repositories

An open access repository is a set of services that provide open access to research or educational content created at an institution or by a specific research community. They may be institutionally-based or subject based collections.

Platform: All (3045) Country: All (3045) Registered between January 1990 and May 2014 filter results show all

Content type(s)

Networkbased data Scientific and statistical data formats Databases other

Country

Canada

Using serial analysis of gene expression (SAGE) and microarrays, we are examining total mRNA populations in all developmental stages, both in whole worms and in specific cells and tissues. In addition, we are building promoter::GFP constructs to monitor gene expression in transgenic worms, focusing on *C. elegans* genes that have human orthologues. Also available are web-based PCR primer design tools, and access to information about our *C. elegans* Fosmid library.

Google

e.g. of repository aggregators

Challenges: interoperability/synchronization

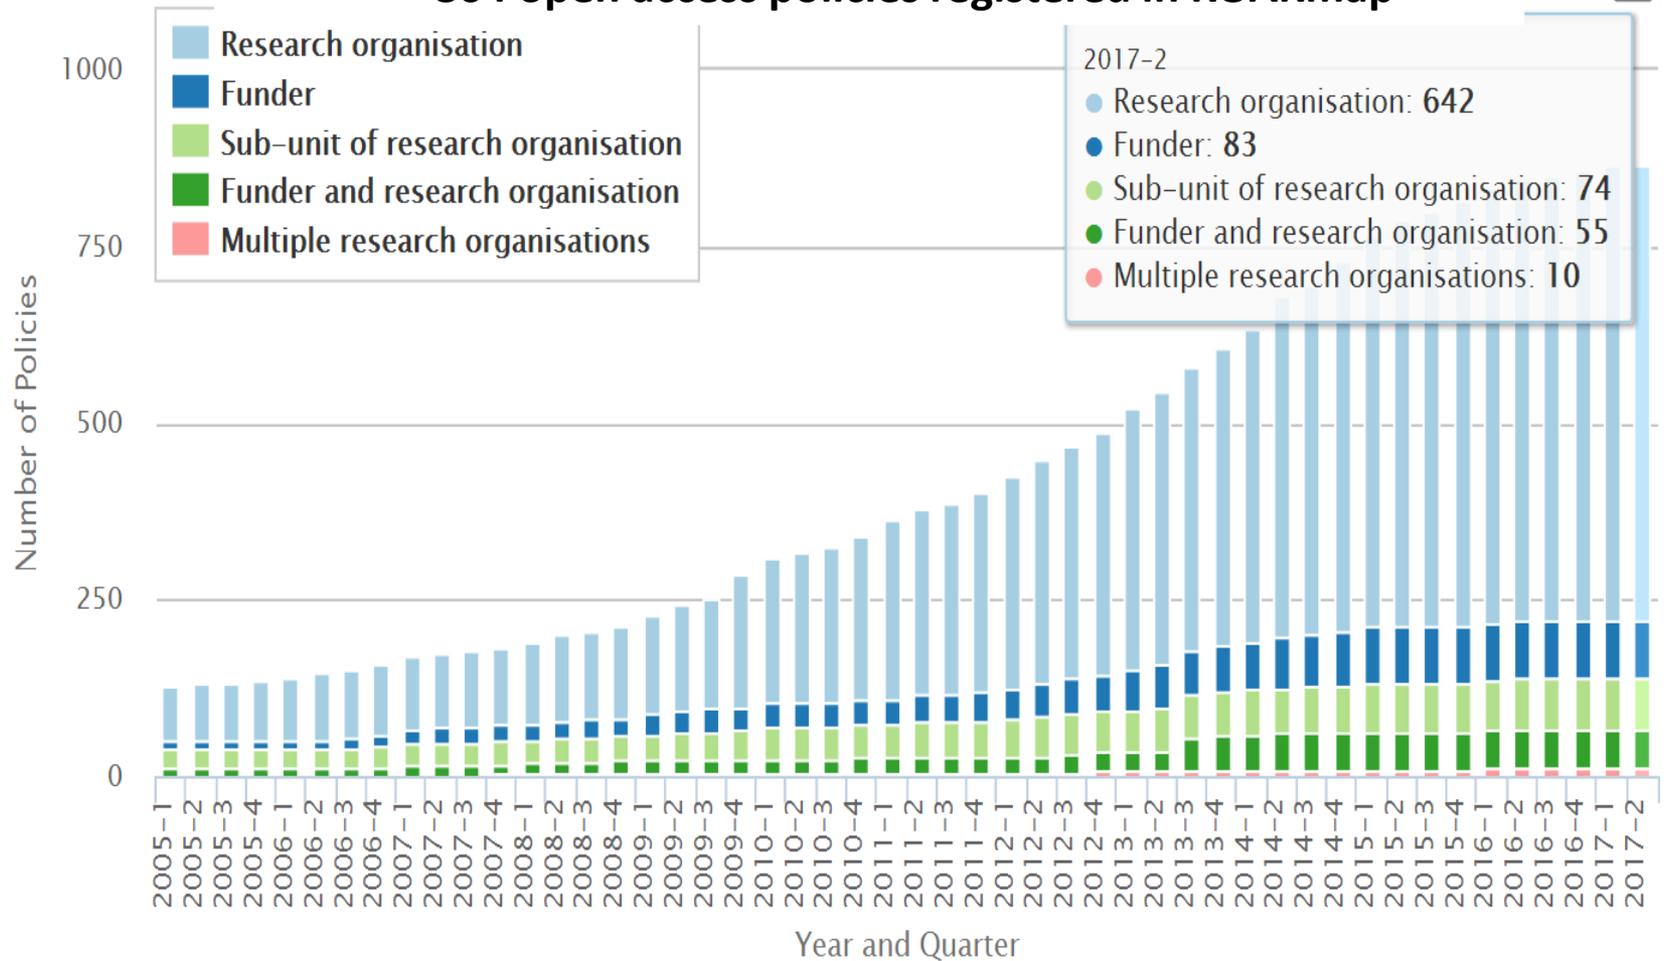

- Institutional repositories
- disciplinary/thematic repositories
- preprints repositories
- data repositories
- Journal repositories (international-regional-national-institutional)
- theses and dissertations repositories

Challenges (cont.)

- Position repositories in the scholarly and research lifecycle
- Open access/open science policies that support repositories
- Evaluation systems that incorporate repositories indicators
- Metadata that describes the quality assessment process of each digital object
- Technological challenges
- Governance and social interoperability

A global inclusive and distributed open
science/open access infrastructure needs policies
that support repositories

864 open access policies registered in ROARmap

produced

Managing scholarly communications as a
commons
is
innovation

Principles of the scholarly commons

P1. The scholarly commons is an agreement among knowledge producers and users.

This means that:

- The commons is developed by its members through their practice
- There is global commitment and participation in the commons' long-term viability and preservation

P2. Research and knowledge should be freely available to all who wish to use or reuse it.

This means that:

- The commons is open by default
- Scholarly objects and content in the commons is FAIR: findable, accessible, interoperable and reusable by humans and machines

P3. Participation in the production and use of knowledge should be open to all who wish to participate.

This means that:

- The commons welcomes and encourages participants of all backgrounds
- The commons is open to all participants who accept its principles
