

ROOTaaS Beta

D. Piparo

A Novel Technology

- ROOT+Jupyter Notebooks = ROOTaaS
 - ROOT As A Service
- Use ROOT from your browser
 - OS/device independent
- **Technology still in Beta phase**

A Novel Technology

- ROOT+Jupyter Notebooks = ROOTaaS
 - ROOT As A Service
- Use ROOT from your browser
 - OS/device independent
 - No need to install ROOT, no need to use VMs
- **Technology still in Beta phase**

How To Use ROOTaaS?

- Connect to `http://plitehp24:8000`
- Input your username and password
- Select one of the notebooks types:

The Page After Authentication

The screenshot displays the ROOT Notebook Beta interface. At the top left is the ROOT logo and 'Notebook Beta' text. At the top right are 'Control Panel' and 'Logout' buttons. Below the header are tabs for 'Files', 'Running', and 'Clusters'. A message 'Select items to perform actions on them.' is shown above a file browser area. The file browser shows a home icon and two folders: 'macros' and 'notebooks'. To the right, a 'New' dropdown menu is open, listing options: 'Text File', 'Folder', 'Terminal', 'Notebooks', 'Python 2', 'Python 3', 'ROOT Prompt', and 'iPyROOT'. Arrows from external text labels point to these elements:

- 'Contains Primer's Macros' points to the 'macros' folder.
- 'Contains Today's Notebooks' points to the 'notebooks' folder.
- 'C++ ROOT prompt' points to 'ROOT Prompt' in the 'New' menu.
- 'Python and ROOT ecosystem' points to 'iPyROOT' in the 'New' menu.

**ACCOUNTS WILL BE DELETED
LATER ON TODAY!**
