New tools: requests & coordination

Tuesday, October 28, 2008 2:45 PM (20 minutes)

Requests from survey:

- * the base “getting started tools”
- * more resiliency to failures and better diagnostics when things go wrong (such as: use \$! in any error message related to a failed system call)
- * Pan parser for Doxygen
- * a GUI :)
- * A Template Manager GUI, please! It would be nice if you implement hierarchical templates management and automatic importing of them in the configuration database. (from a CDB user)
- * CDB (cdbop) grep fonctionnality, access to dependency information.
- * A tool to display the inclusion tree of tpls
- * package dependencies checker package version compare by rpm algoritm
- * A tool to understand how templates are related and I think good documentation is at least as important as new tools. Thanks.
- * GUI, more ncm-components...
- * Having the possibility to restore a machine configuration to a given date in the past.
- * Comprehensive documentation. Slides are NOT documentation.
- * XSL stylesheets for visualization of node profiles so that they can be viewed in a browser.

Inventory:

Logging/visualisation/debugging:

- * panc logging tools
- * pangraph (obsolete?)
- * checkdeps

Profile generation:

- * comps2pan
- * create_template (for CA RPMs)
- * many at <https://trac.lal.in2p3.fr/LCGQWG/browser/SCDB/trunk/src/utills/misc>
- * groupandpasswd2tpl
