigma_{2-1}^2 + \sigma_{3-1}^2 - \sigma_{3-2}^2) / 2$$

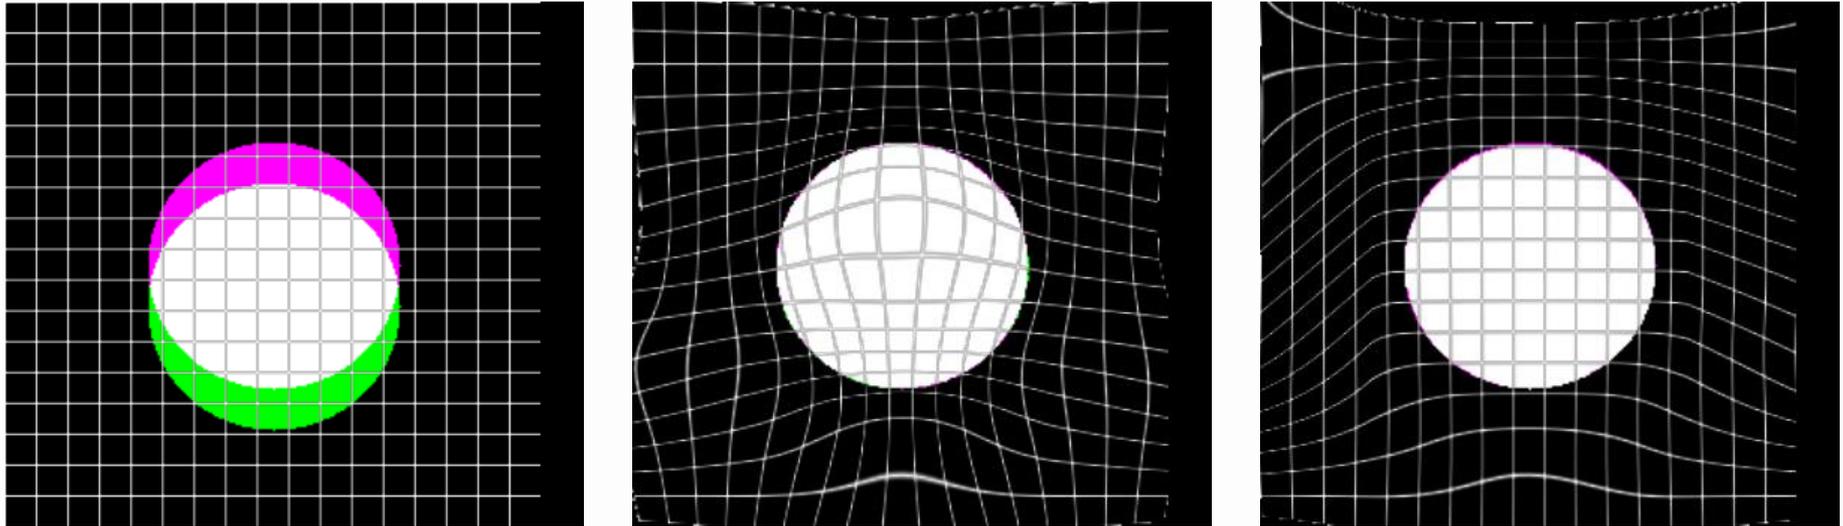

$$\sigma_2^2 = (\sigma_{3-2}^2 + \sigma_{2-1}^2 - \sigma_{3-1}^2) / 2$$

$$\sigma_3^2 = (\sigma_{3-1}^2 + \sigma_{3-2}^2 - \sigma_{2-1}^2) / 2$$

Landmarks:	Bony			Soft-tissue		
	LR	CC	AP	LR	CC	AP
Human observer	0.8	0.7	0.9	0.9	1.4	1.0
Deformable registration	1.1	1.3	0.8	1.0	1.3	1.0

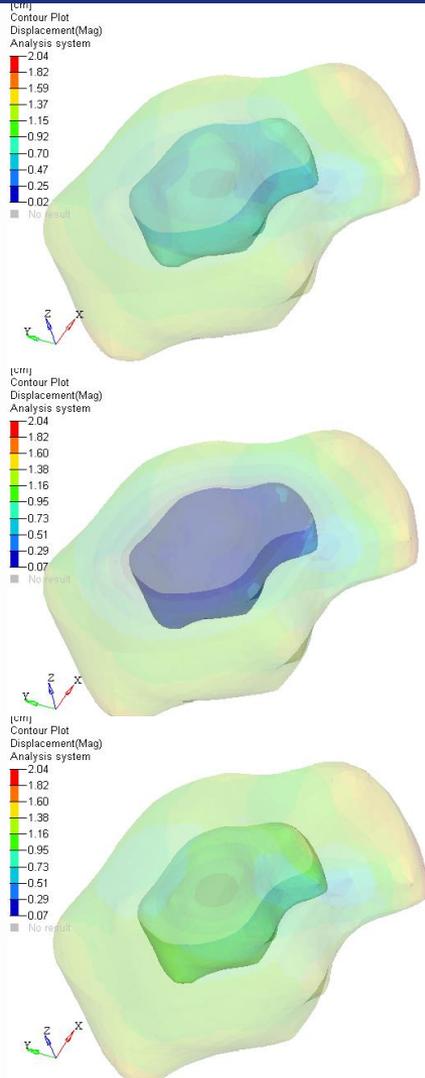

Deformable registration classes

Different DVF provide same visual registration result

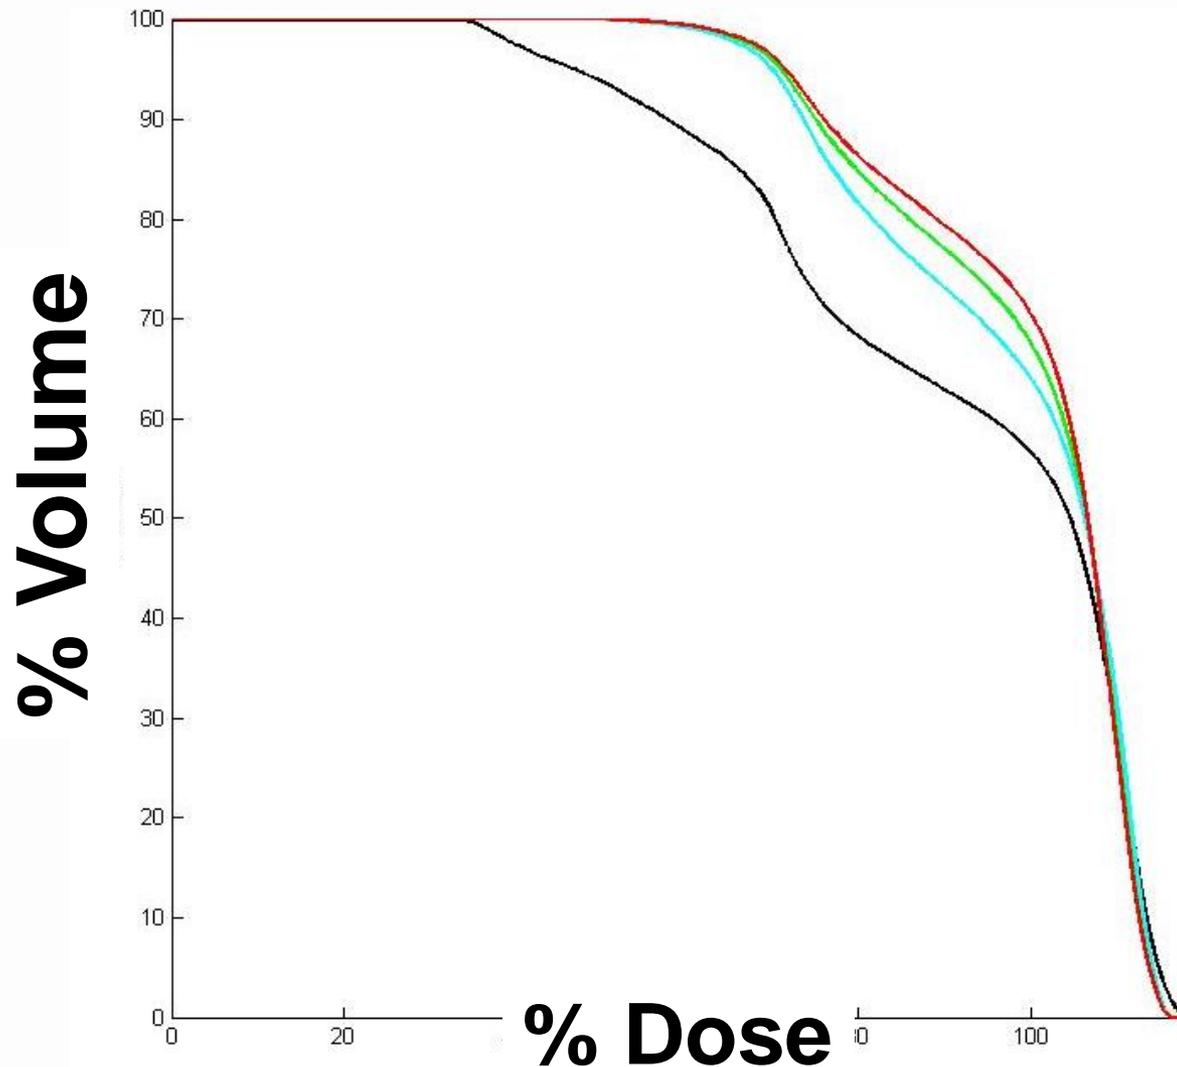

- Descriptive: it must look good
 - e.g. contour propagation
- Quantitative: it must be an anatomically correct, also inside homogeneous organ
 - e.g. dose accumulation

Modeling Volume Reduction

- Tumor with ‘core’
- Heterogeneous plan
- Variation in volume reduction
 - Homogeneous
 - Dissolving rim
 - Necrotic Core

Modeling Volume Reduction Dosimetric Effect

Homogeneous

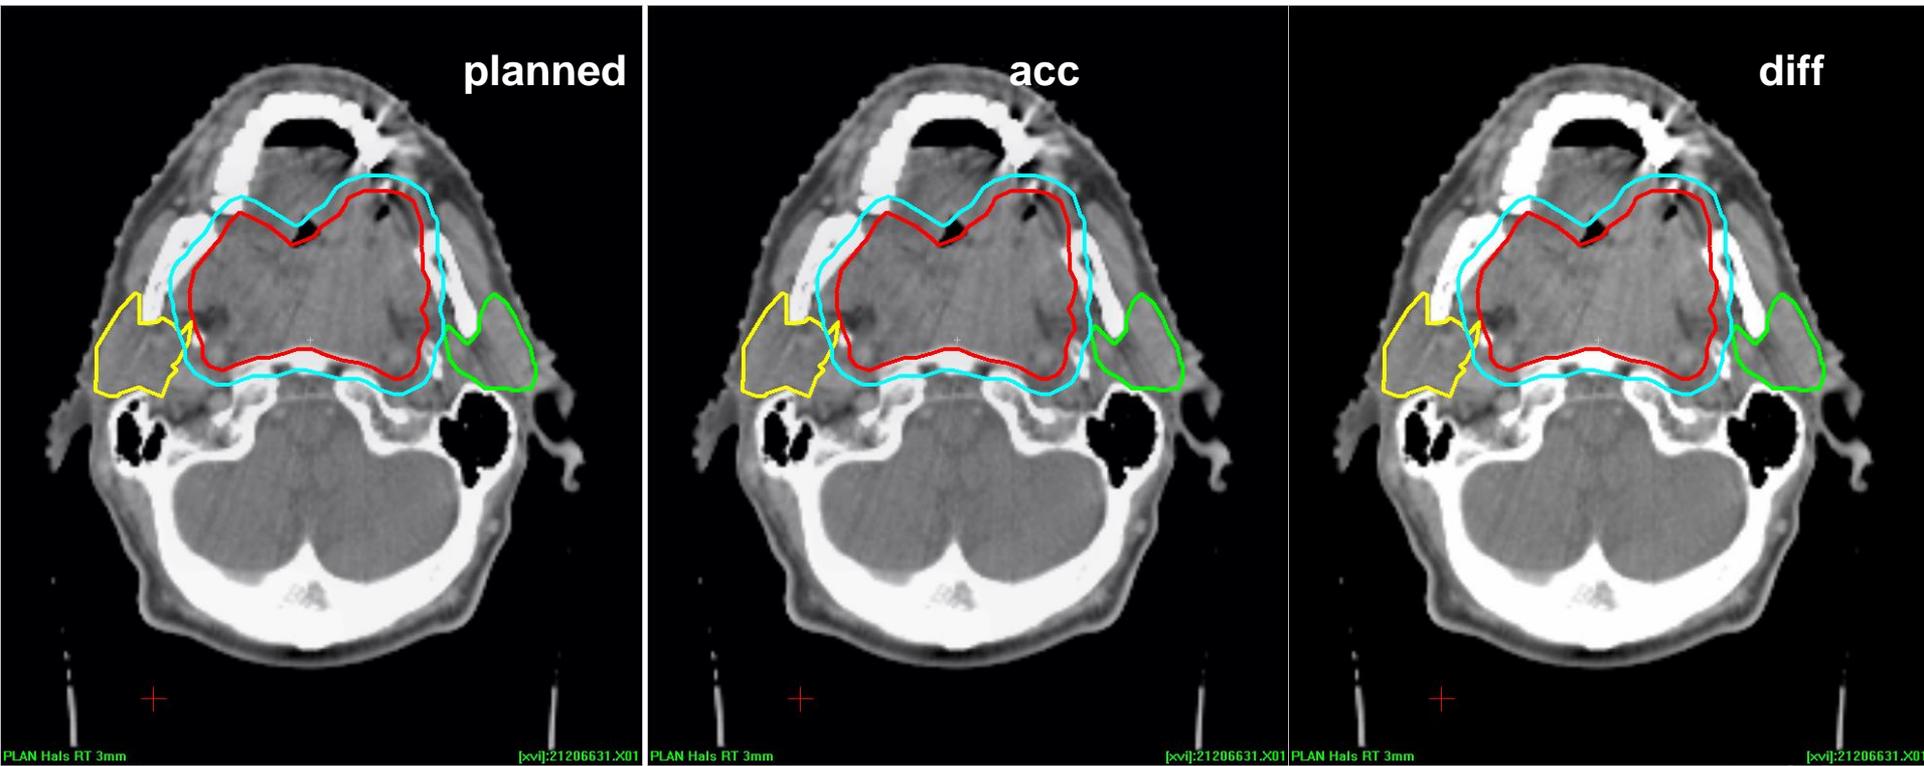

Necrotic Core

Dissolving Rim

Plan

Dose Accumulation

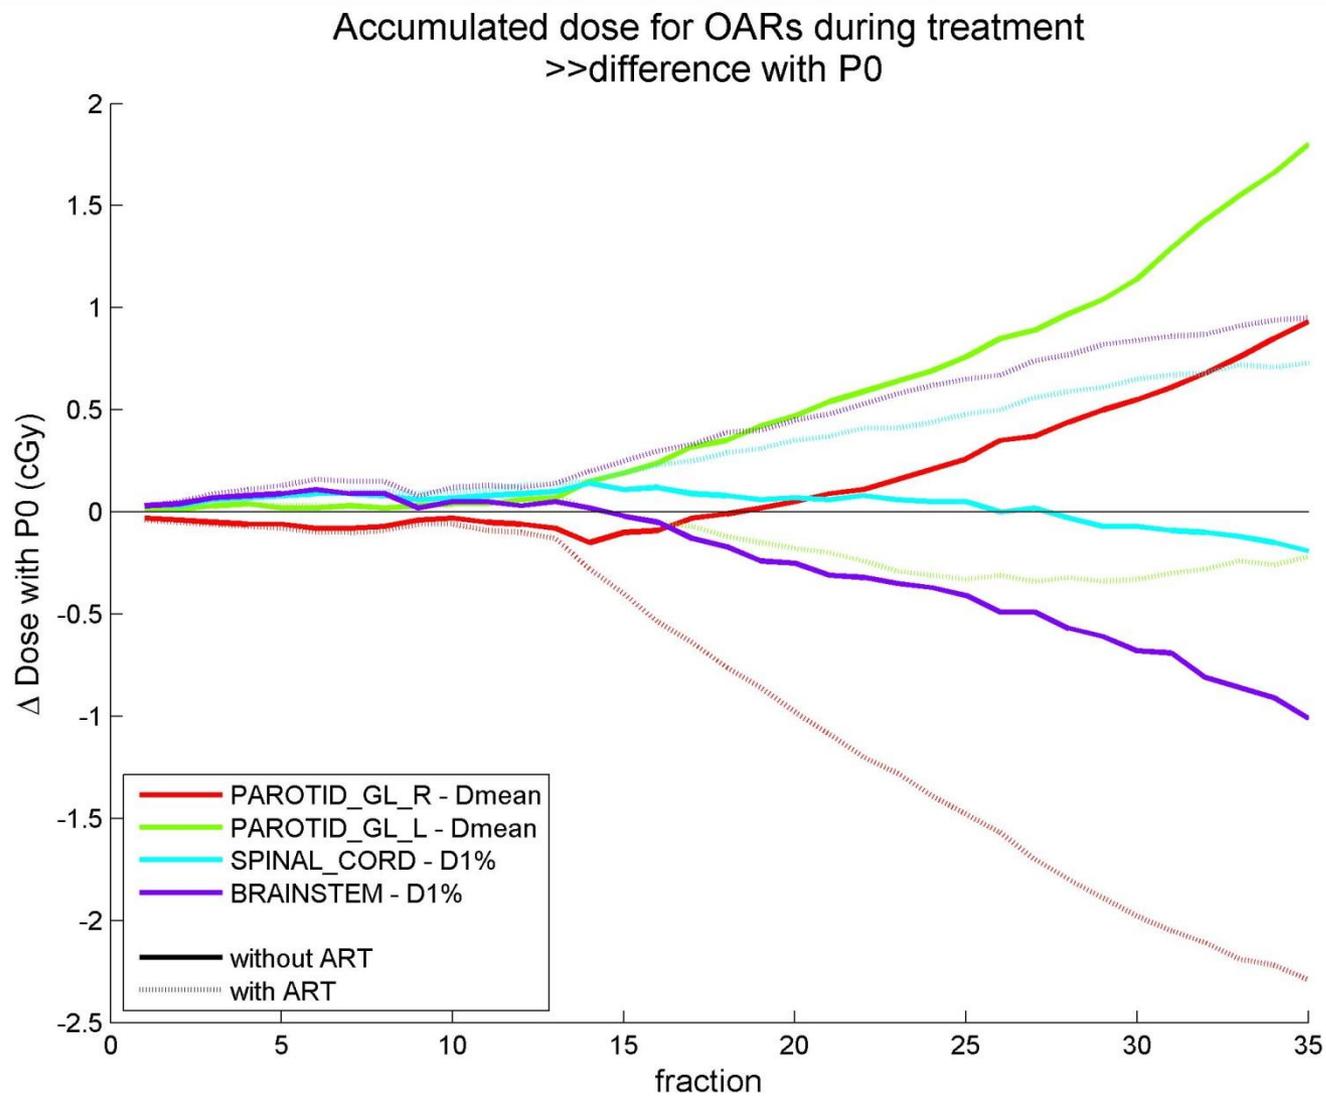

Dose accumulation

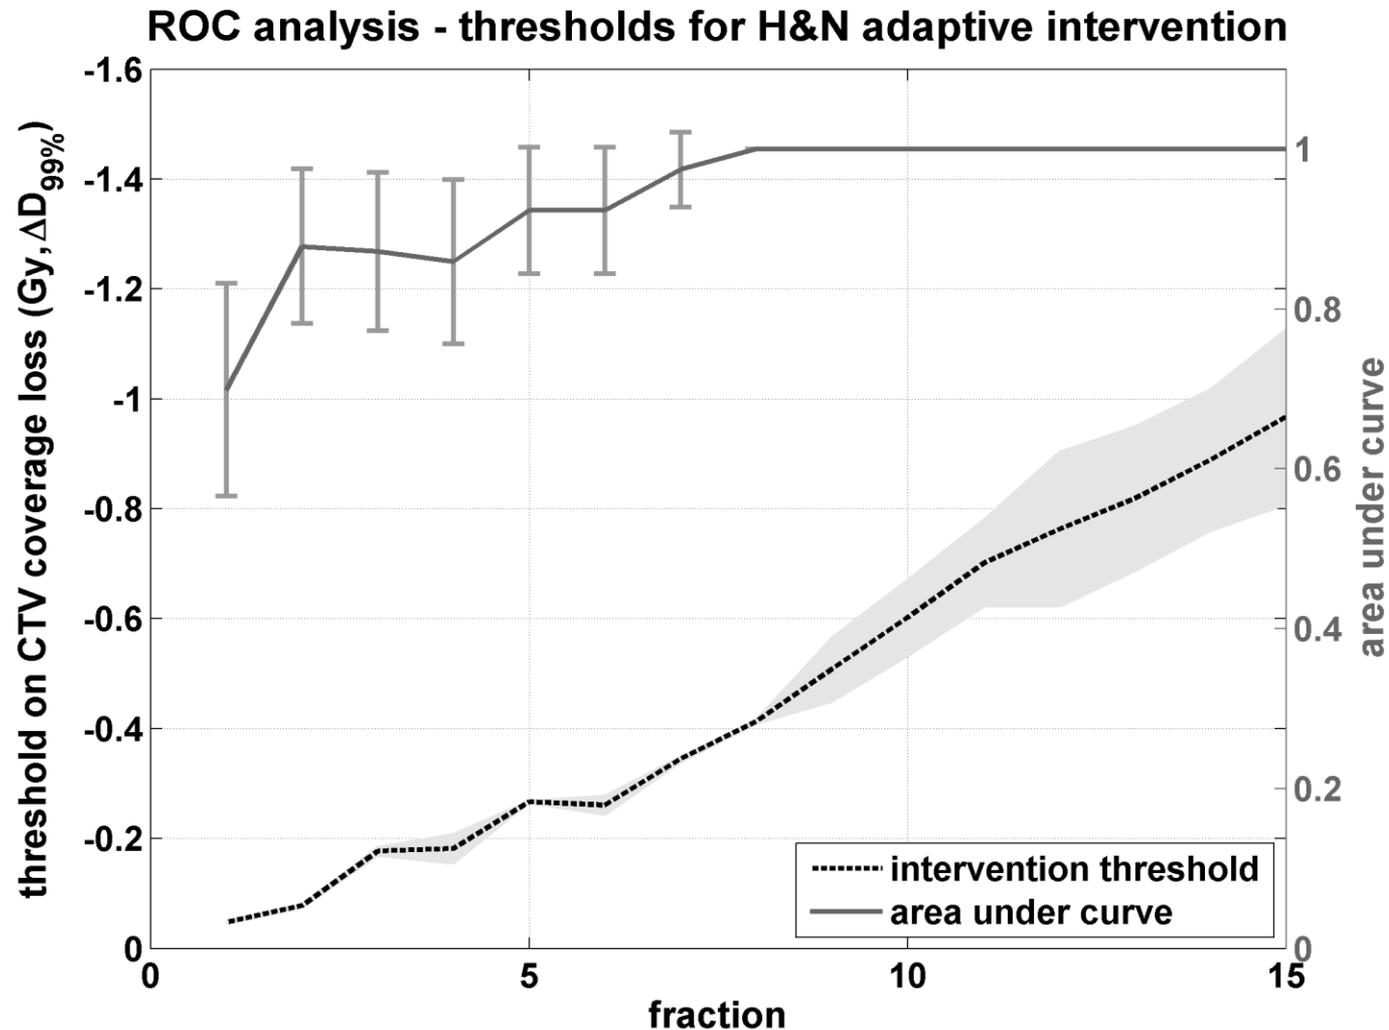

Challenges

- How to incorporate registration and other uncertainties
- How to define threshold for intervention
- Is there indication that accumulated dose has clinical relevance

Dose accumulation during treatment

Thresholds for intervention

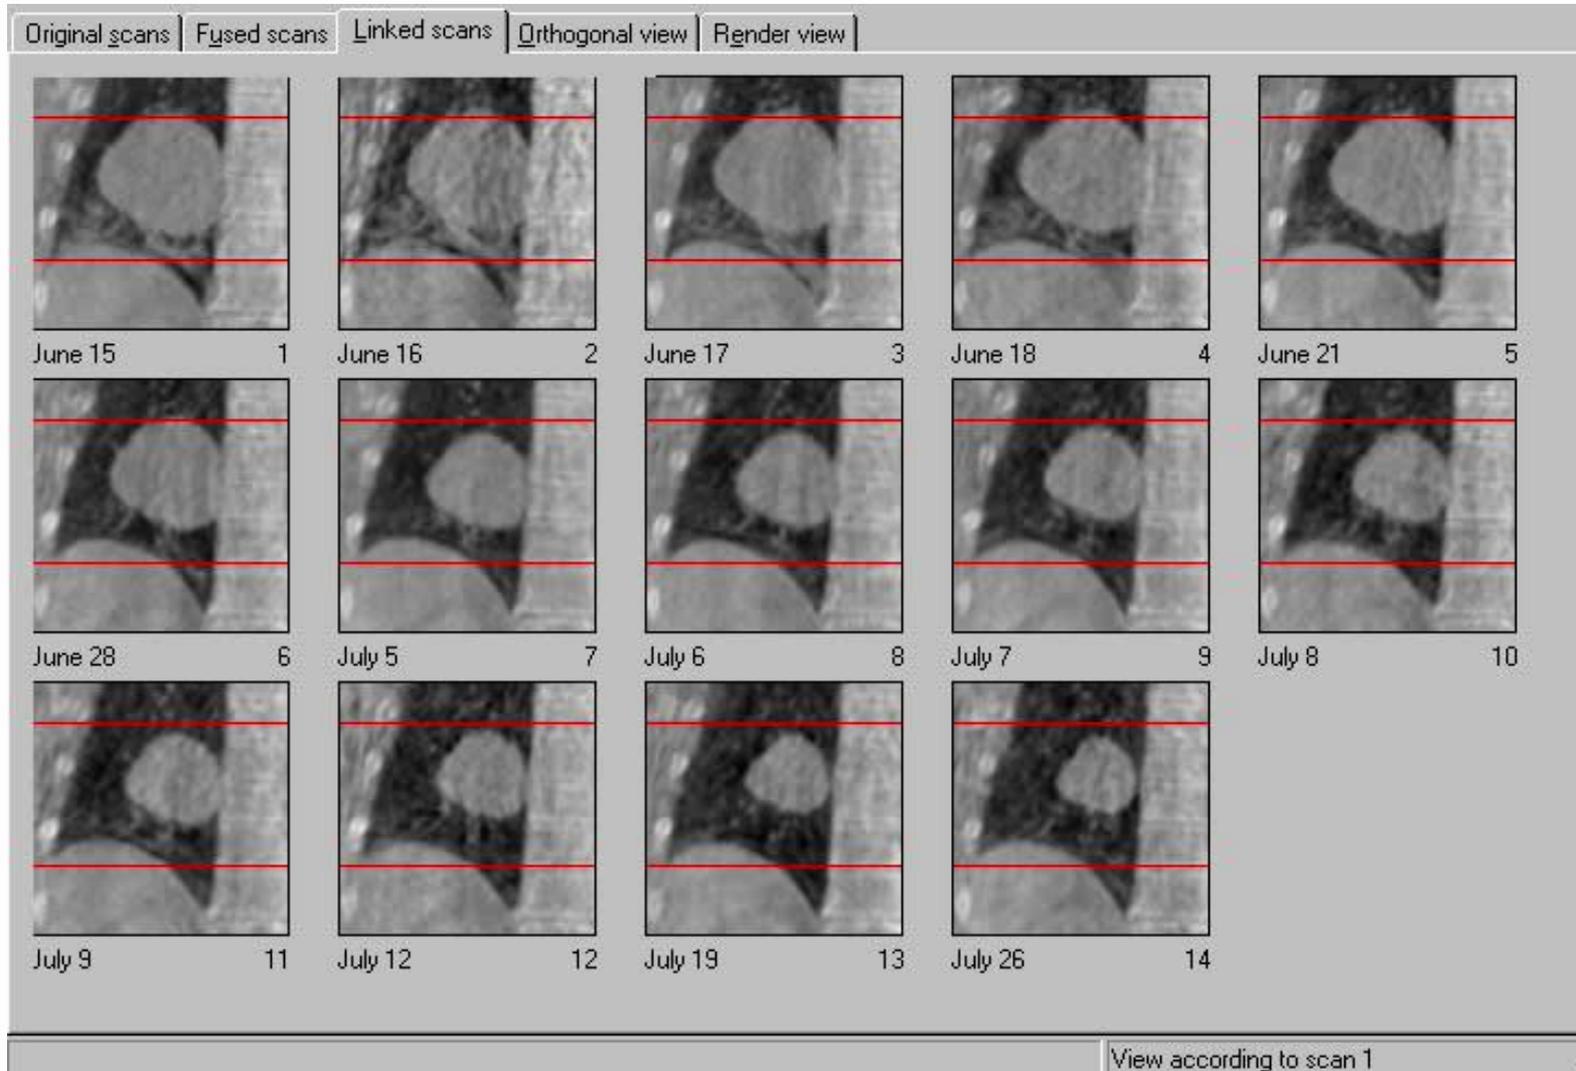

Improved Correlation with Outcomes

- 93 patients, 172 liver metastases
- Delivered doses to GTV calculated using dose accumulation, deformable image registration of daily CBCTs
- Greater local recurrence risk reduction with accumulated min GTV dose vs. planned min PTV dose
 - Hazard ratio: 0.45 vs 0.55 for each 10Gy increase in dose

Tumor Regression

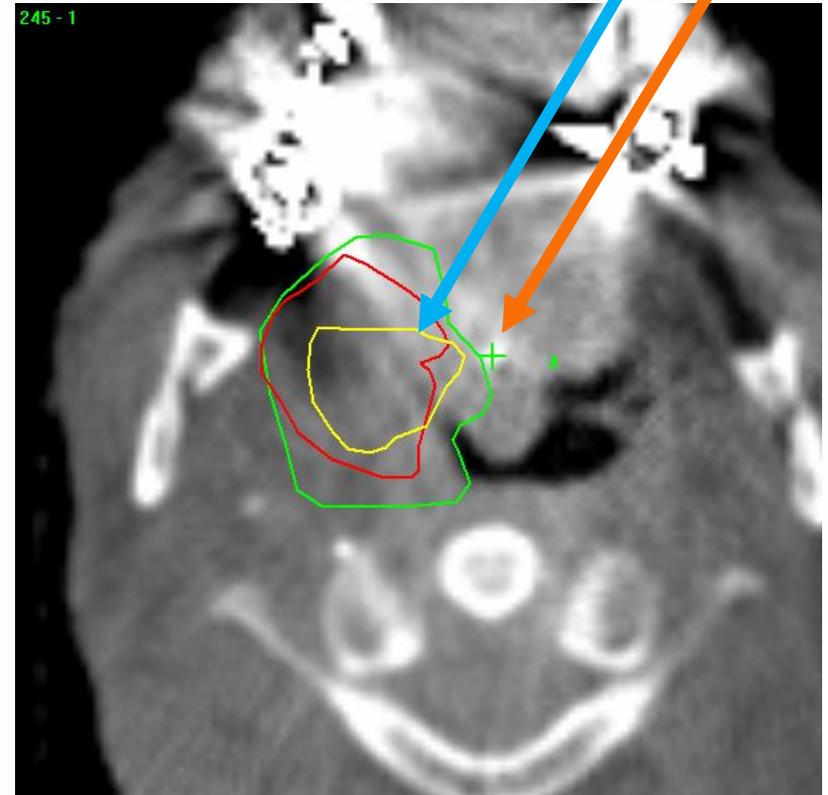

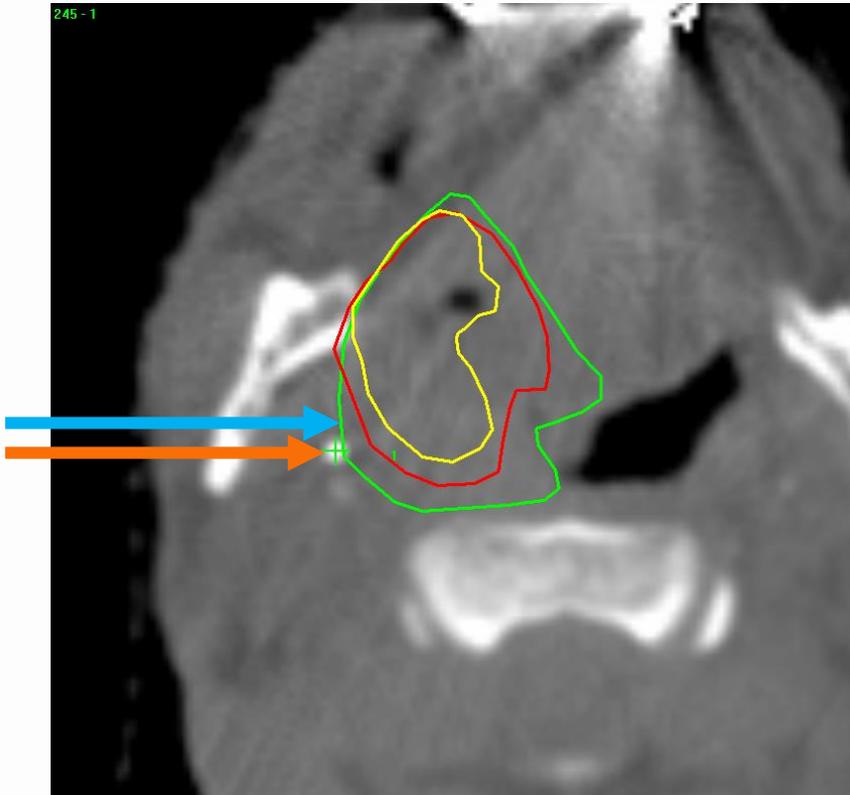

Tumor regression over the course of treatment

Challenges

- Can we safely adapt to regressing tumors
- Can we accurately register regressing tumors

Results: Example marker displacement

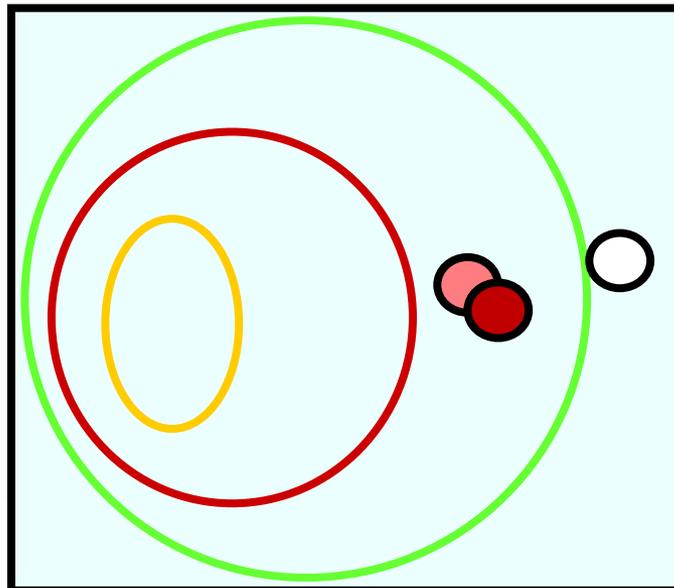

- GTV on MRI Pre treatment
- GTV on MRI Week 3
- GTV on MRI Week 6

Marker position:

- Fraction 1
- Fraction 35

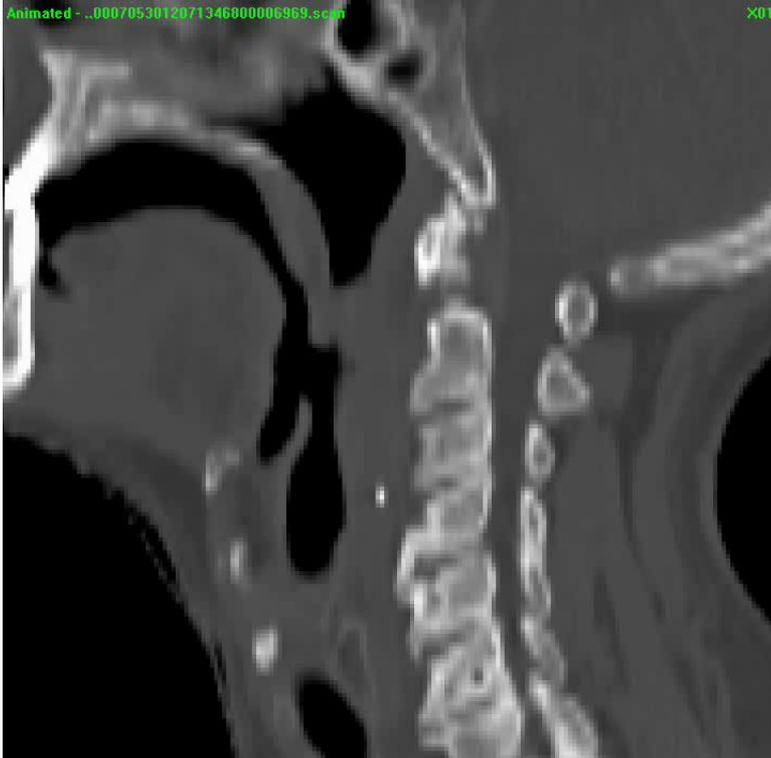

Results: Average in 6 patients

	W1→3	W1→6
Average marker displacement (cm)	0.27	0.24
Average surface displacement (cm)	0.37	0.75
% GTV reduction captured by markers	75%	31%

- MRI GTV pre treatment**
- MRI GTV week 3**
- MRI GTV week 6**
- Average marker position w1**
- Average marker position w3**
- Average marker position w6**

Tissue-to-Tissue Correspondence?

	LR	CC	AP	Vector
Landmarks in normal tissue	1.0	1.6	1.2	2.2
Fiducials Tumour regions	2.0	2.1	1.5	3.3

Plan Adaptation

Time needed for H&N treatment plan

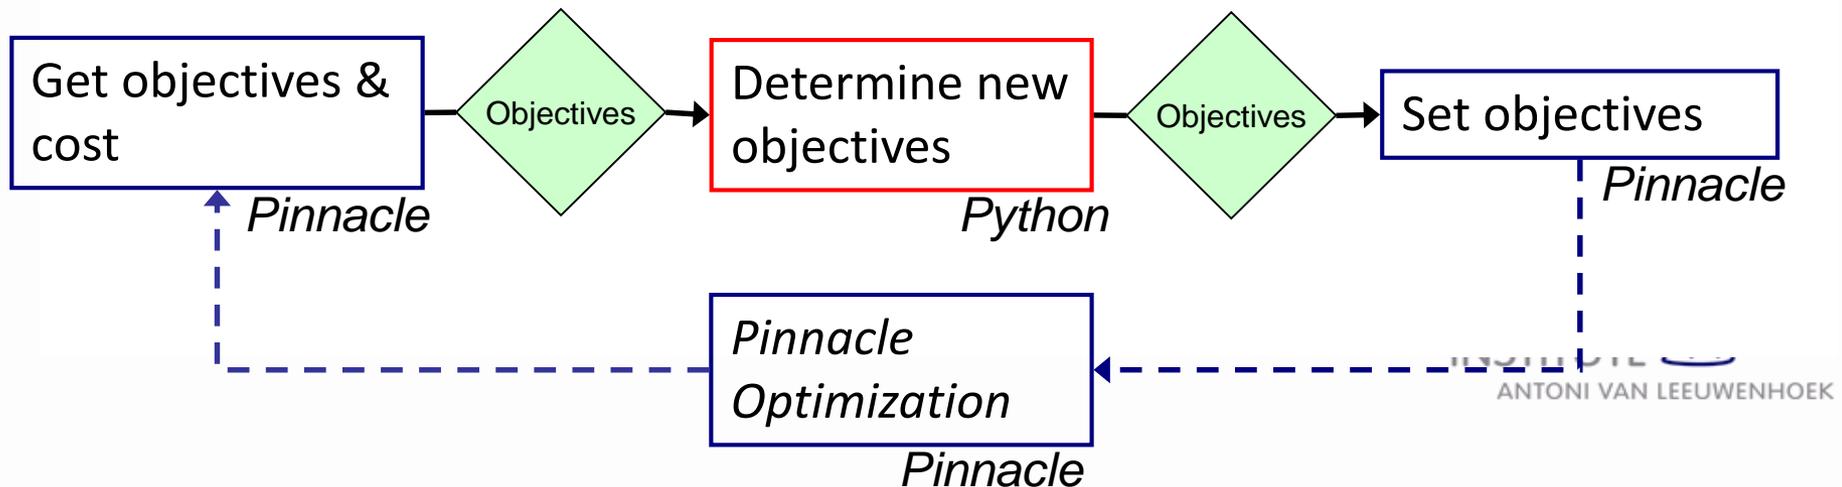

1. Import scan/delineate OARs	80 min
2. Beam setup/objectives (scripts)	20 min
3. Optimize	200 min
4. Export Pinnacle/import Mosaiq	50 min
5. Check plan	30 min
Total	~ 7 hour

Challenges

- Workload of adaptive planning too high for large scale implementation
- How to automate planning
- How to reduce workload

Automatic optimization

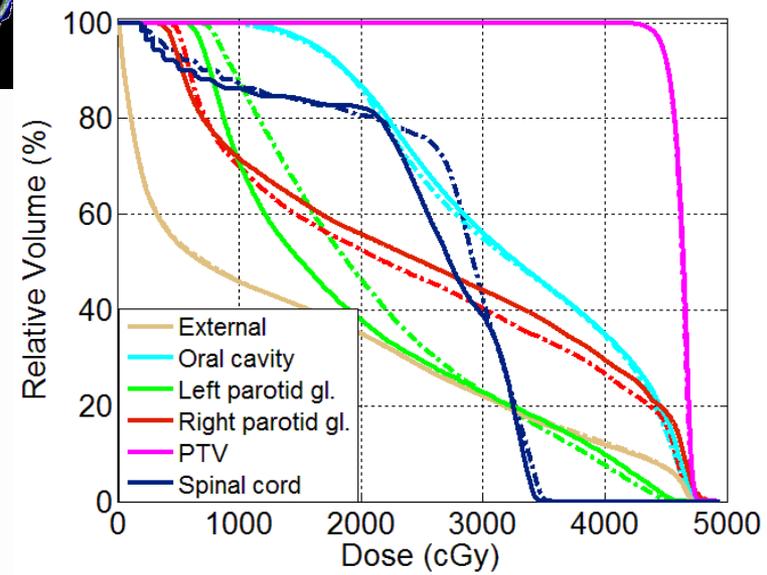

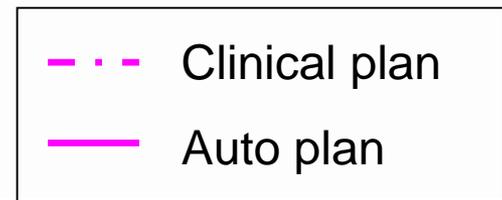

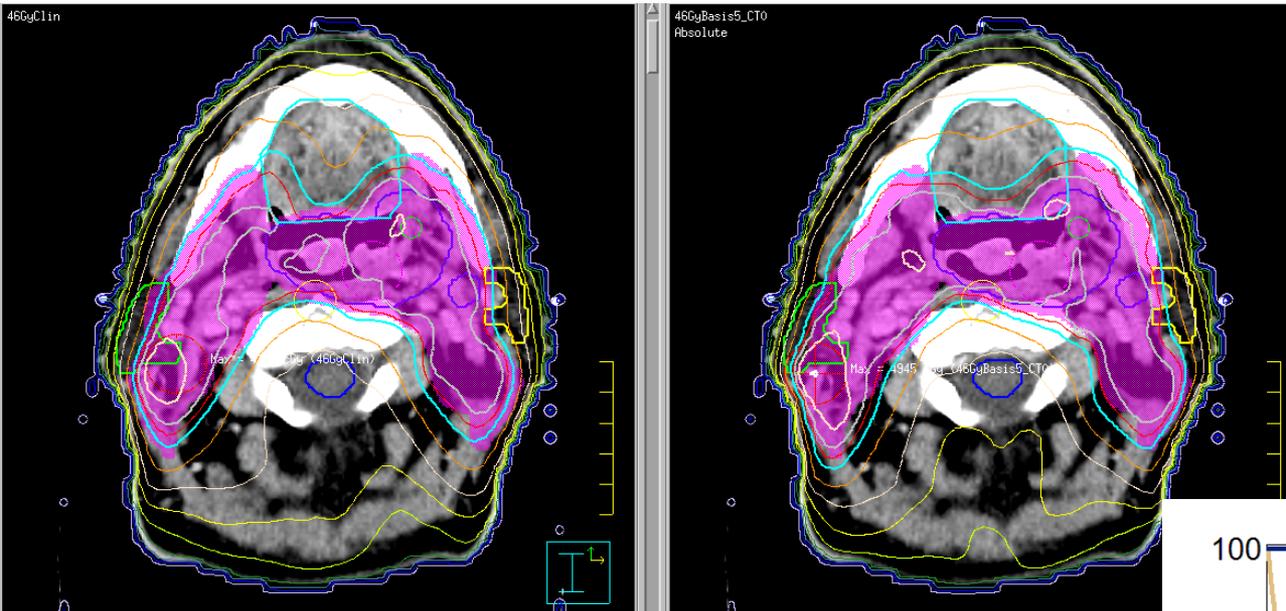

- 1st round, only objectives on: PTV's, Brainstem, Spinal cord, Ext-PTV+5
- systematically lower other objectives with 1Gy/round compared to obtained value (if penalty ≈ 0)
Prescribe to $V_{95\%}=99\%$ in each round
- Repeat until all objectives create relevant cost

Automatic optimization: example

Clinical plan

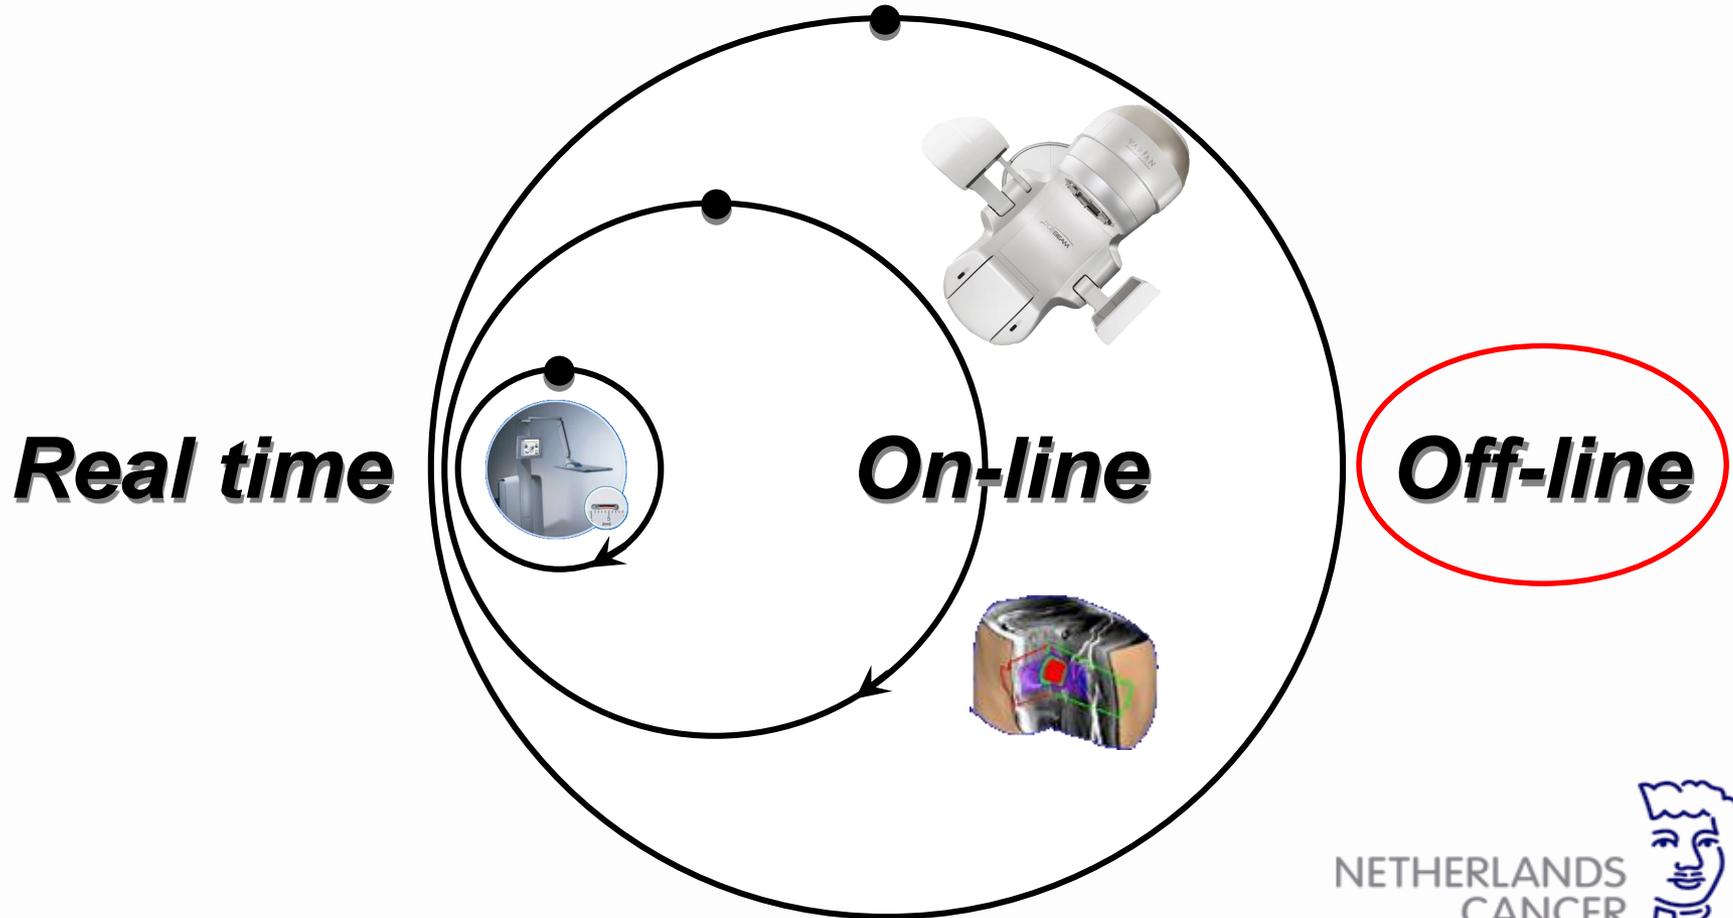

Automatically optimized plan

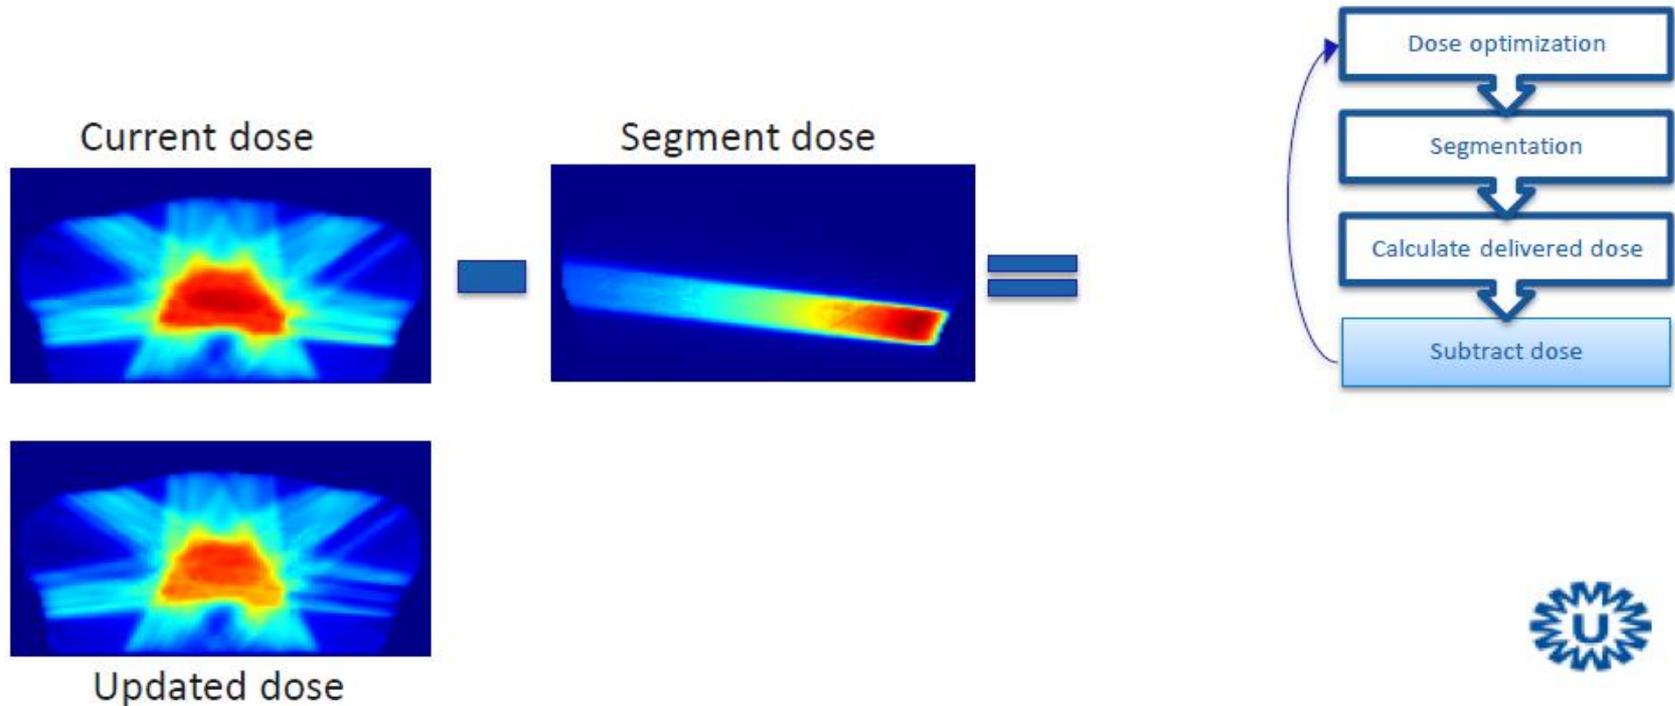

Autoplanner Prostate

- 10 clinical and automatically generated plans
- Evaluated by clinicians and dosimetrists
- Autoplan optimization: 30 minutes
- All automatic plans were clinically acceptable
- Clinicians preferred autoplan in 65%, dosimetrists 50%

Temporal Scales of Intervention

Adaptive Sequencing

Order Tolerance staat de tolerantie tabel.
 ESK staat orde bestrijlingsplaat door met tolerance: XRAY.
 Pas dit aan indien nodig.

Tolerantie Tabel

Tolerance: 1 XRAY

Tolerance Table

Factor	1 XRAY
Ap Angle	2 Elektronen
Ap Angle	3 ELEKTRON7
Ap Angle	4 SB
Ap Angle	5 alles mag
Ap Size X	6 XRAY tabel
Ap Size Y	7 XRAY PIN
Ap Size X	8 MET DELET
Ap Size X	9 Instabiel

Tolerantie tabel 1 XRAY: bij instellingen met een ITA.
 Tolerantie tabel 7 XRAY PIN: bij instellingen met een pin afstand.
 Tolerantie tabel 2 Elektronen: bij instellingen waarbij geen toleranties gelden.
 Tolerantie tabel 3 ELEKTRON7: bij instellingen waarbij de gantry koekjes de tolerantie vast staat.

Klik op button Field Setup. Order staat ook in verschrift

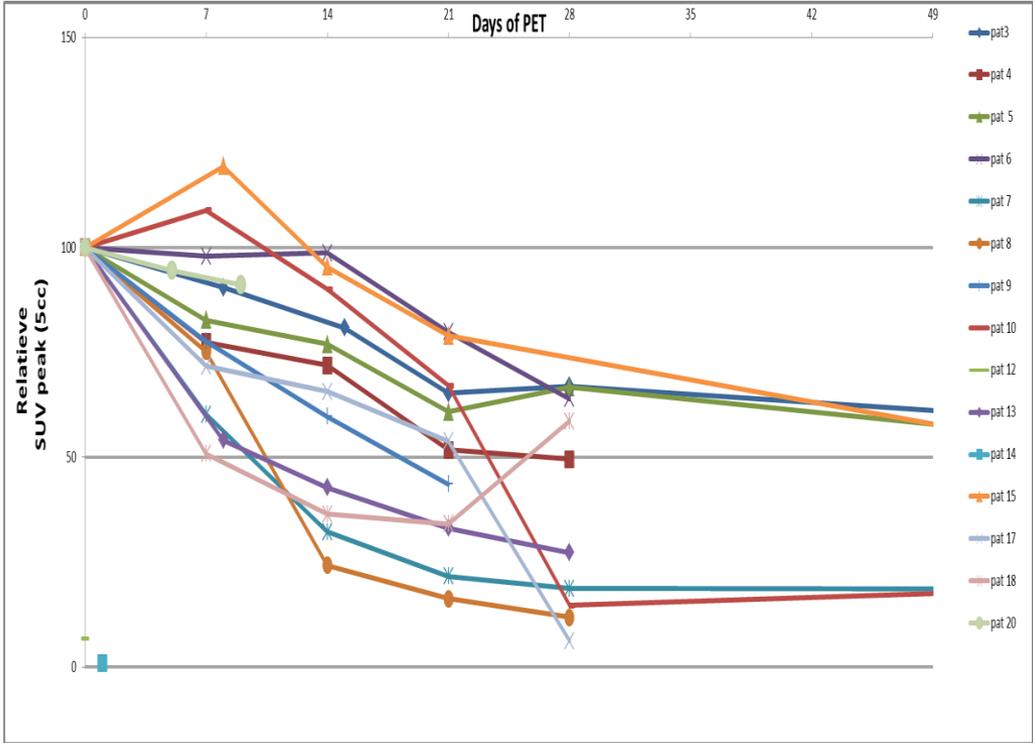

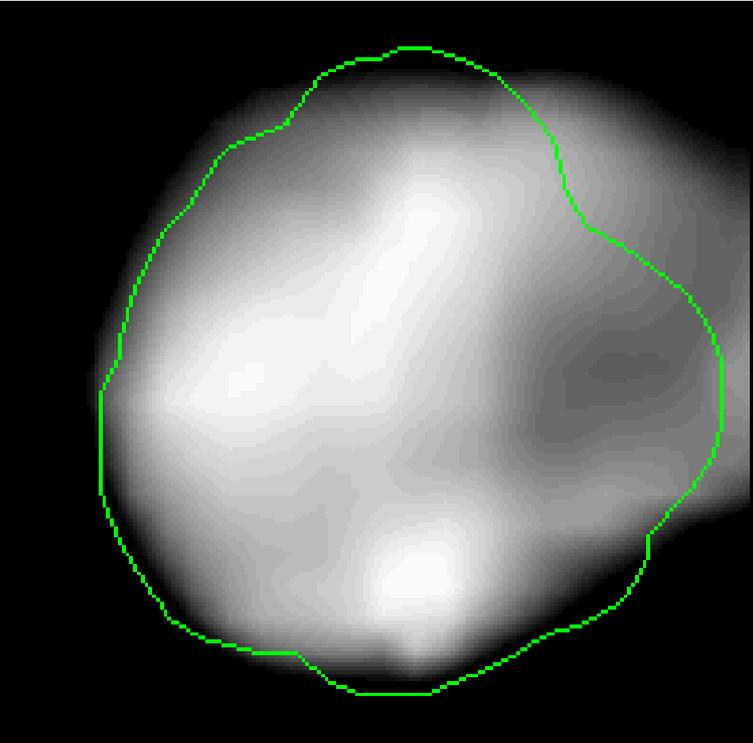

Notes of the sequence as bij de Field Setup in hoofdletters. Gebruik hierbij de eerste 3 regels anders is de tekst niet terug te zien in de bestrijlingsplaat (valt van het scherm af).

Zet een vinkje onderaan bij Display Field Setup First when Treating the Field.
 Dit kan van afgezet worden bij veld 1 waar het nodig is om eerste hulpmiddelen te bekijken voordat er wordt ingesteld bespaakt.

Als er een maal gebruikt wordt blauw veld veld, vol het nummer in bij het veld: Block.

Response Assessment

Response Monitoring in NSCLC Patients

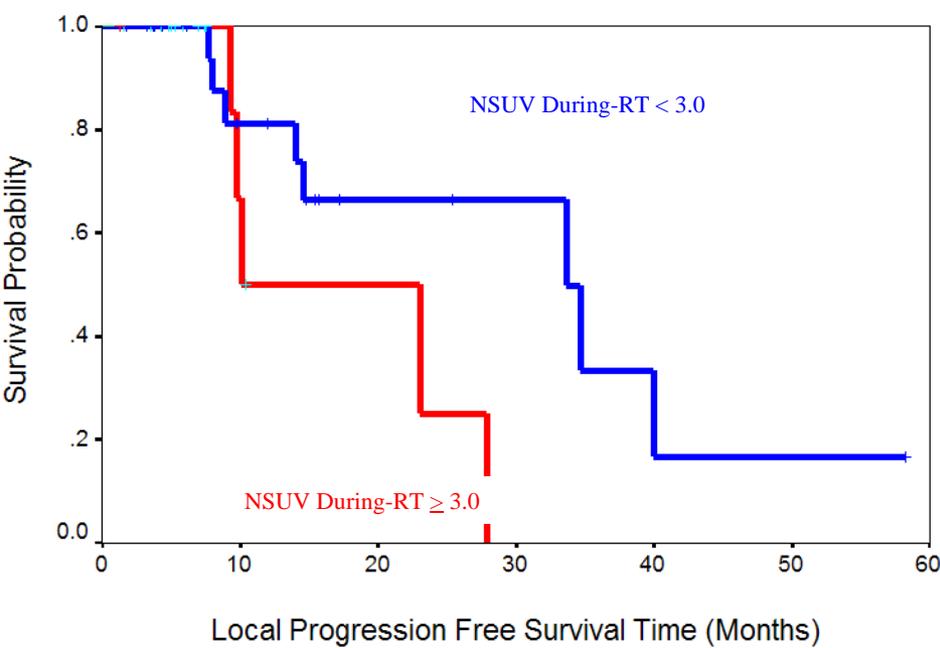

Challenges

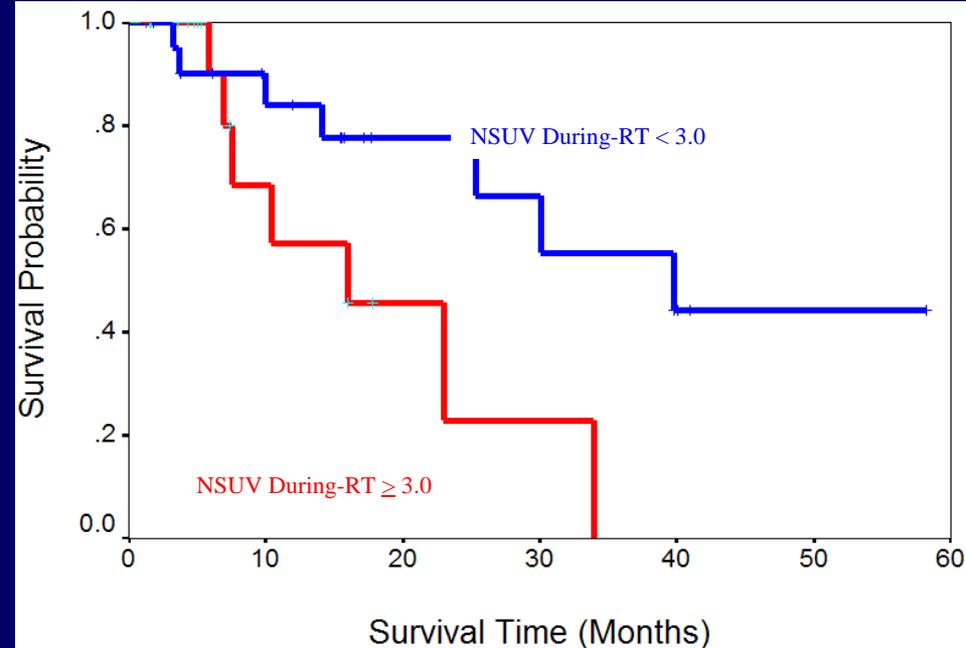

- How to quantify response
- Has it prognostic value
- Has it predictive value
- How to adapt to response

During-RT NSUV vs Survival

P=0.09

P=0.03

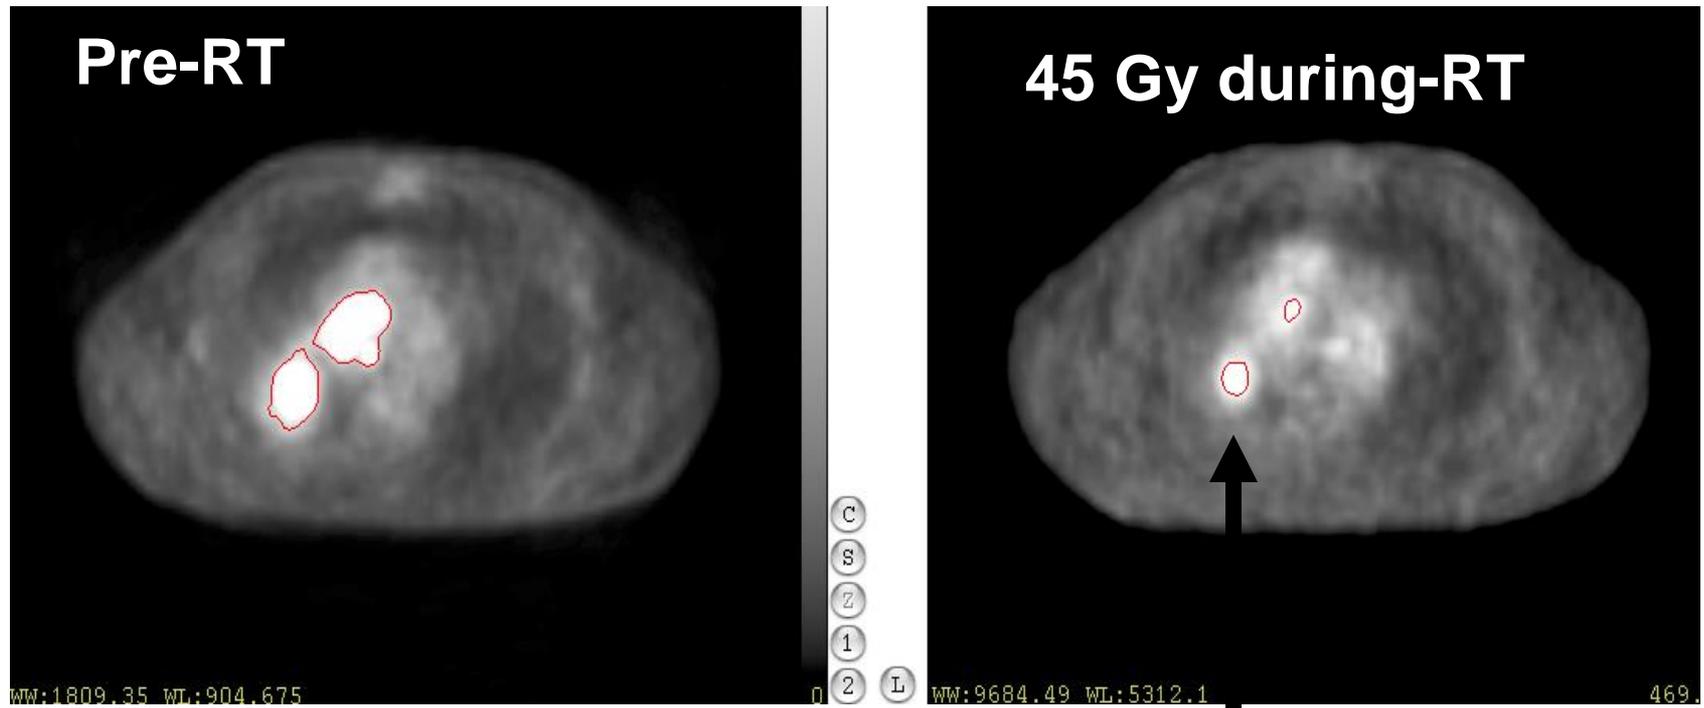

Local Progression Free Survival

Overall Survival

NSUV=SUVmax of tumor/SUVmean of aortic arch

RTOG 1106

During-RT PET to Guide Adaptive RT

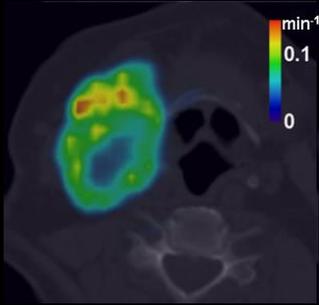

Experimental arm:

21x2.2Gy + re-PET/CT after 18 fr, replan for 9x2.2-3.8Gy up to a MLD of 20Gy, ≥ 50 Gy to original PTV

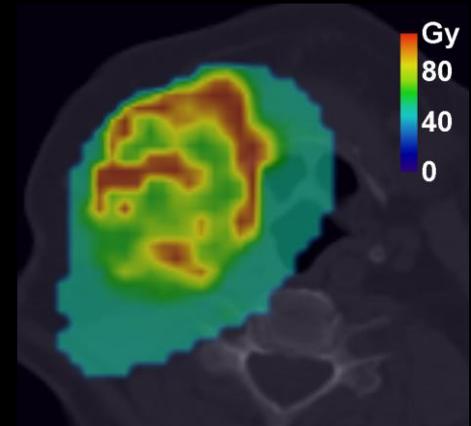

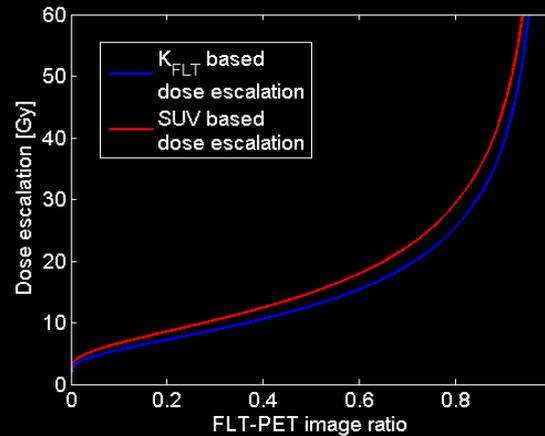

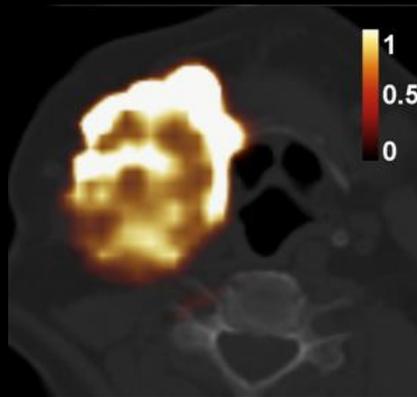

Applications – dose painting

Pre-treatment

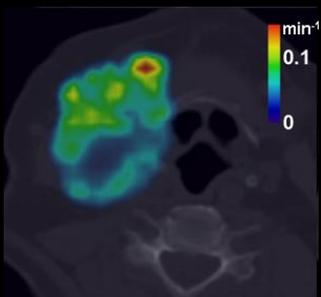

Prescription function

Treatment response

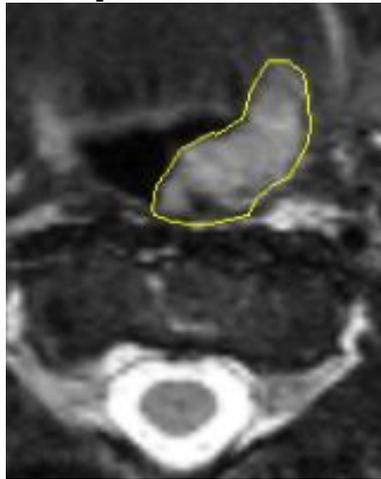

Mid-treatment

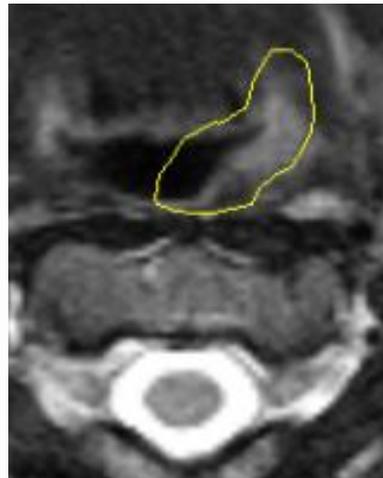

Tumor Regression and Response Assessment

Register Clipbox Correction Overview

Main Challenges

- In room image quality
- Deformable image registration accuracy
- Dose accumulation and interpretation
- Rapid plan adaptation
- Response monitoring and adaptation
