Constellation Technologies –Providing cloud computing services to industry

Thursday 5 March 2009 09:10 (10 minutes)

Constellation, a spin out from STFC's Rutherford Appleton Laboratory, is providing cloud computing services to all sectors of industry. It uses technology originally developed under the EGEE programme managed out of CERN and which now runs the WLCG (World LHC Computing Grid).

This talk will cover the various business model options for the technology and as well as showing a worked example of a commercial service.

Presenter: TRIGG, Nick (Constellation Technologies)

Session Classification: The Role of gLite in a Commercial Setting - Now & In the Future!
