

CMS Virtual Visit from CBPF, Brazil - feedback

CMS Virtual Visit, 24 July 2015

Email from Arthur Moraes, 5 August 2015

Participants

We had a group of 17 physics teachers (high school teachers) who were attending a workshop on physics teaching here at CBPF. The CMS virtual visit was part of the program aimed at presenting the teachers with tools they could take back to their classrooms.

Preparation

We had two presentations prepared to introduce and explain how the visit was supposed to work.

General impression

This was the first virtual visit we conducted here at CBPF. The plan was to split the visit in two parts: one from CMS and another from ATLAS. The CMS visit was a success and the feedback we received from participants was very good indeed. Due to technical problems we could not connect to ATLAS and that was disappointing.

Follow up

This aim was to provide the teachers with directions on how to organize and book a virtual visit for their own schools. We are finish a written report which will be forwarded to the participants and will also set up a web-page with guidance on how they can book a virtual visit.
